Message-ID: <76gb3scoc1@winter.news.rcn.net>
Source record: 91992

I am looking for a BC 1000 or SCR 300 radio setup, with all components, in working condition. I have for trade several Russian Radios, including an R105D unused in the transit case missing only handset, and a few R105M, R108M, and R109M radios only. Looking for direct trade of SCR 300 for R105D, or SCR 300 for three of the M series with each of us paying respective shipping. Thanks,

The TS440SAT has built in tuner, microphone, power cable for 12V, and manuals. Keypad entry is erratic, but works, and main tuning knob needs bushing. Otherwise clean and good working order, ready to go. First $250 takes it, including shipping in CONUS.

Heath PS23A good cosmetically and good working order. First $50 takes it, including shipping in CONUS.

HW100 very good cosmetically. Receives fine, but transmit relays appear sticky. Needs microphone connector rewired. First $50 takes it, including shipping in CONUS.

******

OK, all you e-Bay haters, this ones not listed for auction:

For Sale: Hammarlund HQ-110 Receiver

The HQ-110 is a 12-tube double-conversion (40-6m) amateur-band only receiver covering 160-6 meters. This receiver is in nice cosmetic condition, all electrical functions working and receives signals clearly. With a short (20ft) length of wire stations in AM, CW and SSB were copied on all bands, including local 6M AM!! There is a very minor 60Hz hum indicating the possible need for power supply filter cap replacement. A copy of the original manual is included. Professionally packed in foam wrapping, bubble wrap and double-wall boxed, it is ready to go. Price of $160 includes shipping anywhere CONUS via UPS Ground. Picture (~80K) available:

http://home1.gte.net/pbishop/hammarlund1.html

Happy New Year.....

>think of anything else.

Many thanks to all of you who posted and e-mailed replies.

The cause of the crackly noise (on rechecking everything) was found to
be a double-fault on the mixer capacitor rotor-plate earthing
contacts.

There are two earthing fingers, one each side of the tuning shaft,
that rub on the side of the mounting for the rotor plates. One finger
(the lower one) wasn't making contact at all, but the cause of the
crackle was dirt on the upper contact (it looked clean and lubricated,
honest!). I interposed a thick piece of paper between the two, and
removed not very much gunge, but the problem has now gone away
completely.

Many thanks for your help.

Have a good New Year.

if i recall correctly the radio is a cheaper version of the sx42...
it has a bfo that you can use for ssb but it is a pain, drift, cut back
rf gain, avc off, etc..
it's ok and a lot of fun ...
but not anywhwere near todays standards and convenience..

48. Heathkit XC-6 and XC-2 Converters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-01 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19990101164821.06071.00005447@ng04.aol.com>
Source record: 92039

Not long ago I posted an inquiry as to the current value of these older converters. These were contemporary to the RX-1 (Mohawk). I received a number of replies, and opinions of value ranging from $15/ea, to $45/ea. I also received one offer to buy, at $50 for both converters.

I bring this up again because it relates to the discussion of escallating values, and the pricing listed by The RadioFinder.

Currently on e-Bay the is a single XC-6. Its description is "moderate wear, non-original case screws, and missing the molded Heathkit logo strip. And while the tubes have been tested good, the overall function of the converter could not be checked." The current bid, with the last, and hottest 24hrs of bidding to go, is $112.50!

Setting the price for collectable equipment requires finding the balance point between "value to the seller," and "value to the buyer." While it is an observed fact that goods offered for sale on e-Bay command a higher price than those sold elsewhere, it is also true that an e-BAy purchase means that you can find it now, rather than wait for the same thing to show up on a local swaplist, or at a local hamfest. Additionally, the marketplace for sellers on e-Bay is international in scope, which increases the odds of someone who has a high level of perceived value finding an item for sale.

In all this I take some personal satisfaction in that I set the "value to me" of the pair of converters, in VG cndx, complete and operating, missing no parts, at a figure which I think the e-Bay price will top. So while I did not sell the converters to the party who inquired, I no longer feel like I was "out in left field" as concerns their value.

The lesson to be taken here is not new: Pick a strawberry when you find it. I believe, as another wrote here, that we are still on the incline portion of the value curve, and that prices will continue to rise. And if you think ham gear is going thru the roof, check the market for broadcast radios from the tube era!

GF-11 Transmitter:

Now there's a nifty little transmitter that never quite caught on. Not as much power as the ARC-5, but had a built in modulator and power meter. Band switching with small plug-in coil packages. I suppose part of the problem may have been that the coils were never available at the same time as the transmitter or the receiver (RU-16). Only a couple mentions of either in the Ham Magazines (mostly "CQ") of the 50's.

Hi fellow boatanchors NUTS,

I have just started a WEB page that will have pictures of my SX115 before, during and after its restoration. It can be checked out at:

http://www.geocities.com/MotorCity/Pit/8327/

Right now I have the before pictures but will be adding pictures as she goes.

Right now I am trying to figure out if the SX-115's main cabinet was gloss black or gloss dark gray like the HT-32A and the SX-100 that are in my shack. All indications I have from the old paint on the radio and other WEB sites is that it was a gloss black. Comments please.

Please check out the site and let me know what you think. I have other pages there also with a couple that are not started yet. "To many hobbies and not enough time."

In reality Joel probably provides a good service with those with little or no technical skills and/or large disposable incomes and desire vintage gear. Unlike the majority of sales made here, and other places, he does appear to give a reasonable guarantee (sic). I know... a lot of us will work with the buyer after the fact, but he may go one better. In my case, I asked Joel the price of a Valiant he had listed. Price? $750!! Ridiculous.. you say. Well, yes.. all else being equal, and given that I got one locally in out-of-the-box condition for under $400. Other side of the coin, both on this group and Ebay (sorry about that!!) I previously bought two.. countem' two Valiants that we're... let's be Clintonesque and just say.. the descriptions were "misleading". Great for parts, though. So let Joel cater to the Carriage Trade and the rest of us will slug it out in the trenches. Best of '99 to all! and still looking for that elusive SX-28A...

Looking for 2 or 3 adapters - with "C" male on one end, "N" female on the other.

This is a UG-565.

Will pay cash or have UG-567 - "C" right angle adapters, UG-643 - "C" double female adapter or other connectors to trade.

Please reply via email.

Thanks,

Bill

This I-177 w/ MX-949/U adapter kit truly looks new and even smells new.
It is in the original box and includes all manuals and suppliments.
It will check all receiving type tubes from the 1920`s to the middle
1950`s. $175 shipped.

Next Item:
M.N. Beitman radio diagrams orignal manuals (not reprints). 1926-1938,
1939,
1941, and 1942. In excellant condition.
$50 for all four shipped.

E-mail me direct if interested.

Regards,
Earl

73. Help: HW-101 No modulation on USB/LSB

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-02 00:00:00 UTC
From: djzman@execpc.com
Message-ID: <76luie$7n9$1@nnrp1.dejanews.com>
Source record: 91928

Hi. Sorry if this ends up being posted twice; I haven't seen the first copy appear yet.

I have an HW-101 which I have been tuning up and testing for a while now. Using a dummy load, I was able to get through the relatively simple alignment procedure and the radio seemed to respond as expected. I finally had a chance to string up a 10M dipole and tried out 10M SB. Much to my disappointment, when I use the microphone, I don't seem to get any modulation, the power-out meter doesn't move with my voice. I confirmed with a buddy of mine, who lives a couple of blocks away that he only hears a carrier; maybe a faint voice. Here are some other details. Any hints/help that anyone can provide would be most appreciated.

o Using "Tune" setting, I can get approximately 100W out o If I really shout into the microphone, I can get a very small < 1-2 W) deflection on the power meter o I tried swapping the V1 tube with another one of the same type and the behavior did not change o I connected the microphone to an audio amplifier and it seems to function properly o Both of the relays seem to be engaging when I press the PTT o I tried another microphone, same result o The receive seems to be frustratingly (I hear a lot of strong signals and can't answer) ok o I measured the PS voltages as recommended ~300, ~150 OK o The AGC voltage at the external AGC input (before the cap) is at about 85 volts (I'm not remembering this clearly), 75 with the PTT pressed o The carrier null procedure seems to go fine, although the pot may be a little dirty/old. I saw a little jumping around.

That's about it. I'm not too up on tube "technology" but am an Electrical Engineer with some troubleshooting skills. I only have a digital VOM here at home. I also have the manual with complete schematic.

Anyway, I would be very grateful for any hints or experience with this radio would or this type of problem.

Thanks in advance,
Dan, KB8STT

Hello--Name here is Ted N8GPQ in snowy Ohio--Have you checked the voltages around V1 and V2--I had the same problem and several resistors around these tubes had changed--You could check resistors going to V1 and V2 also with your VTVM--Check diodes in Balance Modulator circuit also(forward bias vs reverse bias). These could also cause your modulation problem--Don't know if I helped but I have worked on 101's before and the above problems are very common.

```
This is a dual beam oscilloscope with several amplifier modules. Two
are used at a time since the CRT has two beams.
It works well but could use calibration/adjustment and contact cleaning.

I have the service manuals for the 565 and the 3A1's.

Plug in modules:
Type 3A1 - Dual trace amplifier
Type 3A1 - Dual trace amplifier (needs repair)
Type 3S3 - Sampling probe unit (missing probes)
Type 63 - Differential Amplifier
Type 3A3 - Dual Trace Differential Amplifier

I've paid $200 for the unit and all it's components including the
manual. I'd like to recover most of the money. Please make an offer.

-Jamey

What kind of microphone are using? Those old rigs were designed to work with a high impedance (50K ohms) crystal microphone. If you are using a low impedance dynamic microphone you will not be generating enough voltage to drive the amplifier. I used to use an old CB amplified desk mic with good results.

Hi boatanchor NUTS,

I have setup a WEB page which will follow the progress of the restoration of a Hallicrafters SX-115 that I just acquired. It can be followed at:

http://www.geocities.com/MotorCity/Pit/8327/

I will be updating it as I progress.

Right now I am trying to determine the cabinet's original color. I believe it to be a glossy black. I have an SX-100 and HT-32A that are a glossy gray so am confused as to the true color. The old paint which seemed to be original was glossy black. Anyone give me any input into this?

Take a look and let me know what you think.

Ron WAï¿½KDS/7

Hello All - Happy New Year!

Thanks in advance for any help.

I have a Hallicrafters speaker - I believe it's a R-47 which appears to be the "mate" to the SX-115. It in good to very good condition - scratches in paint - doesn't have original connecting cable.

Question is - What's it worth and is anyone interested?

Thanks & 73

110. Help needed with SSB convertor project

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-02 00:00:00 UTC
From: "Tom (The other one)" <badger@telalink.net>
Message-ID: <3Vhj2.912$Vk.1372388@news1.atl>
Source record: 92061
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Can anyone help with this project?

The past two or three years I have posted to various newsgroups
and lists about this receive SSB convertor I found several years ago.
This is my annual posting, as none of the previous postings got even
a snide remark. :-) I did take some photos -- digital, and not too
detailed --
of the unit this time if it would be any help. Please take a look at the
site
below if you have or may know of someone who could help find a diagram
for this unit. It really would look nice in my rack with my R-390A's. I
already
have a CV-591, but his one must be better because it is twice the weight
and has more tubes.... heehee.

At any rate, take a peek at the site and see if it looks familiar --

http://www.telalink.net/~badger/mars/mars.html

I finally got the courage up to retube it today! It is dead... :-(Has a
working power supply, best I can tell, and I did check all the tubes before
putting
them into the unit. Guess it is time to go a-signal-searchin' with scope and
generator. Just the thing for a rainy weekend.

73 and thanks for any help. Please email any comments rather than
cluttering the newsgroup, or at least email me a copy of your post...

Source record: 91871

Hi,
I think the microphone connector wiring is shorted as it is very common to have the shield side melted into the inside (hot side) wire. Check with the VOM for resistance value. If it is not shorted, put your finger on the hot side of the microphone connector while the PTT line is shorted to the ground while th emic. gain is set at amximum. If you can hear a loud hum from the monitor receiver, it is O.K. means the mic. is bad.
Good luck.

125. Swap useable computer debris for interesting radio stuff.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-03 00:00:00 UTC
From: BOB DUCKWORTH <bob@atl.org>
Message-ID: <368F36BE.5445@atl.org>
Source record: 91876

I have a few surplus Compaq Deskpro Computers and am interested in swaps for radio stuff. I like older Communications RX and am also looking for a blonde Altec bookshelf speaker, a decent, high end turntable and cartridge, and a pair of clean triode based audio amps in the 5W range.

All systems have been tested with Linux and install and run smoothly.

The Deskpro is from Compaqs commercial line and is much nicer than most of the 'consumer grade' equipment of similar spec.

Deskpro 466:
This is a 486-66, 16meg, 3.5" floppy, 1.3gig IDE, 3 16bit ISA slots. Sound built in. 1meg video (expaandable to 2meg) built in. Inclused Compaq keyboard, mouse, and 14" Compaq color SVGA monitor. RedHat Linus 5.2 loads right up with no special effort. 42lb.

Deskpro 575:
This is Intel P75 based. 5 16bit ISA and 2 busmastering PCI. A max of 5 slots may be filled. 16meg, 700meg, 1meg built in video is expandable to 2meg. 3.5" floppy. Has 10bT Ethernet built in. Sounds like the typical IC-745 PLL problems. From what I remember, Icom had a kit you could get some time back that would replace the cheap plastic trimmer caps in the PLL with better grade ceramic trimmer caps. I had an Icom IC-701 that did the same thing.

Yeah Bill this episode reminds me of what they call "Express Post" in
Australia, it's a joke.
I sent two letters to the exact same address, both posted at the same mail
box at the same time (This was actually the post office itself) the onlt
diff was that one was "Express Post" (Suppossed to be next business day
delivery, I posted on a Monday) and the other just your stock standard
stamp.
No prize for working this out, the standard letter got there 4 days, 4
bloody days ahead of the express post letter..... efficiency!!!

131. NEED MANUALS for 3 rare comm receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-03 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19990103121741.25125.00006453@ng104.aol.com>
Source record: 91882

I have the following radios for which I need manuals:

1) Radiovision COMMANDER ham/GC tube radio from the 50s

2) Silvertone/Sears STANDBY General coverage receiver. (This looks at first as it might be an RME-70, but it different completely...copper chassis etc.)

3) Anritsu R-11 tube receiver...functionally/design might be 51J clone...even has a PTO can like the Collins. 30 bands.) This was the tube predecessor to the RG11 shown in Osterman's book)

And a non-BA piece:
Danish Marine Communications (Dancom) R-203 solidstate receiver...early 80s digital rackmount unit. Uses crystal-bridge type filtering, where the crystals defne the upper and lower limits to the IF passband, which is 580 kHz. For example the 250kHz position has a crystal at 580.000 and 580.250 kHz, while the 1000 Hz wide filter setup uses two cystals at 580 and 581 khZ.
Has model 5001 power supply.
Any ideas?

Matt
Can anyone help?

In article <368999AF.7430@bellsouth.net>,
kb5wwo@bellsouth.net wrote:
>

It seems the high prices may be justified if the Radiofinder was selling museum quality collectibles or perfectly restored (mechanical and electrical) radios. In that case, I can agree that he is providing a "value added" service and some sort of price increase is reasonable. In other words, you can't compare the cost of a unit that you pick up at a flea market that doesn't work correctly with one that is fully functional as it was when new.

On the other hand, after reading his website, it looks like the Radiofinder doesn't really come from a technical background. If this is truly the case, I have to wonder if his skills warrant the high prices he charges. If he is just "JS'ing radios back together any old way then he is probably just a rip-off and his prices are a joke.

AV

I have to agree with you guys,these people are a joke.He had a CE 100V

Message-ID: <76of3b$6e2$1@nnrp1.dejanews.com>
Source record: 91887

I have a Collins 70E-15 PTO for sale. I have never fired it up but my recollection from many years ago is that it was represented as being a workable unit. It doesn't appear that the star washers on the "can" have been moved which may mean that in spite of the broken seal on it (old age?) it hasn't been opened but WHO KNOWS?

I'm asking $50 + shipping & insurance which I would think would be less than $8 or Priority Mail.

You may view several pictures of it at:

http://www.geocities.com/Heartland/Ridge/7463/51J/51jpto1.jpg

http://www.geocities.com/Heartland/Ridge/7463/51J/51jpto2.jpg

http://www.geocities.com/Heartland/Ridge/7463/51J/51jpto3.jpg

By the way, I also still have some other 51J parts left from my parts unit. IF cans, relay, switches, "protection bulb", crystals, crystal socket assembly. Ask, I may have it. However NO front panel, NO covers and NO dial drum--sorry.

Hey, THEY DON'T MAKE THESE ANYMORE! <grin>

137. Articles on the AWA web page + Calendar of Radio Events

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-03 00:00:00 UTC
From: John Dilks <oldradio@worldnet.att.net>
Message-ID: <368FB217.29A0@worldnet.att.net>
Source record: 91888
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Articles on the AWA web page + Calendar of Radio Events

To all,

The AWA Web, Page_2, has been updated for January 1999. It now
appears less cluttered.

http://www.ggw.org/awa/page_2

Additionally, there are now two AWA Old Timer's Bulletin (OTB)
articles there, complete with photos. I tried to keep the feel of the
OTB in the layout. I think you can print the articles on a laser or ink
jet and they will come out ok? I'll check from work tomorrow. Anyway,
they're on the web. Spread the word. More to come. (It takes about 3
hours to do an article, depending on the number of photos and tables.)

I broke-down and bought my own scanner so I can add OTB pages from the
past. This should be an attraction to radio buffs, and increase our
membership. It is much handier. Now I don't have to ask permission
from my kids. (My, how the tables have turned.)

The "AWA Radio Events" calendar is becoming very popular. I have
received some nice comments on it, and some new listings have arrived
due to its being there. I'm hoping this calendar will become "the one
to go to" for antique radio meets. This too will bring new people to
the AWA.

147. Questions on Hammarlund SP-600 VLF receivers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-03 00:00:00 UTC
From: Dennis Gibbs <dgibbs@rational.com>
Message-ID: <368FDE2A.54B4@rational.com>
Source record: 91898

Hello everyone,

I have an opportunity to purchase a Hammarlund SP-600 VLF model in excellent-mint condition. The receiver is not local to me, so I cannot examine it personally before making the purchase. I would like to determine when this unit was made. Specifically, I'd like to find out if this unit has the infamous black paper capacitors in it.

I spoke with the person selling the receiver on the phone. There are no definite date codes that he could find. There is no plate on the tuner cover like on the traditional SP-600 models. He could not see a date code on the power supply can electrolytic. He THINKS he sees a date code on a capacitor, but he can't tell whether it is 9-57, or 9-67.

There is a sticker on the back of the unit with a number 55752052, but this doesn't sound like an SP-600 serial number. There is something written on the side of the chassis that looks like 75-820-I2/5, but it's very faint. The coverage of the receiver is 10-540KHz. He has an original manual for it, that says it's a VLF-31 model, but we don't know if the manual matches the receiver.

My questions are:

1) Assuming it's a VLF-31 model, when were the VLF-31s made? Do they have
the infamous black beauty caps in them?

2) What other VLF versions did Hammarlund make, and when were they made? Which ones had the black beauty caps in them?

3) Assuming MINT condition cosmetically and electrically, how much should
one of these sell for?

I've seen various lists of the versions of SP-600 receivers, but I still can't seem to pinpoint when the VLF versions were made.

Thanks for any help,

Dennis Gibbs

just purchased from Drake ($38.75 + shipping). Includes original owners
manual and SWR calculator chart. Works perfect $75 + shipping or trade
for MFJ 300 watt tuner (945D or 949D or E models).

Extra Drake W-4 meter movement faceplate and snap on cover in
excellent condition $10 + shipping or best offer.

R-4B crystals to cover 11 meters (CB) for sale. They work as
far as I know, but I have no use for them as I am not a CB'er. $6.00 each
+ postage.

I also have 2 crystals for FT-101 series radios for 11 meters
that I pulled from radios I used to own. $6.00 each plus postage.

E-mail Mark KB4AEP at crslex@iglou.com
Thanks

Trouble shooting techniques are called for here. Have the manual and the schematic? Have an audio generator?

Apply a tone to the mike input and look for indication of power out (cheap trick for mike amp operation). No audio generator? touch the mike input connection with your finger, another cheap trick that will click and put 60 cycle hum into the audio input line.

Still dead? Here you will need that audio generator to put a signal on the output side of the mike amp.

Just follow through the stages in this manner.

Most likely you will find the problem in the mike amp circuit. Bad tube, component, or wiring (mechanical).

Doing this from memory, haven't seen a 101 in years - great rig though. If you have an old 73 magazine - forget which one - there is a circuit for RIT which can be added and made to look like it grew there.

Good luck.

This weekend I bought a Hallicrafters S-38. This is the 6 tube version which I think is from 1946. To maintain its collector value (if any) should I repalce all the paper capacitors as is recocmmended, or should I leave them? It works now, and should need only cleaning.

Also, where can I get schematics?

I am new at this, so any comments will be appreciated.

Thank you both very much for the replies. I'm writing from very, very snowy Waukesha, Wisconsin: 15 inches today!

Marty, the microphone that I am using is one that is actually shown on page 115 of the manual for the radio (although it's not called out my Model number?): EV Model 638 Dynamic Desk Mic. I did actually try another microphone that I borrowed from a friend who said that it had tested good, although the connector was very loose and it looked like it had seen better days. I did notice that the connector wiring on my mic was not done too well, so I redid it. Probably a good last step is to take my microphone up to my buddies and confirm that it works with his working Heathkit radio of approximately the same vintage. I really don't know if this mic has been used successfully with this type of radio or not. Maybe it is a compatibility problem.

With regard to V1, the audio amp tube, I did switch it with another in the radio and got the same exact behavior. I was expecting that if the tube was bad that at least the symptom might move or change somehow. Thanks Ted for the suggestion to check on the supporting components around V1. I'll definitely do that. I did check the +300 and 150 VDC power supply voltages, but I'll check the voltages close to V1. Also there is a Hamfest this weekend here and I may look for another V1, just for good measure.

I suppose that I may need to get ahold of a scope and start tracing through the signal paths. The radio seems pretty straight-forward.

Do you think that maybe the AGC circuit/voltage is somehow hosing the output?

All this fun will have to wait for a ton of snow to be moved tomorrow ... maybe it'll blow away in the 50 MPH winds ...

Thanks again, I'll keep you posted, 73,
Dan, KB8STT

Dan: No real technical advice, but just a note of moral support.
Hang in there with the HW-101! Its a fun rig and you'll really enjoy
it once you get it going. I have one sitting in front of me.

One ham historian writes that the 101 is the most widely produced ham
transciever ever made. I believe him. As you've seen, there is an
enormous bank of experience out there on this rig.

A couple of tips:

-- Make sure the main tuning dial mechanism is adequately lubricated.
They can get dried out - this results in "jumpy" tuning.

-- Watch out for the high voltage!

Good luck, 73 Bill N2CQR

Hello,

I have a Shure 444, Drake 7077, D-104, and an electeret mic that I
built into a Shure 444 with a bad mic element. After running many
different audio checks with many different stations, I have had the
best audio reports with the electeret microphone. It cost <$10.00 in
Radio Shack parts to build. If interested in the design, drop me a
note via e-mail.

178. Manuals for Rare HF receivers needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-04 00:00:00 UTC
From: radiomatt@aol.com
Message-ID: <19990104063444.08527.00004987@ng34.aol.com>
Source record: 91823

I have four pretty rare tube type HF Communications receivers for which I need manuals:

1) Silvertone/Sears "STANDBY" receiver. Looks a lot like it might be a RME-70, but clearly an original. Tube unit from early 50s

2) Anritsu R-11 tube receiver from Japan. Looks like it might be a distant cousin to a 51J Collins radio...complete with PTO. (The later RG-11 solidstate version is in Osterman's book)

3) Radiovision COMMANDER receiver (GC, with ham bandspread)(in Osterman)

4) Siemens E-311 18 tube radio (3 tube types!!). Fascinating set; mine works from 12 to 18 MHz, weak elsewhere). Need alignment instructions in English.

AND TWO SOLID STATE RADIOS:

Scientific Radio 501-6 six channel fixed HF set
and
Dancom (Danish Marine Communications) R-203

CAN ANYONE HELP WITH THESE?. Certainly the Silvertone should have had a Riders, or Sams on it? Or some other widespread reference.

Will pay copy costs and mailing costs.

Please E-mail

73s & Tnx

vk- KB3PT wrote in message ...
vk- >Thought I'd share a lesson I just learned (the hard way) regarding
vk- >the use of Priority Mail and U.S. Postal Money Orders as payment
vk- for radio
vk- Yeah Bill this episode reminds me of what they call "Express Post"
vk- in Australia, it's a joke.
vk- I sent two letters to the exact same address, both posted at the
vk- same mail box at the same time (This was actually the post office
vk- itself) the onlt diff was that one was "Express Post" (Suppossed to
vk- be next business day delivery, I posted on a Monday) and the other
vk- just your stock standard stamp.
vk- No prize for working this out, the standard letter got there 4 days,
vk- 4 bloody days ahead of the express post letter..... efficiency!!!

In the UK it's been observed that envelopes which are large but not heavy get priority. Probably because they won't fit through the automated system.

Conclusion: Put everything in a huge envelope, keeping below the price weight break.

Actually, the TR-7 takes high impedance and low impedance. It depends on which pin you use as the input on the microphone connector. If you need the specifics, I can provide them.

>good high impedance mic for these older rigs?

John,

All of these should work well with your Tempo One:
Astatic D-104, with or without preamp
Shure 444D (set selector to High Z)
Turner 254C (I have one of these on a T-One myself)
Turner CB mics (Plus 2, Plus 3, Super Sidekick)
Since these were all available LONG before the T-One was made,
they are "of the correct era".

73,
Dean / K5DH

FWIW, I install axial leaded film capacitors in the old paper capacitor cases after removing the old guts. I use the 'off white' hot melt glue to seal the ends of the cap cases and add the date (non-Y2K compliant) to the outside of the case to indicate it has been re-worked. The re-worked caps look good, but have the outer thick wax missing, so they are not prone to dripping or collecting dust.

Schematics and caps are available from AES and others; see the FAQ.
AES is online at www.tubesandmore.com

Why is it so difficult for you price cops to understand that
every price you see on here is an *asking* price? The seller
is *expecting* you to email him a counter-offer. This is called
"bargaining" - you apparently don't know how to play the game
so you instead whine in public. Doing so makes you look silly.

Source record: 91838

First, I am not in the business of selling or fixing radios for profit.

If I were and had 390As available for free, I still would have to
charge for the time I spend fixing/aligning them. It can easily take up
to 50-100 hours to get one working properly and make it look nice.

I don't understand why someone that makes his living from repairing
radios should not be allowed to charge for his services more than
minimum wage or fair market value.

If they are selling, it means that the market values their services,
Good for them.

Maybe the government needs to regulate this business setting "proper
fees" for repairs.

Yeahhh, let's move to the SOVIET UNION ......

Regards,

Francesco

Where are you now Jeffrey? /7 eh? F7, EA7, or plain old W7?

Well, anyway, there are traders and then there are those of us who lean to the western method of firm pricing. Each forum needs to make clear which it is. Do I assume firm price if it doesn't say, or do I assume that a counter bid is expected. I've gotten thrown out of stores by doing that in the US, but not in Europe or countries with Spanish heritage. Radio Finder is--- U. S., or European, or? See why there is confusion?
Crazy George

<snip>

First, get a scope, borrow one or drag your rig into work, etc. Check the audio going into the balanced modulator from the speech amp, I believe it is a 12AX7 with the second stage acting as a cathode follower. There is a 10 ufd electrolytic cap across the cathode resistor that typically dries up and dies. If you have audio into the balanced modulator, check each diode in the BM using a vtvm (measure the forward and reverse resistance) I have had several HW101's and have had to replace caps and diodes. Finally, check the output of the BM using the scope, it should show 3393 khz rf whose amplitude varies as it is modulated.

204. Crosley 150 cabinet NEEDED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-04 00:00:00 UTC
From: marty@netstogie.com
Message-ID: <syak2.26$pA4.5423882@IConNet>
Source record: 91849

This is about a 1932 dome-top (cathedral?) table superhet radio that had 3 57s (rf, 1st det. / mixer-osc., if), an 85 (2nd det, 1st audio), 43 (audio out), 80 (tld - twin light-emitting diode / rect.)

I o'hauled it's chassis 15 yr.s ago & boxed it up while owner sent cabinet out for refurb.

Well cabinetmaker vanished & now the chassis is wanting.

I have cabinet hdw. like little baffle board (for 6.5" Magnavox dynamic spkr.), knobs, & dial 'keystone' escuteon.

FYI, there were three shaft holes: tuning, volume, tone. Tuning was top of the triangular knob pattern & 'keystone' dial escuteon sat above.

This thing belongs to a close friend & I sure hope someone out there might help.

Thanks all,

Marty

205. FS HAMMARLUND HQ-170 w/clock

Newsgroup: rec.radio.amateur.boatanchors

For Sale:

A very nice Hammarlund HQ-170C (factory installed clock). Radio works well, receives amateur bands 160m-10m, SSB, AM, CW. Variable selectivity, notch filter, etc.

Front panel and case in excellent condition, better than 9 out of 10 with the exception of a chipped knob (fine tuning). All knobs original, all fully functional. Chassis very clean.

Original manual included. This Hammarlund is in great overall condition.

Asking $235.00 plus postage.

Thanks, Al

Ever consider coming to the darkside?

Just slide that old dogeared transmitter to just below the 40 Meter band and hooked up an antenna and turntable and start discovering the fastest growing fun thing to do next to the 'net.

Shortwave Broadcasting from your living room!

Join the crowd and start running your own radio station. Presently the band is crowded with religious nuts and Rush clones but there is still plenty of room for stations that broadcast socialist news (especially with all the layoffs in the good ole USA). Communist views are especially welcome since a number of stations have dropped this format...

You might even sell commercial time and start a nice part time occupation.

Many a nice Boat Anchor has turned to a life of crime... proving these old rigs are still worth something...

PP

Here is some more data on these units, what they contain and perhaps shed a bit of light on some of the goodies inside the modules

1. Power Amplifier module 2-30 Mhz with a pair of 4CX250FG power tetrodes, fully automatic tuning across 8 bands. Contains roller inductor and a good selection of high powered ceramic NPO doorknob transmitting capacitors and a motor operated band switch. Air systems sockets for the 4CX250 tubes, ad a variety of passive components.

2. RF Translator module, Contains the Collins K4/K9 2.5 Mhz-3.5 Mhz

PTO and autopositioner assembly, receiver upconverter/downconverter sections with tubes, turrent assemblies with associated Phase locked oscilators, RF amplifier tuned circuit turrents for receiver section, RF Amplifier turned circuit turrents for transmitter Driver amplifier, Mixers,

transmit and receive to first tunable IF and slug tuned rack system for first IF system.

3. Master Clock time base module, outputs on 1 Mhz, 500 Khz from a tcxo 3 Mhz oscillator, 1E-6/month aging rate

4.IF Translator Module contains 500 Khz SSB IF system, for both SSB generation and reception, includes balanced modulator and product detector, has two Collins 500Khz mechanical filters, 2.4 Khz USB and 2.4 Khz

LSB.

5.AM Audio module contains a 500 Khz IF system for AM and audio amplification for all receiver modes. The unit contains an envelope detector and a 6 kHZ Wide 500 Khz Collins mechnical filter.

6.HVDC power supply, takes 28VDC and produces 2000VDC at 500 MA for the final amplifier and lower voltages for lower level tube sections in the transceiver

7.Khz Stabalizer contains control logic and a pair of Collins 250 Khz narrow filters (crystal I presume)

8. Power Regulator module (passive regulator)

9 Transmitter Control module. Chopper stabalized servo amplifier that controls the automatic RF tuning in the RF amplifier.

10. Mhz stabalizer module (Misc components to lock the first conversion Local Oscillator on various band segments

11. Divider module.. Random logic to generate various pulse trains for the rest of the unit's synth system

12.Panel Meter 2 ma fs.

13 RF T/R switch

14 Tiny blower from hell--cools entire radio including the two 4CX250FGs, about 1.4 inches in diameter, 115vac/400Hz

215. Harvey Wells T-90 Transmitter

Anyone out there with the matching R-90 Receiver?
I have the original manual also for the T-90.
I do not have an original power supply.
Had used a homebrew supply until cap blew.
Looking for others with Harvey Wells equip. or interested in this one.
Will have picture in a week or so.

Hi Evan,
Thanks for the info. But I was also correct. In my book, factory ship with Hi-Z, but you can also modify it by jumpering the 680 ohm(R356) resistor to the GND. I have 3 TR7's and they are all made with Hi-Z.
Wish you a happy 1999.

>>To maintain its collector value (if any)
>> should I repalce all the paper capacitors as is recocmmended, or should I
>> leave them?

Replacing the paper capacitors is a good idea for *functional* reasons if you intend to use the set.

I recently restored an S-38. It's a neat little set, but there are plenty of them in circulation, and it was an entry-level radio when new. I think many collectors would just go ahead and replace the old caps with new ones. That's what I did.

Whether you spend the extra effort to hide the replacements inside the old paper shells is a matter of personal taste. I have restored lots of radios and wouldn't go to that length unless the set was very, very special. If you want to do it for fun or the sake of authenticity, go ahead by all means. But I don't think that factor would affect the collector value significantly. It's not a terribly valuable radio in the first place. And how often do people take radio chassis out of the cabinets to inspect the insides? ;-)

Cheers.

Why not just buy them from the James Millen Company??? They seem to be at the same address from which I ordered my GDO in 1962, and my LF coil set last year. Sorry, I'm in the process of a move and all my files are packed. It was the same address on my operators manual, though I got it by putting "james millen" in the alta-vista search engine and following the thread.

You should get FM within the standard FM broadcast frequencies (88-108 mhz).
You should also be able to pick up the sound for a couple of TV channels
somewhat lower in band 6 -- I forget exactly, but the channels are something
like 4 and 5. Other than that, I don't think there's a lot to hear in those
bands, particularly in AM mode.

Your FM might benefit from tweaking the alignment, but that's not a job for
the faint-hearted. If you can get good reception as is, I'd leave it alone.

Cheers.

Phil

P.S. Matching speakers for the SX-42 are scarce. If you can find one, you
may end up paying almost as much for the speaker as you did for the radio!

Dennis:

The SP-600-VLF-31 was first contracted for production in December 1954. There was also a VLF-38 contracted in March, 1961. The SP-600s produced after around 1954-55 used ceramic disc caps in place of the black tubular types. There is a good chance that the VLF-31 uses the ceramic caps, but I am not sure. If it was made in 1957, it should be OK. I have no idea about the going price for the VLF models.

I have compeletely recapped a SP-600 before and it's a bear of a job, but it can be done.

Best Regards,

Ed

Thanks to all for your replies, and (for now) Ted, N8GPQ gets the prize. Turns out that R1 had "changed" from 100K to about 500-600K, and R2 to 300K from 150K. I usually think of resistors as kind of stable, but I guess after 30 yrs something is bound to change. I'll definitely file the rest of the suggestions (including Tim's new ones: cap's and diodes) away for the inevitable next time.

So, anyway, I replaced R1 and R2 and I'm on the air!

Again, thanks and maybe I'll hear some of you on 10M phone, 73,

Dan, KB8STT

PS One procedural question: should I now "cancel" this message or does it get automatically archived and deleted after some time?

I wasn't gonna say it, but since you brought it up, YES, the guy is obviously trying to raise enough cash to buy the Taj Mahal and has decided that he will find enough suckers among the older and perhaps less-mobile amateurs who long for the older rigs, but can't go to the hamfests and buy them for $50 and then sell the same thing for $500 like he does!

As W.C. Fields said though, "There is a sucker born every minute!"

p.s. Please turn your off your CAPS LOCK, OM!!

Hi Ed Brown.
There is an old saying IF IT WORKS DON'T FIX IT.
Leave well enough alone.
I have a copy of the Sams photofax for the S-38C. It should be close enough.
If you need a copy let me know.
If it is a S-38 You need to get a copy of sams folder 3-7 (that is folder 3 article 7 in the folder) if you have the S-38B you need folder 121-7. If you have the S-38 C you need folder
190-4. You can obtain a folder from Vintage Electronics. com . When you place your order tell them that I referred you.
Good luck and have fun with the radio.
73 de Mike Tyler, K6STU.

Does anyone know of a shop that can replace a glass front on a mid 1960s meter? Has 2 1/4 inch round glass front, with metal rim that is pressed on.

Would prefer San Francisco area, but can ship for repair.

Thanks to all, please reply directly.

Randy

John:
Excellent job, ... and all schematics are very readable (my figure of merit of a good web site). Please continue to include past articles. I subscribed not too long ago, and really miss to opportunity to read past articles. Unfortunately, no OTB Review (like QST View) is available, and not many past issues can be purchased.

Um, I think it is "if it ain't broke, don't fix it" and just because it works, doesn't mean it isn't broken. Often I have seen sets in 'Antique' malls with the note "works, but smokes". Any newly acquired tube equipment should be checked for electrically leaky capacitors before long term use, since a faulty capacitor can cause irrepareable damage to the equipment while showing only subtle symptoms easily overlooked by someone unfamiliar with the operation of said equipment.

249. VTVM and VOM difference???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-05 00:00:00 UTC
From: Paul <NoSpam@none.com>
Message-ID: <3692369D.2E90D600@none.com>
Source record: 91748

Hi all,

Please excuse the fake Email address - I'm visiting, and don't want to tie up the persons computer with my Email - so please, if you can help, reply here to the news group - thanks.

I'm just becoming interested in boat anchor gear, and I've noticed that most of the manuals call for a VTVM for certain aspects of a repair.

It would appear as though the measurements called for can all be done with an everyday VOM ??

Is this just a nomenclature difference - i.e. "old terminology" (VTVM) and new terminology (VOM)?

Thanks for any pointers.

Paul

250. Re: VTVM and VOM difference???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-05 00:00:00 UTC
From: j.m.franke@larc.nasa.gov
Message-ID: <j.m.franke-0501991136250001@franke.larc.nasa.gov>
Source record: 91749

It is a matter of the meter loading the circuit. A typical VTVM has an input resistance of 10 Meg., independent of selected voltage range. VOM's are rated in terms of Ohms per Volt. A 20,000 Ohm/Volt VOM will have a input resistance of 100,000 Ohms on a 5 volt scale and 1 Meg. on a 50 volt scale.

Hope this helps,

John

251. Re: VTVM and VOM difference???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-05 00:00:00 UTC
From: "James L. Griffith" <griffithj@ricks.edu>
Message-ID: <369241BC.F1D4082F@ricks.edu>
Source record: 91750

A VTVM is a high impedence device. A VOM is a low impedence device. A VOM tends to load a circuit in measurement giving un accurate readings or, in some cases stopping the function of the circuit from the VOM loading. A VTVM uses the high impedence input of a tube to keep form loading a circuit and giving accurate measurments. Even digital VOM of today in some cases can load a circuit, where the VTVM can step right in a not have a problem. An O-Scope and VTVM are right in there togather as far as loading. One gives an accurate graphic look and the other an accurate analog look. Both with minimal loading to the circuit. A VOM won't do that.

Paul;

VTVM stands for 'Vacuum tube voltmeter'; VOM stands for 'Volt Ohm Milliammeter'

A VTVM is a meter that uses vacuum tubes on the input to achieve a very high (10-11 meg ohms) input impedance. This helps minimize loading of the circuit under test by the meter. The higher the impedance of the meter, the less the meter itself will effect the actual readings.

The modern equivalent of the VTVM is the FET voltmeter with FETs replacing the tubes.

Digital meters are also very high impedance, but are not very good when aligning the stages in a radio as it's hard to see the peaks/nulls with digits counting up/down.

VOM's are fairly low impedance meters (50,000 ohms/volt or less) so are not generally suited for radio alignment due to the excessive loading they present to the circuit under test. They are good for passive testing of components like resistors and diodes, and verifying power supply voltages, etc.

It's not just a nomenclature difference for old/new terminology.
VTVM stands for Vacuum Tube Volt Meter and VOM is suppose to
mean Volt-Ohm-Miliammeter. The difference between the two is that
the VTVM has a high input impedance, usually in the range of
11 MegOhms per Volt. A VOM will usually have an input impedance of
20 or 30 KiloOhms per volt.

A VTVM was usually specified because it exhibits less of a load.
on the circuit under test. and would give more accurate readings.
In some instances, if you used a VOM instead of a VTVM you might
not get the reading you were expecting. This is especially true
when you are working with high impedance circuits.

A VOM might be specified when the loading caused by the meter,
is not very important. And, in that case you could use a VTVM
or a VOM.

Over time, the vacuum tube front end, for a VTVM, was replaced with
a FET front end, but they were still referred to as VTVM. These
days, when someone refers to a VTVM, they are just trying to
indicate a high impedance volt meter.

Most people these days have opted to buy a Digital Volt Meter,
although I'm not one of them. The DVM offers the best of both.
If you have a good brand, the input impedance is very high
and can be used anywhere a VTVM or VOM is specified.

I'm sure other people will put in their $0.02 on this subject.

Hello,

I have for sale the following vintage station:

o National NC-303 in very nice condition/restored and aligned. Works beautifully and comes with copy of the manual.

o Johnson Valiant(I) transmitter in beautiful condition. It has been restored to original spendor and has never been modified.

I am located in the Detroit, Michigan area and can be reached at 248-332-5429 between 6-9pm EST. Sorry, I will not ship these units as they are too heavy and too nice. I am asking $550 for the pair. I prefer to sell them as a pair and will give that first preferrence, however I would take offers on the units individually with that understanding. Thanks in advance for your interest.

Really like the look of these paddles and am wondering how
they play? Comparisons to other paddles greatly appreciated.

Really hate the look of the Japanese GHD paddles :) but sure
would like to try out the optical sensors.

Post or e-mail me by removing the CAPS in my address.

No. A VTVM is a very high impedance voltmeter. A VOM is the ordinary
common-or-garden multi-meter. Not suitable for some measurements.

Mike

260. HQ-180 in need of a good home

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-05 00:00:00 UTC

Source record: 91759

I have a Hammarlund HQ-180 that is in need of a good home. The cabinet is scuffed in places and has a dent in the top lid. There are some scratches on the dial escutcheon but it does seem to work okay. With a little paint and TLC this could be a prime specimen for a Hammarlund aficionado.

The price is $200 plus shipping/packing costs at the local packing store.

Dave K9HT

Source record: 91774

Hi Paul:

vtvm is a vacuum tube voltmeter. A vom is a volt-ohm meter. The vtvm does most of the things a vom does and in addition it offers the very high resistance of a vacuum tube rather than the low impedance of a volt ohm meter.

If you use a low resistance vom to measure a high resistance circuit, the reading will be low and therefore be wrong. The resistive input of a vtvm is 11 megohm. Vom may be as low as 1000 ohm per volt.

However, todays digital vom is so high that it is probably so close to the 11 megohm that it can be used wherever the vtvm is specified.

Good luck, Colin

283. Re: 6 Meter Amplifier FS/ Thank You

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-05 00:00:00 UTC
From: jack leishman <k8xx@gtii.com>
Message-ID: <3692E066.FDE0B64E@gtii.com>
Source record: 91782

I wouldn't sell my 4-400 amp on 6 meters for $600.00. It took months to get it to work properly. See results in January 1999 QST for contest results using this fine amplifier. Converted HF junk just doesn't stand up to contest operations. I said I would never respond to such nonsense as this thread, but many have obviously not spent the time and money making good amps lately. Jack k8xx

284. FS: DX-35, VF-1, AM-2, HQ-110, Matchbox, Challenger

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-05 00:00:00 UTC
From: Deke Lightfoot <dlightfoot@sprynet.com>
Message-ID: <3692B5DC.FDA23E01@sprynet.com>
Source record: 91783

Time to make room :

1. Heath DX-35 transmitter, VF-1 VFO, and AM-2 SWR meter. This station is in very good condition, complete and original. I am asking $100 plus shipping for all three.
2. I also have a HQ-100 with clock for $110 plus shipping. The receiver is in very good condition, however it has a small crack in the clock plastic, and the clock adjustment rod has broken near the clock.
3. Johnson 275 Matchbox, very good condition but with some scratches on the top. This is the metered version and includes a M.C. Jones MicroMatch coupler. $100 plus shipping.
4. Johnson Challenger transmitter. The radio is in very good condition except that the cabinet is scratched and should be re-painted. The front panel has a couple of small blemishes. $75 plus shipping.

Offers are welcome of course
Thanks and 73, Deke

From: Jack Hardin <jhardin@hal-pc.org>
Message-ID: <3692EE18.25E7@hal-pc.org>
Source record: 91784

Need help locating the right wire to cut for Kenwood TS-830S WARC band modification --
I have the TS-830S manual instructions do the WARC band modification, but I'm not sure which connectors and pins are being referred to -- can anyone give me some better descriptions of the connectors and the right pins on the RF and AF board they're talkiing about? I can locate the boards themselves OK. The manual refers to connector numbers without mentioning where they are located on the boards -- and I don't want to mess this up. Any assistance would be appreciated.

Here's a list of a few things folks on this group might have an interest

in. All prices plus UPS from 07657. Thanks for the bandwidth!

1.) Techron 5000 WATT audio amplifier. Modified model 8521.Similar to
Crown 7700 series. This unit was originally used to drive
gradient magnets in a Picker MRI scanner. Class AB. Matches loads to 1
ohm or lower. Frequency response DC-50KHz. Output +/- 145 V 45A rms,
180A
peak. <.1% THD Originally used 3-phase 480V power supply, but has been
converted to run from single phase 208-240V (will run on normal
household dryer/ electric stove circuit). Mounted in rollaround rack
with blower cooling. Has DVM readout of output voltage/current.
Possible applications as DC servo motor driver (5 HP), Impulse generator

for precision resistance welding. Shaker/vibration
table driver, ELF transmitter, Stadium size PA amplifier, world's
loudest garage band, subwoofer from hell, etc. Have all
documentation/service manuals. Modifications professionally done. $1000
OBO BUYER PICKUP or LOCAL DELIVERY ONLY. (Northern NJ) Weight about 250
lbs or so.

2.) Vishay/MicroMeasurements 4-channel strain gage amplifier and power
supply. Model 2110/2120. Gage excitation , balancing, cal sigs. Analog
output. $75

3.) Sony VO-5600 3/4" VTR 19" rack mount commercial/broadcast quality.
Excellent condition. $150

4.) Tektronix 5103 rack mount scope. Mainframe working well. Plugins
(5A18/5B10) need work.
$40

5.) Military dummy load/wattmeter AN/PRM-33 reads to 150W in 4 ranges.
Good to 400 MHz. No slugs needed! $100

6.) PowerMate variable regulated power supply 0-40 VDC @ 25A. Adjustable

current limiting. Volt and Amp meters. Good condition. HEAVY-pick up
preferred, but will ship if you pay for crate! $150

7.) HP 651A audio generator. Sine wave 10 Hz - 10 MHz. 50 and 600 ohm
outputs and level meter. $125

8.) HP 606A RF generator 50 KHz - 65 MHz Internal AM modulation. Up to
3 V output (+20 dBM) into 50 ohms $100

9.) Boonton Radio 202H AM/FM signal generator 54-216 MHz AM or FM modulation. $100

10.) Box of good, used, tested tubes. No useless series-string TV types.

Mostly pulls from test equipment (old HP/Tek) and industrial gear. 6 and 12 volt types, lots of
Industrial/military types. Some large thyratrons, MV rectifiers, PMT's and an X-ray tube (condition unknown). Some audio types (5AR4, EL34, 6L6, 6DJ8, some Amperex/Mullard stuff.) Approximately 450 pieces total. Prefer pick up. $175

11.) Junkshelf full of 286/386 era PC parts. Motherboards, cases, 30 pin

memory modules, hard drives (IDE and MFM) , coprocessors, etc. A few complete, working AT&T 286 systems available. Too numerous to give complete list--tell me what you need.

That's it for now. Thanks Again!

73,
Bob Weiss N2IXK

You probably knew what the letters stand for, and now you know
all about there input impedance.
Also very important...
When you are going through an old Heath or other boatanchor
schematic and taking voltage readings, look to see what the
manfacturer used to obtain the readings.
If it was an old VTVM, you should use same.
A DVM and more so a VOM may give very differant readings,
depending on the circuit.

Hi Curt,

Don't know why you couldn't do it. Might have to move the taps around on the loading coil but, it should work. Mainly I just wanted to say, that's a great rig. I had the 570 and 560 should have kept them both. I now have the 400 twins, they are the same vintage and design as the other FTDX stuff.

Keep the tubes burning and have fun.

Hello Casey,

Different folks like different things, and CW operation is no exception. I got into contesting as soon as I got a license, (1967, age 13). But I also love a good ragchew - one where I can slide the weights back and really let the bug wiggle. Also loved traffic handling - family/job obligations prevent much of that nowadays.

I'm no big gun at contesting, and time limitations make FD and SS my only real outings. Yet it's still tremendous fun to see what can be done with my modest setup (100W homebrew hollowstate CW transceiver on 80/40/20, inverted V at 40 feet, and a 20 m ground plane. No computer, no keyer, just me, pencil and paper logs and the old bug.

Contesting is a real test of operator and equipment - any weaknesses in either show up real fast. It's also a way to improve operaing skills, particularly code speed - gains of several wpm in a weekend are not uncommon for some folks.

310. Re: Anyone use G4ZPY paddles?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-06 00:00:00 UTC
From: Steve Murphy <k8vo@flyingbeers.org>
Message-ID: <l4Ak2.625$x53.421@news.flash.net>
Source record: 91792

Hi Casey,

I have a set of the Model 41 VHS paddles from G4ZPY and think they're fantastic. Prior to this I used the Vibroplex iiambic paddles for 13 years and was happy with them, but when they suffered a fall from the desk I had to find another set to use until I repaired them. Found the G4ZPY used for $90, and jumped at the offer.

The G4ZPY paddles have a much "smoother" action than did my Vibroplex, and stay in adjustment much better. I like the wider spacing of the levers on the 'ZPY, they feel more comfortable to me. In spite of being much smaller and lighter than the Vibroplex, it feels more substantial and is less prone to walking across the top of the desk when in use. I find that I make far fewer mistakes with th 'ZPY, something that those working me probably appreciate!

The 1/8" stereo socket is a simple solution to the problem of connecting the cable to the paddles. The thumbscrews (thumbnuts?) on the Vibroplex tended to loosen up on me frequently, always at the wrong time, which could be annoying.

Not that I don't like the Vibroplex, I have tried Bencher's paddles a few times and just plain don't care for them, I dunno why, they just seem kinda cheezy for some reason. I also used the Vibroplex Brass Racer for a while, but couldn't get used to the feel of that key. Actually, I was pretty satisfied with the Vibroplex iambic until I got spoiled by the G4ZPY! But then, the 41 VHS retails for $239, quite a bit more than the Vibroplex. I should also add that my Vibroplex has many, many miles on it, where the 'ZPY is virtually brand new, so my comparison may be somewhat unfair.

Anyways, there's my two cents worth. Some may not agree, and that's fine, since this is a purely subjective evaluation and paddle preference varies from one op to the next. None the less, there's no disputing that the 'ZPY is a hell of a key!

73,
Steve K8VO

Source record: 91794

>It seems the high prices may be justified if the Radiofinder was selling
>museum quality collectibles

Point of order here...I have acquired pieces for museums, and they are never over priced. $200 is the most I've ever paid for a museum piece. The restoration was taken in house, rather purchased from a dealer, or even a private party for an exorbitant price. Further, many pieces were not restored at all, they were put on display as working pieces with character, and history in the chips in the finish, and the open grain.

Of the museums I have been acquainted with, so called, "Museum Quality" pieces are loaned from private collections rather than acquired at cost to the museum.

And for the record, W.C. Fields said, "Never give a sucker an even break."

P.T. Barnum said there was, "one born every minute."

Ok, remove covers.

Turn the radio upside down with the tuning knob looking at your belly
button. On the left side is the audio board. On the right edge of the
audio board are several connectors. The second connector from the rear
is a 5 position plug with a gray, black, purple, blue, and yellow wire.

CUT THE BLUE WIRE. That's it.

Source record: 91817

I just bought a Knight R-55A receiver that someone had started to rebuild by clipping a lot of components and connecting wires out of. Does anyone have an assembly/operations manual that they could copy and send to me for a fee. I checked A.G. Tannenbaum and they did not list a manual. Thanks in advance. Art.

Source record: 91637

A friend of mine is selling a Collins 51S-1 receiver. Mechanically, the receiver is in excellent shape. Appearance is an 8 out of ten. Receiver seems to work well except for the usual pop and click in volume controls/switches after years of storage.

The only modification we can see is that a round hole has been notched out on the back panel. No other mods are visible.

I would be most happy to send JPG photos of the unit by return email.

Hello!

I hope you are having a Happy 1999!!!

I am looking for some old germanium transistors to restore a National HRO-500 receiver (1964 vintage).

This is the list. If there are more than one in a row, they are equivalent types:

2N3294
2N2672, 2N2188
2N2429, 2N2375
2N2654, 2N2997

Please, let me know if you have any of them or if you know where to find them.

Thanks!

JOSE

Message-ID: <3694C6FB.82AFE3D0@tds.net>
Source record: 91650

Have noticed that many (the majority) of people posting stuff for sale may post an item by brand and model, then price or just model and price. I, for one don't always recognize what that item is by just the model, especially, since there have been hundreds of model number changes over the years. (or it has not been made in 40 years)

Suggestion: If you really want to sell the item, why not give a short description of what it is? I imagine that a lot more people might take interest if they know what they are looking at.

For example: "FS 901DM $350 plus shipping" (and this is typical)

I'm sure there are a number of people that know what that is and what it

is worth. A lot more do not. Too bad for the seller, since that is a fine old Yaesu HF band only transceiver that was one of the best of the breed at the time. (and is still a great rig for someone on a budget) Also, how many people are going to realize it has tube finals? Yah, I know, they can hunt it up on the internet. Personally, I figure if the seller can't take the time to say something about the unit other than "it's a 9 out of 10", why should I take the time to go find out what it is? I'd rather deal with someone who sounds like they know something about the rig and aren't just dumping equipment they bought cheap from a

widow or estate sale.

How about: "FS - Yaesu 901DM hf transceiver. rx ham bands only. covers 10-160 inc warc bands. optional 250Hz CW filter. tube finals."

If you were taking the item to a hamfest to sell, wouldn't you take the time to shine it up? What's the big deal about taking an extra 11 seconds to tell what the item is in an email?

Ok. Soapbox now put away. <g>

Message-ID: <3694FEF4.4975@star.enet.dec.shouldbeobvious>
Source record: 91657

Another :-) thing to remember about VOMs/DVMs/VTVMs/etc. In some cases, the test voltages on a schematic were done using a VOM with a specific impedence (usually 20K/V). If you make the measurements with a meter having a much higher impedence, the voltage measurements will be off (to the high side.) This is due to the reduced circuit loading.

When trouble-shooting using a schematic, make sure you take note of the equipment and settings.

I have several meters, analog, digital, high impedence, "normal" impedence, portable, bench/system, etc. They all have their uses and places in testing.

- Mark

museum.

What you say is all true except for the fact that "museum quality" does not have to mean that unit is going to a museum. A private collector may want to purchase something in mint condition and keep it as an investment or collectable.

Everyone who buys these old radios is not necessarily interested in or up to restoring them. If that case, whoever did the work of restoring the unit to "museum quality" may be entitled to be compensated for their efforts, assuming they are competent and have done a good job that has added value. If you bought a '64 Corvette that looked like it was right out of the show room you would expect to pay a lot more than for an old rust bucket. You would also try to sell the same for a higher price if the shoe was on the other foot.

The question is whether or not the Radiofinder is nothing but a hacker with marginal hobby expertise who thinks what he does is worth an inordinate amount of money and is trying to rip people off. I am not familiar with his work (but maybe we can hear from someone who is) that call tell us if he is really worth his prices.

SELLING ...

1. DRAKE TR-7 w/AM, SSB & CW filters, NB, AUX-7/TR-7A factory specified
mods,
and whisper quiet non-Drake fan. Original manual. Very nice condition.
Asking $475. shipped conus.
2. PS-7 also with very quiet non-Drake fan. Very nice. Asking $175.
3. MN7 Matching Network. Nice. Asking $95.
4. Drake desk mic. Minor cosmetics. Asking $75.
5. P-75 Phone patch with original manual. Very nice. Asking $85.
Asking prices include shipping conus. Asking $800. for all five pieces.

ALSO SELLING ...

6. TOSHIBA Satellite 115CS laptop. Pentium 100.
16m RAM, 775m HDD, FDD, Color Screen,
PCMCIA ports, Win95 and misc utilities as
provided new, cables, manual, original box.
Very nice. Asking $525.
7. 56K PCMCIA fax/modem. Less than a month
old. Works awesome, have all papers, disks,
and original box. (My new laptop comes with
an internal modem.) Asking $85. shipped conus.
($75. if you buy the laptop.)
8. Pentium 133 mHz Desktop PC w/dual 580meg HDD,
FDD, CD-drive, monitor, keyboard, mouse, modem,
sound card, 64m RAM, Win95. New VX98 motherboard,
and new PCI 2m video card. Rock solid reliable.
Asking $425. (local pickup, or will deliver or meet within
reasonable distance of Southern NH)
9. ICOM IC-27A 2m mobile w/mic, mounting bracket,
power cable, manual. Asking $135. shipped conus.
10. CITIZEN GSX-220 24 Wire Dot Matrix Printer with
Color Mod & several ribbons. Asking $55. ($45.
with desktop or laptop PC, prefer pickup)
11. PANASONIC KX-P1124 Dot Matrix Printer.
Asking $35. pickup ($25. with desktop or laptop PC)
12. PALOMAR P-410X Transceiver Preamplifier.
Design Range 1.8 - 54mHz. Clean w/manual.
Asking $75. shipped conus.
13. KENWOOD IF-232C Interface. Clean w/original
box and manual. Asking $65.
14. KENWOOD TM-732A 2/440 mobile. Chassis,

remote mounting cables, mobile mount. No LCD
section (use this assembly as a backup or second
location between which the head is moved)
Asking $95. shipped conus.
15. MOTOROLA MITREK 2m range Mobile. These
commercial quality 30-40w rigs are frequently used
to make Ham repeaters due to their ability to tolerate
continuous duty. They also make excellent packet,
emergency and mobile rigs due to their durability.
These include the main box, remote control head,
cables, and mics. (I have 4 sets.) These are the
4 channel models and you may get the modules
re-crystalled by JAN and others. Asking $35.
as-is each (shipped conus), $55. tested.
They are not abused though they could use a
little cosmetic cleaning.

Happy New Year!

Art;

Try Hi-Manuals or W7FG manuals. My R-55 manual was lost some time ago and I got a copy from Hi-Manuals (who is somewhat more expensive than W7FG). There is another outfit in Florida (NI4Q(?)) that puts out exceptionally good manuals.

370. Re: HRO radios, whuzzat?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-07 00:00:00 UTC
From: brokebob@aol.com
Message-ID: <19990107163016.01062.00007156@ng-cd1.aol.com>
Source record: 91667

HRO radios were highly regarded communication radios for both hams, SWL, and the military. They were many more radios by Hallicrafters, Hammarlund and probably others but the quality and features were pretty much the same (price being considered). HRO early on used plug in coil assemblies rather than band switching and an older HRO with a coil set brings a premium price today. brokebob@aol.com (broke=not working, retired=not working, retired=broke)

Source record: 91671

The HRO was more like a piece of lab equipment than a radio. I have owned many radios and there is no doubt that National was the best (most stable, lowest signal to noise to ratio) until Collins began making receivers in the late 1940's.

Source record: 91674

The HRO is a nice vintage receiver. National marketed versions of the HRO for 25 years then came out with the transistorized/synsysized HRO500 and HRO600 and sold more of those. One version or another of the HRO was National's flagship receiver for 50 years.

I've a web page with lots of information on it about the HRO and other National Radio Company products/history. Go to:

http://www.io.com/~nielw/index.htm

and follow the "National Ham Radio Product Listing" link.

>price. I, for one don't always recognize what that item is by just the
>model, especially, since there have been hundreds of model number
>changes over the years. (or it has not been made in 40 years)

Mark:
Sellers' experience is that the best price offer comes from someone who is looking for an item, and therefore has researched it, and needs only the model number. I realize this leaves out the "surfer", but everyone I know who is serious about all this has equipped themselves with some of the reference books. Also, many of the descriptions are available on line at one of the seemingly endless number of web sites referenced by many of the postings. I'm not against your suggestion, just trying to explain how the present shorthand developed. You used to see the same limited information on 3x5 cards posted in radio stores when there were radio stores.

>>museum.

>What you say is all true except for the fact that "museum quality" does not
>have to mean that unit is going to a museum. A private collector may want to
>purchase something in mint condition and keep it as an investment

Correct, however my point was not that the piece was intended for a museum, or even for display, but that the term "Museum Quality," is a meaningless term. Many of the pieces on display are NOT restored, and can be pretty ratty looking depending on the purpose of the display. And that an abundance of pieces are "As is" in museums.

"Fully Restored, " "100 Point," or even "Mint Condition," as subjective as those terms are, have more meaning.

The term "Museum Quality, " as oft used here is a chosen to impart added value to a piece that it may or may not have, in order to drive up the price. Now don't get me wrong, I'm a good capitalist like the next guy, but if there were to be truth in advertising here, (or anywhere for that matter--but that's another story) then the term "Museum Quality, " would not be used here, or in fact, anywhere.

Hello!

I hope you are having a Happy 1999!!!

I am looking for some old germanium transistors to restore a National HRO-500 receiver (1964 vintage).

This is the list. If there are more than one in a row, they are equivalent types (according to the HRO-500 manual):

2N3294
2N2672, 2N2188
2N2429, 2N2375
2N2654, 2N2997

Please, let me know if you have any of them or if you know where to find them.

Thanks!

JOSE

PS: Sorry if you get this message twice. I am not sure if it was sent first time.

Hello!

I would like to invite you to join a new e-mail group (eGroup), called "European Boatanchors Swap List" (EuroBA Swap for short). This group, as the name says, is mainly oriented to European people but, of course, everybody can join it. If you are not interested, please, forgive me for the bandwidth.

This group is focused to european Boatanchors users who want to buy, sell or swap them (or related material as manuals, parts, ...) inside Europe limits, mainly to save on shipping costs (you know, BA items are not lightweight!). Of course, general messages about Boatanchors would be also fine, but it is not the purpose of the group, as these are not limited to European users.

This group could be also useful to help arranging shippings or locally examine items for other members (virtual eyes ;-)!). Let's give the fraternity a chance :-)!. I should say here that I have received great support from people already in the EuroBA Swap List. Thanks!

You can join this List by sending a blank e-mail message to:

euro_ba_swap-subscribe@egroups.com

And you can also visit the EuroBA Swap List home at:

http://www.eGroups.com/list/euro_ba_swap

Please, if you have any question or comment, e-mail me directly.

Thanks!

Best regards.

JOSE

415. NC 183 NR LO tube ????

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-08 00:00:00 UTC
From: dan harlan <dharlan@ameritech.net>
Message-ID: <36962A0A.2E57@ameritech.net>
Source record: 91703

Hello All,

I have an NC 183 NR RX, that I am having trouble getting the LO to track properly, Stamped into the chassis is "6J5" but silk screen'ed next to the socket is "6SN7" and there is a 6SN7 in the socket.

The rig works fine except for the dial calibration. The symptom reminds me of an SX28 with a glass tube in the LO socket. You can move the band up and down the dial but cant get it to spread out for proper tracking. (hope that makes sense!)

So I gues my questions are:

Did they make a metal 6SN7??

What was used in a regular NC 183 for the LO???

TIA

Dan N8ETQ Cleveland, Ohio dharlan@ameritech.net

The 2N3294 is a Motorola Silicon NPN general purpose high gain low noise
RF transistor that has a typical Ft of 600 MHz. It is in a TO-72 case
with the case connected to the fourth lead and the other leads are
insulated from the case. JUst about any low noise RF transistor should
substitute for it, assuming it's in the same case, or is shielded.

Like I said, this is a silicon, not a germanium transistor. The above
info is straight from the Moto Manual.

The others seem to be germanium PNP. If they are RF, then you might try
using a 2N705, or else look for a substitute at www.nteinc.com.

There was a change during the production
period in that part of the circuit.
I believe the 6J5or 6SN7 are part of the
audio circuit. I have come accross these
receivers myself but not a corrected manual.

Hi Rich,

thanks for the reminder. I hope you are not so inclined to clutter
the newsgroup every 6 hours until it's finally over. The actual
price is low indeed but it doesn't say anything about the final bid
which is very likely to occur within 60 seconds of the deadline.

From: Bis_Wichy@webtv.net
Message-ID: <8453-3697FBCF-36@newsd-162.iap.bryant.webtv.net>
Source record: 91526

Yes it was an ARRL project. In fact, Henry Radio was selling actual finished units you could attach to your SSB rigs and was advertising them in QST for a few issues.

Never went anywhere... like the AEA Hamlink and the HAL Auto Answerer which converted your telephone answering machine to receive voice messages over 2M repeaters...

Ham's rejected them all... forcing the ARRL from finding a technical way of getting more hams on the bands to changing the licensing regulations to get more hams on the bands...

Make sense??

439. question - black ink for dial markings

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-09 00:00:00 UTC
From: jm_lekostaj000@ibm.net
Message-ID: <jm_lekostaj000-0901991928290001@slip-32-101-120-242.il.us.ibm.net>
Source record: 91527

Am looking for suggestions on how to mark a new plastic window for a BA receiver with a solid, narrow black line as a dial pointer. I have tried an extra-fine point Sharpie pen, but the line looks too "thin" (watery). I think black paint would look best, but how can I make a 0.5 mm wide line with black paint? Any suggestions?

BTW, I've been told that India ink won't dry properly on plastic; it's made for vellum. Also, black drafting tape doesn't look so great when viewed through the plastic window to the adhesive side of the tape. So I've ruled out those approaches.

73,
Joe WB9GOJ

I remember a little about this board. I attended a seminar at the ARRL Midwest Convention back about 1986. I remember them saying that a number of project "kits" had been given to a number of people for experimentation and testing. Sounds like this guy got ahold of one of the blank boards without the rest of the parts or documentation. Since ARRL was the source for these kits, I would suggest getting ahold of someone there connected with QEX. They will have the back articles on Amplitude Compandored Single Side Band (ASCSSB). You are right about the pilot carrier. The whole thing flopped because without the pilot carrier, there was no reference point from which the receiver could reconstruct the signal. I you are going to transmit a reference (pilot) carrier, you defeat the whole purpose of ASCSSB (saving bandwidth). The only way they could get it to work without the carrier was to work only on precise preset "channels" with little or no tolorance for deviation in frequency.

Hope this helps whomever. Please don't flame me if I got some parts of this wrong, it's been 10 - 12 years since I dealt with this one.

Wayne , KEï¿½BZ

Go to http://www.searchspaniel.com and search
AltaVista, Excite, and DejaNews all at the same time,
try a search on Icom t2a mods

Lower case on everything but the brand seems to provide
the best results.

You can discover prices, mods, options, pictures, just about
everything about Ham gear on the Internet using this sort
of search on SearchSpaniel ... I love it!

Just remember to bookmark every site you find in an easy
to remember folder and change the title as necessary to
make later identification of the purpose of the site easier
(some sites get saved as just "index", or something equally
useless, by default).

Nope, I have no relationship with that company other than
as a very satisfied user of their free service!

Happy New Year!

The manual for the NC-183 shows a pair of 6J5s, one in the HF osc and one in the audio circuit. Check the wiring to the tube socket. The 6J5 is a single triode and the pin out is different than a 6SN7.

Do you have another 6J5 in the audio circuit?

RhyneK wrote:

Hi Dan.
My manual shows a 6J5 H. F. Osc.(triode)
It's the first tube just behind the band spread dial. pin 3 plate, pin 5 grid, pin8 cathode, filament 2 and 7.
The 6SN7 is a dual triode tube.
They have totally different internal connections. 1st triode plate pin 5, grid pin 4,
cathode pin 6. 2nd triode plate pin 2, grid pin 1, cathode pin 3, filaments 7 and 8.
Hope that this info will be of some help.
73 de Mike, K6STU.

I need a Pitch Contol knob for an S-108, but there are other radio models
that share this style and I think any one of the smaller knobs can be made
to work.
If you are parting out a HT-37, SX-110, S-108, S-107, please email me at
bmwebb@kiva.net

Thank you,
Brian

466. Mystery of the SX-62

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-09 00:00:00 UTC
From: tom@bluesky.org
Message-ID: <tom-0901990745450001@fla-r1-p1323.cybertrails.com>
Source record: 91599

The recent discussion about prices for SX-62's rekindled my curiousity about this remarkable receiver. Checking the books, I see my beautiful, cherished, and unliftable SX-62B sold for $525 in 1965, which must be $ several thousand today. Without any bandspread or BFO pitch, the receiver was/is pretty much limited to local AM and FM broadcast and random AM SWL listening, with uniquely powerful mono audio output. For the same or less, back then, one could have had a Collins 75S-1, Drake R-4, Hammarlund HQ-180, etc.

It's amazing that Hallicrafters was able to sell any of these beauties. I've concluded that their value lies somewhere between fairly worthless (as a radio) and priceless (as a decoration, bookend, and conversation piece).

From: David Edgar <dedger@gte.net>
Message-ID: <777svp$f0f$1@news-2.news.gte.net>
Source record: 91602

I have a Swan 250 that I am in the process of rebuilding (my first radio project). In the back left of the chassis there is a transformer with the following numbers on it: 3946646 and 272-001. On the chassis picture in the manual the number is T1201.
I have not been able to find a replacement piece or been able to cross the numbers to a new piece. Can someone point me in the right direction?
Any help would be appreciated and thanks in advance.

470. WTB: IC-10 chips, MB-430 for TS-440SAT

Message-ID: <777trl$1sb$1@oak.prod.itd.earthlink.net>
Source record: 91603

Hello, and thanks for reading,

I am looking for the two chips that make up the "Kenwood Interface IC Kit
IC-10".
These are the two chips that are installed inside the TS-440SAT to allow it
to talk
to the (external) IF-232C interface box, which I have already found.

The two chips that make up the IC-10 chip set are:
uPD8251AC (NEC or equivalent)
TC404BP (Toshiba or equivalent)

There used to be sources of these chips other than Kenwood - would
anyone know their whereabouts?

I'm also looking for the MB-430 mobile mounting bracket kit for
the TS-440SAT. It's a combination of a bracket and a handful of
other mounting hardware (I have a bracket but not the other hardware but
I would be willing to buy a computer mobile bracket kit if need be.

many thanks, and regards,

brian

473. Re: Mystery of the SX-62

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-09 00:00:00 UTC
From: ed_engelken@my-dejanews.com
Message-ID: <7785m6lmh1@nnrp1.dejanews.com>
Source record: 91606

The SX-62, SX-62A, SX-62B production ran from 1948 until at least 1965 making this one of Hallicrafters longest running products. The external design never changed over 17 years of production, only the knob style changed over the years. The SX-62 was a SWL version of the SX-42, Hallicrafters top-of-the-line post-war receiver. The SX-42 only lasted 4 years. I suspect that the styling and "eye-appeal" is what sold the SX-62 for so long. That is probably why I have two of them, one in the living room and one in my radio room.

Best Regards,

Ed

Hi David.
I take it that you are talking about the audio output transformer.
I have a 250C and the audio output tube is a 6GK6. I have to assume that the 250 has the same audio output tube.
The transformer that it takes is a 5K primary to 8 ohm, 4 ohm or 3.2 ohm whatever your speaker is. You will need a 4 to 5 watt transformer. The higher the wattage the better. If a 10 watt will fit get it.
At least with this info you have a place to start.
Try radio shack, or any of the surplus houses such as Fair Radio, Surplus sales of nebraska..
If you live here in Los Angeles, I can refer you to a couple of local surplus stores.
Let me know if your radio has the same oudio output tube as mine.
Good luck and 73 de Mike, K6STU.

484. Re: Mystery of the SX-62

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-09 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <3697AF3D.F0C2F313@calweb.com>
Source record: 91617

Tom,
Yes indeed, to a non ham the SX-62 probably looked like the ultimate radio with its cinema scope dial and all. A real beautiful 60's kind of appliance. A fellow mentioned the SX-88 as the ultimate Hallicrafters general coverage receiver, but given the low production numbers and the amateur targeted audience, the SX-88's is more aberration than representative in the Hallicrafters scheme of things. From an amateur standpoint, the SX-88 was real purrrrty, but the SX-88 better illustrates externally what the ultimate short wave receiver should look like in 1960's terms....even if it was a pile of crap. I own two and love them even if they were the biggest rip off Billy Boy ever produced.
Bob, KE6F

But what exactly is this? The "SSB Compandored" part makes me think
you are talking about NBVM (narrow band voice modulation) that got a lot
of hype one year and then faded into oblivion. It compressed both
amplitude and frequency, before going into the audio input of your
transmitter, and at the other end it expanded them again by taking audio
out of the receiver. It was not a traditionaly amateur experiment, since a
couple of people "invented" it, and worked up all the details, and then
released it to the public as a finished product. It must have been i[n
QST in 78/79. It was on the cover, and the article was a "gosh aren't
these great inventors" piece, with a technical article to follow. I don't
think I saw the technical article. The details were in the 1979 ARRL
Handbook, I think the only time it was there and one of the few places to
look for information about it since the whole idea sank pretty much into
oblivion shortly afterwards.

But I'm not sure what you'd be looking for a CQ article for when it's an
"ARRL project".

The only other thing I can think of is ACSSB (Audio Compandored
Single Sideband) that compressed the audio signal on transmit and expanded
it on receive. Basically the amplitude compandoring used in NBVM, and a
concept that had really been around before that. But ACSSB added a pilot
carrier for technical reasons. There's a small bit in the 1986 ARRL
Handbook, and the same bit is also in the 1993 Handbook (the two most
recent Handbooks I have).

It does mention a QST article in QEX for July 1982, "On SSB Radio
Communications" by J.S. Belrose.

I didn't know there was an "ARRL Project" for this, and again, even if
there was why would it be described in CQ?

`Did you only get a blank board? Does it have anything written on it?
Any date at least? If the board is populated, what are the IC's? What
about their date codes?

What exactly did the seller tell you about this board?

Michael VE2BVW

I saw a SX-88, probably cosmetically a high '8,' unknown electrically, go for $50.00 two weeks ago at an estate sale. Got there about 15 minutes too late, alas. You should have seen the grin on the new owner's face! If it had been a 75-A4 at that price I might have turned to a life of crime right

then and there. . . :)

I used to work for a company that had the Motorola programmable VHF radios. I think they were 16 channel 5 watt, but any of the programmable ones will do. I was able to take it to the shop were it was purchased and have it set up on the local 34/94 repeater and 146.520. It worked very well. The only consideration is the antenna. Motorola's antennas only have a certain band width, so it would be better for the radio if your business freq. fell within the same bandwidth as the amateur freq. you want to use.

Late 60's/early 70's vintage Yaesu tube type SSB/CW/AM transceiver with built in AC supply. Cosmetically a 7 or 8. Receives fine on all bands but transmitter section needs some attention. Has output (about 200 watts on 75 meters) but no audio. Have not had time to check tubes or troubleshoot. Comes with copy of the manual.

$175 plus actual UPS charges from 24018. USPS money orders only.

I plan on taking this unit to the Richmond VA Frostfest next Sunday, January 17, 1999, if it doesn't sell before.

508. Re: FA: ElectroVoice 664-type Mic w/stand

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-10 00:00:00 UTC
From: "Dr. Joe E. Mesh" <jm@drsmesh.com>
Message-ID: <77alkm$1eo$1@ink.msen.com>
Source record: 91488
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

It may be manufactured by ElectroVoice BUT it is certainly NO EV664.

Caution is certainly in order. The appearance modifications which clearly distort and disfigure the classic styling of the highly collectable EV 664 substantially influence value. I elect to use caution and pass on this controversially represented EBay (funny how EBay invites controversy!) offering.

Thanks for reading my opinion typed in beautiful downtown Hell, Michigan .....Joe / W8SS
Al Dolgosh wrote in message <3698AA9C.4F7DE216@hamradio.org>...
Tom, you are only repeating what I made very clear in my posting and my Ebay description. But then you tag it with a "caution".
Electrovoice modified the appearance of the 664 for Allied/Knight - as OEM manufacturers commonly do for "private labeled" products. I reported that they did this by "slightly modifiying the appearance" and "by eliminating the rib on the mic body".

Is there something that is bothering you about my offering? Please let me know and I will be happy to answer any specific questions about this ElectroVoice-manufactured mic. If you wish, I can send you a copy of the 1963 Allied Radio catalog page that fully describes this mic - as I have described it.

I'm sorry you feel it is necessary to advise people to "approach with caution". I believe you are underestimating their intelligence to read and understand what I have completely described.

Al - K8EUR

513. Correction FS: Yaesu FTDX-400 Tranceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-10 00:00:00 UTC
From: "David M. Nance" <dmnance@roanoke.infi.net>
Message-ID: <3698F285.5F07712F@roanoke.infi.net>
Source record: 91493

My earlier report regarding no audio on the FTDX 400 must have been greatly

exaggerated. Just worked HK0TCN in a pileup on 10 meters with just a
windom antenna. He gave me a 5x9 and said I sounded good. Unit still
needs going through and has low output but it does work.

"David M. Nance" wrote:

515. CC-AWA Winter Swap Meet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-10 00:00:00 UTC
From: Ron <kc4yoy@pop.trellis.net>
Message-ID: <01be3ccf$95ceafc0$864896d0@ron>
Source record: 91495

Hi Gang,

Don't Forget, The CC-AWA Greensboro Meet is NEXT Saturday

And it's INDOORS....

CC-AWA. GREENSBORO
WINTER ANTIQUE RADIO MEET

Hosted by Brad Jones

SATURDAY, JANUARY 16 7AM-NOON
CITY LAKE PARK
602 W. MAIN ST.
JAMESTOWN, NC
RAIN OR SHINE (OR SNOW!)

New and better location ... set up indoors (covered loading area) or in the
parking lot outside. It will be cold, so most of the buying and selling will
be in a heated area. No tables or chairs available - bring your own.

TO GET THERE FROM CHARLOTTE:
Head north on I-85 to Greensboro.
Take the Holden Road exit (#121) (long exit ramp).
Turn left across the highway, north on Holden.
At High Point Rd., turn left.
Go 7 miles, look for City Lake Park on the right.

TO GET THERE FROM RALEIGH:
Head west on I-40.
Take the High Point Rd. exit (#217).
Turn left on High Point Rd.
Go 7.5 miles, look for City Lake Park on the right.

TO GET THERE FROM ROANOKE:
Head south on 220.
It will turn into Battleground Ave...follow to Wendover Ave.
Take Wendover Ave. east to I-40.
Take I-40 east to High Point Rd.
Turn right on High Point Rd.
Go 7.5 miles, look for City Lake Park on the right.

Park opens at 7 AM - no need to get there before that time. Building is
available until mid-afternoon. The park is open all day. There is a $7
dollar charge to set up - no charge to shop.

For hotel information or other questions, contact Brad Jones
336-547-1919
or E-mail BandTJones@aol.com

SEE YOU THERE!

Hi Dave,
You do not quote your Bus Freq but from what I remember it is
normally way outside the nominal 2m band so there is no way that you can
use your 2m rig unless you significantly modify it. I suspect that the
cost would not be worthwhile.

All the best

Hi there,
Here are the current bids on the tubes. The high bidder has the choice
to take any or all the tubes he has won, however he may not take all, so

even if you are not the highest bid, you may still be awarded some. So
please confirm your current bids with me.

All of the following tubes are being liquidated to the highest bidder
on January 15, 1999 regardless of the selling price.
Any of the following may be sold to reasonable offers prior to January
15.
Purchasers are responsible for all shipping and duty costs.

Here are numbers of tubes I have available at present along with
the current bid in US$.
NOS / Used

Seimens F2A Sold / Sold
Seimens ZZ1040 15 no bid / 15 no bid
Seimens ECC40 2 $2.00 each / -
Seimens 108C1 3 $8.00 each / 2 $4.00 each
Seimens E80F 4 $20.00 each / 7 $10.00 each
Seimens 85A2 4 $2.00 each / -
Seimens E80CC 5 $45.00 each / 3 $20.00 each
Valvo K81A 4 $2.00 each / 2 $1.00 each
6AV5GA 20 $3.00 each for 10
$2.50 each for rest

Don't you have anything better to do? If caution is needed for bidding on an item that is currently at $61 you're in the wrong hobby!

If you want it bid on it. If you don't want it don't bid on it. Isn't that simple! Let's get back to buying and selling radio equipment.

73,
Jack
K4HNO
Dr. Joe E. Mesh wrote in message <77alkm$1eo$1@ink.msen.com>...
It may be manufactured by ElectroVoice BUT it is certainly NO EV664.

Caution is certainly in order. The appearance modifications which clearly distort and disfigure the classic styling of the highly collectable EV 664 substantially influence value. I elect to use caution and pass on this controversially represented EBay (funny how EBay invites controversy!) offering.

Thanks for reading my opinion typed in beautiful downtown Hell, Michigan .....Joe / W8SS
Al Dolgosh wrote in message <3698AA9C.4F7DE216@hamradio.org>...
Tom, you are only repeating what I made very clear in my posting and my Ebay description. But then you tag it with a "caution".
Electrovoice modified the appearance of the 664 for Allied/Knight - as OEM manufacturers commonly do for "private labeled" products. I reported that they did this by "slightly modifiying the appearance" and "by eliminating the rib on the mic body".

Is there something that is bothering you about my offering? Please let me know and I will be happy to answer any specific questions about this ElectroVoice-manufactured mic. If you wish, I can send you a copy of the 1963 Allied Radio catalog page that fully describes this mic - as I have described it.

I'm sorry you feel it is necessary to advise people to "approach with caution". I believe you are underestimating their intelligence to read and understand what I have completely described.

I already HAVE a EV-664 and it doesn't look like this one! This looks similar, yet is shaped differently. Approach with caution...

>Type XLR...Radio Shack.

Jim, Thanks, but I don't think so. The female socket on the mike does indeed have 3 connections, but it has threads and needs a male plug that can screw on to it. An XLR would certainly be appropriate for the other end of the cable. . . .

536. WTT: Heathkit HM-101 wattmeter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-10 00:00:00 UTC
From: KP <kevski@hotmail.com>
Message-ID: <lobm2.3885$kR.38426024@ronws01.ce.mediaone.net>
Source record: 91516

Hi,

I recently bought a heathkit HW-102 wattmeter to use, it was a reasonable deal so I purchased it to use it- not as a collector piece. When it arrived I was shocked to see it was in absolute new condition, not a scratch or mark anywhere. It was also never calibrated, it showed 3:1 SWR into a MFJ dummy load. After I calibrated it per the manual (which the original builder never checked off) it works perfect.

Anyways.... I have no idea what these are worth but if someone who has a Heath station wants to trade any decent quality late model 1-30mHz 200/2000 watt SWR/power meter for it, I would do it. I have no Heathkit equipment at all and I would rather see it sitting next to a HW-101 then a FT-840 :-) It is a 10/10 in condition, I also have the original manual and box, also the Heathkit sticker was never put on it, its still stuck in the manual. The remote box was never screwed into the housing either, so the 4 holes in the cover that hold it in are not even marred.

If interested respond by e-mail. I can e-mail a pic if you wish also...

Thanks and have a great New Year,
Kevin

537. FS Rcvr/Transmitter Transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-10 00:00:00 UTC
From: Larry Asp <larry.asp@sympatico.ca>

I recently parted a homemade transceiver, and have 2 good power transformers that may be of interest to someone trying to get an old boatanchor receiver going, or a Johnson transmitter going. Pictures/URL for your convenience.

The smaller one is a Thermador CS5565 400volts ct @.02 amps. Mounts easlily with 4 case screws, and connections are marked. $10.00 plus postage

The second is a 700volt ct about same size physically as the low voltage supply transformer in the Valiant. Leads are tagged. $20.00 plus postage.

From: W4DAS <dcb@ecqual.net>
Message-ID: <36996051.0@news-out2.newsnerds.com>
Source record: 91520

I have the following Heathkit items for sale. I was told they were all working when I bought them but I have not tested them as yet. Prices do not include shipping from Stuart, Florida 34996. If you think my price is out of line make a reasonable offer.
1. SB-303 Receiver with SSB, CW, and AM filters. Case has some scratches. Face is very good. No mods that I have found. Original manual $125
2. SB-401 Transmitter with crystal pack. Repainted in slightly wrong green. Face is good. Original manual. $100. (If 303 and 401 are purchased together I have all the cables to connect them together.)
3. SA-2060 Antenna tuner with meters. Very good shape wit a few paint chips on case but not bad. Some residue on back that may clean off but not noticable in use. Original manual. $180
4. HWA-2036-3 Power supply. 13.8 volts at 3 amps. $20
5. IO-4105 Oscilloscope. Excellent condition inside and out. Works well with bright CRT. Original manual and PK-1 probe. $50
6. UNBUILT PK-1 probe kit. In original box - complete $20
7. AM-2 power meter. Good shape, a few small paint chips, face is good, meter face has a few light scrapes. $15

Thanks, Doug W4DAS

HRO receivers were manufactured by National Radio Company of Malden, MA and was the top communications receiver of its era (WW II and immediate following years). I have a U.S. Navy HRO 5R designed in two units for relay rack mounting -- the receiver in one and speaker, power supply and coil storage compartments in the other. I haven't fired it up in 20 years, but may do so one of these days and sell it.

Hi All,
I have for sale several lots of New Old Stock 6AS5 tubes. These tubes have a late date code and are individualy packaged in JAN boxes. The 6AS5 is a 7 pin miniature, beam pentode rated at 2.2 watts output. The 6AS5 is the same as a 35C5 but with a 6.3 v filament. Anyway, if you can use them I'm selling them in 20 pc lots for $26 plus $5 shipping in the continental US.

Thanks,
-Chris WA3LDI

Tom, you are only repeating what I made very clear in my posting and my Ebay description. But then you tag it with a "caution".

Electrovoice modified the appearance of the 664 for Allied/Knight - as OEM manufacturers commonly do for "private labeled" products. I reported that they did this by "slightly modifiying the appearance" and "by eliminating the rib on the mic body".

Is there something that is bothering you about my offering? Please let me know and I will be happy to answer any specific questions about this ElectroVoice-manufactured mic. If you wish, I can send you a copy of the 1963 Allied Radio catalog page that fully describes this mic - as I have described it.

I'm sorry you feel it is necessary to advise people to "approach with caution". I believe you are underestimating their intelligence to read and understand what I have completely described.

It is technically possible to "out band" amateur gear, but it is illegal to
use non-Type Accepted equipment on the business bands. It is legal
to go the other way, however. You can have amateur frequencies
programmed into your business band radio. The upside of this is that
1) you're legal, 2) the business band radio is probably better built,
IE rugged, and suffers less IMD. The downside is that some of the
bells and whistles of ham rigs won't be available, IE scanning, VFO
style operating, etc.

If you just need a few repeater and simplex frequencies, reprogramming
the business band radio is the way to go. If what you really want is a scanner
that happens to be able to transmit, then a ham rig is what you want, but don't
transmit out of the ham band unless it is an immediate threat to life situation.

Forgetting to bring your business band radio doesn't count as an emergency,
and trying to save a few bucks doesn't count as an emergency either. The
times when you could legally use a ham rig on business frequencies are so
rare that you're generally just fooling yourself if you think this would be useful.

576. FS: 16 vols. of Radio Boys books

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-10 00:00:00 UTC
From: acomarow@aol.com
Message-ID: <19990110090332.13864.00010718@ng-fb2.aol.com>
Source record: 91570

I have decided to part with my Radio Boys set of 16 volumes. I want to sell them AS A GROUP. I will offer them on a couple of radio-related newsgroups before posting them on ebay.

These are reading copies in good condition rather than pristine collectibles (I got them, one by one, to read, not admire), but the covers are intact, no pages are loose, and there is little or no physical damage other than the usual fading and wear & tear that comes to any well-handled book 70 or more years old. Remember also that these books were aimed at the juvenile market and were cheaply printed and bound.

If you have never read any of the Radio Boys books--or any of the other series (Railroad Boys, Outdoor Girls...) cranked out like cookies from the Stratemeyer Institute by anonymous writers under pen names, you'll be charmed. They really are period pieces, totally entertainng but full of stilted dialogue no human beings would ever utter and peopled with idealized characters who would make Frank Merriwether look like Satan. Of course, they are infinitely resourceful and physically imposing, and get themselves out of scrapes on every even-numbered page. And the heroes are, of course, white.

Five have dust jackets.

The price for all 16 is $200 plus shipping, which is very fair (the prices posted in Alibris, the biggest online seller of used books, would add up to well over $300).

Here are the titles. AC means the author on the jacket is Allen Chapman, GB is Gerald Breckenridge.

WITH DUST JACKET--
With the Iceberg Patrol (AC)
With the Forest Rangers (AC)
At the Sending Station (AC)
At Mountain Pass (AC)
With the Flood Fighters (AC)

NO DUST JACKET--
First Wireless (AC)
At Ocean Point (AC)
Aiding the Snowbound (AC)
On Secret Service Duty (AC)
In Gold Valley (AC)
On the Mexican Border (GB)
With the Revenue Guards (GB)
Rescue Lost Alaska Expedition (GB)
In Darkest Africa (GB)

Search for the Inca's Treasure (GB)
Seek the Lost Atlantis (GB)

Best, Avery W4OGK

I think you mean HC-6/U. They are available here and there, but if you want
specific frequencies, then go to International Crystal, JAN Crystal, or one
of the other suppliers who sells direct to the public.

>depends on the rig and the freq.

WRONG!! No ham rig can be used outside of the amateur bands, PERIOD!!
They are type accepted for ham-band-use ONLY. Read the rules...

Now, going the other way is OK; i.e., it is acceptable to modify a
commercial radio for amateur use. This might be Dave's best approach.

>Hope this helps whomever. Please don't flame me if I got some parts of this
>wrong, it's been 10 - 12 years since I dealt with this one.

You got a little bit of it wrong, Wayne. The pilot carrier served two purposes. Number one it cued the compandor in the receiver since the pilot level changed with companding level in the transmitter, it was really an audio tone injected into the compandor along with voice. This gave the radios characteristics similar to NBFM voice quality by compandoring the noise floor, IE a poor man's DBX. (The pilot didn't noticably increase occupied bandwidth. That's the part you got wrong.)

Number two, it served as an AFC reference for automatic fine tuning. This is what allowed the radio to be narrowband. In other words, it behaved to the user as if it were a NBFM rig with no fussy tuning required, but it only occupied the bandwidth of a SSB signal. So the spectrum savings was 13 kHz/3 kHz, or a 4.33 times reduction in occupied bandwidth compared to NBFM.

The compandoring trick would work with any SSB radio, but the AFC required modifications to the radio (receiver). That's no problem in manufacture, but amateurs generally didn't have the expertise to do this correctly. (Or they didn't care to do the modifications required.)

This was actually a pretty good idea. You could use the compandoring feature with any SSB radio and reap the benefits in noise reduction. For weak signals, the compandor would run wide open and the radio would be behave as an ordinary SSB radio. With stronger signals, the compandor would start to work and you'd get a noticable improvement in apparent SNR. Basically, it gives the SSB radio a threshold similar in effect to the FM threshold improvement. And all you need

is connections to the radio's mic and speaker.

To be able to work with handheld radios, however, it also needed the AFC feature to make up for their generally poor stability. Most FM HTs in the 80s were lucky to stay within +/- 1 kHz. If it weren't for FM capture, they'd be a nightmare to use. They were totally unsuitable for ordinary SSB in a flip the channel and talk fashion. (The system was originally targeted to land mobile users, not amateurs.)

Two things killed the idea in the commercial arena, first was the opening of 800 MHz trunked systems which relieved spectrum pressure, and second was the move to an all digital radio standard (APCO-25) for the next generation of land mobile radios. So the system got dumped off on amateurs. But amateurs have even less spectrum pressure, and were perfectly content with NBFM, so it flopped with amateurs too.

I've glossed over some of the *problems* that ACSSB introduces. There are some, and they are fairly intractable. But with today's DSP, most of them could be licked. But with today's DSP, most of the benefits are moot too since DSP already offers noise reduction without the need for pilot carriers or companding. ACSSB missed its market window, and that window is now closed by better technology.

Source record: 91434

Hi Gang

I have come across one of these valve ham receivers and wonder if anyone can offer some information about it?

It appears very well built and has all the options fitted including 2m and 6m converters. From its construction it appears to have been made in the mid to late 1960s.

Performance seems a bit poor with the calibration markers only reaching S3 on full RF gain and no S meter showing at all on the few ham stations received. Does anyone know these rigs? Are they worth getting back into good condition, is the performance OK when working properly, what components tend to give trouble etc? I suppose the first thing to do is to check all the voltage and resistance measurements quoted in the manual.

Advice welcome.

The FTDX-400 came out just before the FTDX-560. They are quite
similar. I believe the 560 was rated for higher power output. It looks
like the 560 and 570 and 400 twins.

593. PLL Troubleshooting

From: Doug Snowden <dsnowden@ncdc.noaa.gov>
Message-ID: <369A1F83.DEAC9FE@ncdc.noaa.gov>
Source record: 91440

I have been aligning an old Cubic Astro-102 transceiver. According to the manual, you are supposed to set the VCO oscillators on each band to 3.75 volts plus or minus .75 volts. When I do this the received signals
have a rough sound to them, like the PLL is hunting a lot to keep locked.
The freq does stay locked. It I adjust the voltage to something like a lower
2 volts or so, the PLL still stays locked and the signals are clean sounding.
But on cold startup the PLL will drift, apparently not locked. Could the error amplifier have a bad component changing the bandwidth of the loop? Any experience with this?

two heathkits on ebay. an APACHE with low pass filter. restorable, would be a nice rig if it wasnt that one side looks like it was left on a damp floor and thus has lots of surface rust. rest of rig looks good. maybe a paint job is all that needed.

second radio is a DX-40 with a copy of the manual. radio is complete and not beat up. meter is in place but loose, needs to be tightened in its bracket. small rectangular cover missing from rear (the one for crystal access). paint is flaking slightly off aluminum rear cabinet.

both radios on ebay, apache weighs 98 pounds so keep that in mind.

interested? go to ebay and use their search engine to look for "heathkit dx-40" or "heathkit apache transmitter" thanks robert

No, the 8640A is not a military set, just an obsolete discontinued
one. I bought one at Donnington Park (Leicester Rally) last
September with a known power supply fault in order to canabalise it
for an 8640B that I wanted to fix and improve. I only needed one
thick film amplifier module, the variable frequency modulator and
some knobs and front panel trim, so the major components are all
still intact. If you buy one and need something, let me know.

Regards,

No, just old. Looks like the last year it was made was 1991 for the 8640B. I doubt I can find a manual for one here (we do disk & laser printer stuff here), but I'll look around.

It is pretty straightforward, 0.5 to 612 MHz (with option 002 it can be doubled and go to 1024 MHz, look on the serial number label for option info, probably). Built in freq counter, can do AM or FM modulation. This info is from my 1991 HP catalog, list price was a mere $14,600 (+ $1255 for option 002). The service manual is listed as part number 08640-90215, operator manual looks like it has part number 08640-90208. I don't know if you can still order them though.

The HP 8640A is a commercial signal generator - no doubt used by the
military too.

IIRC the 8640A is a free-running device, the 8640B is a phase locked version
using a tuning motor and varicap to drive the cavity tuned oscillator. The
basic frequency coverage is 256-512MHz with some overlap at the ends. For
frequencies down to 1 MHz the 256-512MHz output is divided by 2^n before the
output amplifier. I think that there was a frequency doubler to increase the
range to 1024MHz

IIRC the instrument was manufactured in the early '80's and was (and still
is) a pretty good signal generator - particularly for those who can drive an
instrument that doesn't have a key-pad.

Sorry you got "flamed". As in all groups there are always a few turds looking for a safe way to dish crap out onto other people. Most of these people wouldn't say a thing if it were to your face.

I went through the same thought process you did with what radio to carry in the car. I ended up with both. More toys is better. If you have HF in the car I am on 17 meters most of the time. give me a shout...

18.150 or thereabouts.

Hi. I have a Grundig Majestic radio/record player for sale or trade. It is not in great physical shape. Unknown if it plays. It is neat, though. Needs some work on the cabinet. It has one external tower speaker. Receives am/fm/shortwave. $50 or equivalent trade value. Always looking for qrp HF ham gear. No computer stuff, please.
I can take some photos if you're interested. It is kinda big and the preferred method of shipping is to have someone pick it up. It can be trucked or I guess, UPS'd. About 3' high, 2.5' wide, 1.5' deep. Weight is about one 'grunt', plus packing.
Jim in Duvall, WA 98019

623. Tektronix Curve Tracer Adapter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-11 00:00:00 UTC
From: n6ax@pacbell.net
Message-ID: <xWAm2.17270$n4.133667554@WReNphoon2>
Source record: 91470

Adapter to test transistors on Tektronix 576/577 curve tracers.
Tektronix part number is 013-0098. More info available in Tektronix catalog.
Unit plugs into curve tracer and provides sero insertion force sockets for
single and dual TO-5 and TO-18
sized transistor packages.

Will sell for $40.00 plus shipping.

John

I am listing this for a friend.
For sale a Collins 51S1 winged emblem receiver in excellent
condition. It shows 9 out of 10 as the receiver has had very
little use. The cost is $1300 US plus shipping expenses.
Also for sale a Collins power supply model 516F2. Its' tubes
have been replaced with plug in solid state units.
Its' cost is $200 US plus shipping expenses.
Please Email Peter Christensen at christep@cadvision.com
Thank you. Peter

you could put a potentiometer in the circuit if you knew a
ballpark figure, just be sure you start with enough resistance in
case the circuit is over critical. When the right resistance is
reached, take pot out of circuit and measure with ohm meter. Of
course, if the circuit is current demanding, then I would advise
to accquir afforementioned schematic.

Illegal? Yes but maybe no.

To run it on it's designed frequency....yes. That class of CB service no longer exists and because of the modulated oscillator, it transmits a combination of AM and FM.

If you have a ham license, I don't think there would be anything wrong with moving it onto the 420 MHZ ham band and experimenting with it.

Boy, that brings back some memories. Back in the 60's, I had a pair of them. On the ground, I couldn't get any more range than about a city block. Acutally, the radiation from the super regenerative receiver

went about as far as the transmitter.

One night, I talked a friend of mine who was the guard at the Iowa State Capitol building into letting me go all the way to the top of the main dome with one of the units. Another friend had a unit about 5 miles away on a high hill. We communicated that 5 miles.

Stewart Warner made a walkie talkie that you held up to your head like a telephone receiver, that operated on that band. I have only seen one pair of those units.

Source record: 91375

According to DejaNews there was a flurry of discussion about
the 50's era Vocaline JRC425 UHF transceiver on this group
back a few months ago.

I have acquired one of these, with matching mic, all in decent
condition. I will capture and archive the past discussions
for my records.

One person mentioned that one of these had found its way on
to the infamous eBay auction site. Anyone remember what it
sold for? I am curious as to current collectable value.

My reason for acquiring this classic is to set it next to the
state-of-the-art JRC JST-245 I am hoping to acquire used in
the near future ... just for the grins and giggles of the contrast!
The Vocaline can be a paperweight for printed materials
associated with the JRC! :-)

BTW: Anyone have documentation for the Vocaline JRC425?
I'd love a scanned, photocopied, or original copy of a manual,
schematic, etc.

NOTE: I am told that it is illegal to operate this rig because
it has a modulated oscillator. It's been a while since I looked
at the regs, is that correct?

Happy New Year!

Are you setting the synth data to the correct freq before you set the VCO?

Look at the VCO voltage with a sccope. If it looks rough, trace back
through the loop filter to the input of the op amp. It may be that a cap in
the loop filter has changed value - try bridging caps to see if the loop
will settle down. If this doesn;t help, look at the input of the loop filter
op amp or output of the phase detector to see what the signal looks like -
should be very narrow pulses at most. If it looks more like a square wave
the loop is unlocked. Also look at the ref freq and the divide by "n"
output to make sure that they aren't screwey. Chances are its a bad cap or
resistor in the loop filter, a funky op amp (or noise in the op amp power
supply line), or a phase detector chip on its way out (thermal
intermittent). Good luck - John

I have an original (not a copy) Knight Kit Ocean Hopper manual. From a scale of 1 to 10 Best, it is a 6.9

Some pencil marks(check marks, name of builder?), crease in middle, normal wear and tear. All of the pages are there though and very readable.

Sorry the original radio is unfortunately not in my possesion, it was sold years ago.

I am open to offers and interrested in any Heath items for possible trade.

Thanks,

Chris "KX0Y"

645. FS: Estate Radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-12 00:00:00 UTC
From: Marv_E_Ads@Juno.com
Message-ID: <77ejgqqd1@nnrp1.dejanews.com>
Source record: 91382

Estate Sale Radios... listed more or less by year of manufacture...

Stewart Warner 345 TRF (1926) outside good, inside immaculate w/all tubes
$250

RCA Radiola 18 TRF (1927) good looking wood cabinet w/all tubes and
copy of service manual. $200

Several Atwater Kent model 40 TRF's (1928) ranging from abysmal
to perhaps... functional condition $50 - $150 ea

Pilot AC Super Wasp (1928) MW & Shortwave Superregen, has no case
that I'm aware of, lotsa coils (more than would be in a complete set...
but, I'm not sure if the set is complete!... also have a big bag of
unwound forms that fit this model) xerox of schematic. $300

National 1-10 (1936) with the original instruction manual! It covers
1-11 meters and has 4 tubes; two of which are acorn types. It has a
typical National HRO type dial on the front and uses plug-in coils
which we haven't found .... yet. $150

Hallicrafters SX-28 (1941?), parts unit? looks fairly complete except
for tubes & outer cabinet but, probably non-functional. $50

Two Nationals "HRO's" (194?) in partially "stripped" condition circa 1940?
Looks like the two of them could just about be made into one complete unit.
They use a plug-in coil set to cover 3.5-30 MHz in three bands.
There is one 3 coil set in a wood storage case.
The two radios are of slightly different construction, one is missing
the front panel. I didn't know there were so many variations of that model..
.one may be an RAS. No cabinets on either unit. There is also a box of
spare National tuning capacitors. $75 for both radios including the coils.

National RBL-2 VLF (15-600 KHz) (1944?) Navy receiver kinda rough
(maybe it went through a war?) but, seems complete except for the dial
plastic/glass. 76 lbs.! $38 (50 cents a pound!)

Hallicrafters S-38 (1950?) non-original knobs, missing phone jack, a couple
of holes drilled in the top & bottom of the case to adjust the IF xformers and
padders without opening up the radio. With hand drawn schematic. Working! $75

Hallicrafters S-53A (1958?), very clean; I think the miniaure phone jack on
the right side is "aftermarket", w/copy of Sam's service manual. Working $150

... and some non-radios...all functional...

Hewlett Packard 461A, 1 KHz - 150 MHz Amplifier,
50 ohm in/out, switchable 20 & 40 dB gain. $75

DataPulse (Systron Donner) Model 101, 50 MHz Pulse Generator, $150

Tektronix P-6042 DC-50MHz current probe, $200

Shure M68 Mixer, 4 mike inputs plus auxillary $125

All of the above plus shipping if necessary, naturally! :-)

Contact Marv, WC6W, 310 649 3111 (reasonable hours Pacific

>frequencies down to 1 MHz the 256-512MHz output is divided by 2^n before the
>output amplifier. I think that there was a frequency doubler to increase the
>range to 1024MHz

The 8640M and 8640B can be phase locked, but only in fairly large steps.
There is no motor. You tune manually, then switch to lock. There is
a fine-tune knob as well as the main knob that covers an octave.
There are banks of filters to get the divided-down square wave cleaned
up and pretty low harmonic distortion. It covers to just below 455kHz,
to get the common low freq IF. They also have a pretty decent attenuator
for low-signal outputs...I assume the 8640A does as well.

The set was HP's first non-tube RF generator, or nearly the first, and they
were keen on upholding a reputation. There are a few HP synthesized
gens that have lower phase noise, but an 8640 A or B in good shape is
no slouch in the phase noise category. If you can find an 8662 at a
reasonable price and it's in good working shape, by all means get that
for exceptionally low phase noise (and very fine frequency control...
fully synthesized). There was a good article in the HP Journal on the
8640, and it may possibly be on their web site (though unlikely).

73,
Jay

650. R-1051: need source for roller chain

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-12 00:00:00 UTC
From: xfrosch@ci75554-b.nash1.tn.home.com
Message-ID: <slrn79lrme.1or.xfrosch@ci75554-b.nash1.tn.home.com>
Source record: 91387

Picked up an R-1051G at Fair over the Thanksgiving holiday. Had a great time playing with it (to the detriment of my wrist joint and carpal tunnel) until the unit kHz knob stopped doing its thing, whereupon I went in with a screwdriver to look at the guts.

Somebody had replaced the micropitch roller chain on this digit with some contraption made of rubber cement and chicken wire, which had decomposed past the point of utility.

I fear to contemplate the circumstances under which the original chain went missing, or the state of mind in which someone might have replaced it with the distended hair roller that's in there now. All I want to know is where I can get roller chain for this baby so that I can put this sordid chapter of my life behind me.

oh, and any chance of getting a control head for this beast? Much DXing with this radio, and my piano-playing days may be over.

Source record: 91389

Hi Simon.
the Hp8640B-opt-323 solid state sig-gen is the mil version.
You can get a copy of the hp8640B-opt 323 manual from Ed Matsuda for $45.00
plus shipping. He is located in San Diego, Ca.
His phone Number is 619-479-0225.
I'm sure that he has a copy of the HP 8640A Manual.
I have a friend Jim Dicso who sells the Hp-8640B-OPT-323 version. I bought mine
from him very reasonably. His email address is: jdicso@cisco.com .
If you email him tell him that I told you to contact him.
Good luck, Hope you find what you want.
73 de Mike Tyler, K6STU.
P.S.
Checking my Tucker catalog the 8640A sells for $1295.00, the 8640B for$1595.00.
I think that you should email Jim and see what the remarkable difference is in
the price for the 8640B Mil version that he sells.

657. Help, cable TV converter box

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-12 00:00:00 UTC
From: "Wayne K. Irwin, W1KI" <w1ki@arrl.org>
Message-ID: <369B4C6D.20CA@arrl.org>
Source record: 91394

Hi Folks,

I posted this request to a different series of newsgroups (dealing with cable TV) without any success. Knowing how some hams can be packrats and save almost everything, I thought I would try the rec.radio groups.

About 3 years ago I purchased a cable tv converter box for a tv that is not cable ready. I have lost the user's manual and cannot program it. If anyone has the user's manual for the following converter box. I would be glad to pay the reasonable cost of copying it.

The converter box was purchased in a discount department store. It is made by RECOTON and the model number is V 642. The nomenclature on the front says 83 channel remote control cable converter.

Please e-mail to the following if you can help. Thanks in advance.

w1ki@arrl.org

664. Re: R-1051: need source for roller chain

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-12 00:00:00 UTC
From: flegler@pilot.msu.edu
Message-ID: <77ftgl$h97$1@msunews.cl.msu.edu>
Source record: 91401

I had an R-1051H with the same problem. All the chains in my R-1051H were the plastic type, and one broke! I checked dozens of sources with no success. Finally, I wrote Fair Radio and they said they could pull a chain (stainless steel) from a junker R-1051B for $15. You have to remove the stainless chain carefully in order not to damage the coupler. The stainless chains are better. All the chains from the R-1051 series are interchangable, but you have to be sure you get the one for the correct digit because they are of different lengths. Or if you prefer, Murphy's Surplus in San Diego is selling R-1051's for $125 (unchecked). That way you will have many spare parts.

You might be interested in knowing that the R-1051G and especially the R-1051H along with the Harris R-2368 (the military version of the Harris RF-590A) are the main radios of the Navy right now. They are however in the process of replacing all the R-1051 series radios with the R-2368

There is no remote tuning head for the R-1051 series as far as I know. That may be why the Navy is going to the R-2368. They use these in large banks of radios with computer control in order to automatically scan channels, and for frequency hop, etc.

I hope this information will be helpful.

Source record: 91407

For Sale:

MFJ 752c Signal Enhancer Dual Tunable SSB/CW Audio Filter.

Primary Filter:
Two section four pole variable filter which has PEAK, NOTCH, LOW PASS, and HIGH PASS functions.

Auxiliary Filter:
Single section two pole PEAK and NOTCH filter.

Front Panel Controls:
Power Switch which selects power OFF, power ON, SSB noise limiter, and CW noise limiter.

Function Selector selects PEAK, NOTCH, LOW PASS, or HIGH PASS in the primary filter section.

Selectivity controls (2) adjusts the bandwidth of the primary and auxiliary filter from 40Hz to almost flat.

Frequency controls adjust the center frequency of the peak, notch and the cutoff frequencies of the LOW PASS and HIGH PASS filters approximately 300Hz to 3000Hz.

It has a 2watt audio amplifier. It will operate on 9 to 18Vdc. It has two switch selectable inputs for two receivers. Headphone and speaker outputs.

Excellent condition. With original owners manual and carton.
$40.00 + shipping.

Email: rwalter7@aol.com
Thanks.

Bob

Mark OM,

Perhaps the sellers are only interested in reaching someone who knows what the item is already, a limited audience. It is a kind of filter. Sometimes the seller is less interested in just finding a buyer than finding a buyer for whom this item is known already, and appreciated. I know I have sold items that I preferred to go to appreciative buyers who have knowledge already of the item. Nothing wrong with that; it's a way of keeping things in the 'fraternity' so to speak.

73,
Don, W6JL

Hi David OM,

I don't have the 10 in 1 kit, but it sure brings back memories, and I too would like to find one.
That was my first foray into building kit gear, and I was hooked from the moment I opened the box
in early 1955. Remember the theremin, and the other devices you could build with it? I built them
all. Next thing you know, I was taking the Novice code test. Many Heathkits have followed over the next
43 years, along with lots of homebrewing which continues today.

679. Identify WWII shortwave

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-12 00:00:00 UTC
From: Tom Padula <tjpadula@nospam.engr.sgi.com>
Message-ID: <369BC1AB.794B@nospam.engr.sgi.com>
Source record: 91416

I'm trying to identify and locate schematics for a pair of old, WWII vintage (I think) 6-band shortwave receivers. I've had them for a number of years, and while one works to a certain extent, it needs refurbishment, and the other needs to be brought back to life.

I don't know the model number, just that it was made by RCA for 'US Army Signal Corps' according to a sticker inside, which also lists lots of patent numbers.

The radio is about 19" wide by 10" high by 10" deep, steel case, black. The faceplate slides out of the case with the guts, held in with two large thumbscrews. This radio is equipped with a 120V supply, but can be run off batteries via an 8-pin connector.

The tube list is:
VT-91 (6J7)
VT-86 (6K7), three of these
VT-65 (6C5)
VT-93 (6B8)
VT-70 (6F7)
VT-152 (6K6 GT/G)
5U4 GB
plus an RCA 991 neon lamp.

The bands are 200-500 K.C., 1.5-3.5 M.C, 3.6-6.0, 6.0-9.5, 9.5-13.5, and 13.5-18.0.

Controls: Top half has a CW osc switch, a crystal out/in knob, and a large bandswitch/freq dial. Bottom half has headphone jack, AVC/Off/MVC paddle switch, 'Increase Vol' knob, beat freq tuning knob, the tuning knob, and an antenna alignment knob. Antenna and ground terminals are on the bottom right of the faceplate.

I have another one similar to this one with a RF meter of sorts and a different audio output stage, using an additional tube (to drive a speaker?). It also has a XMit/Receive cutout switch. That one doesn't work, and I'd like to fix it.

Anybody know just what these are? If they're military and really from WWII, then I'd expect to see lots of them. Maybe I just got lucky stumbling across these two similar units in different places. Also, if anyone knows what the crystal switch is supposed to do and why the AVC/MVC has an off position (standby while transmitting?), please enlighten me.

Thanks for any help or pointers.

(Reply on the newsgroup or remove the 'nospam.' from my address to reply directly, sorry for the inconvenience.)

From: Xjshillw6ivw@earthlink.net
Message-ID: <369bdac5.23274560@news.earthlink.net>
Source record: 91422

I'm involved in replacing filter capacitors in a National 5880AB power supply, used to power a SW-3, and have some questions.

How many and what value filter capacitors were used originally? It looks like the original capacitors were in a can 3" in diameter, judging from the clamp. The original was replaced with 3-8 mfd 450V can electrolytics. An 0.01 uF capacitor seems to be potted in the tar and connected between the filter input and ground using light brown wires. I checked the capacitance with an impedance bridge. The four wires to the chokes are small diameter, insulated with black spaghetti, so no confusion there.

Message-ID: <19990112194231.08425.00010644@ng-fu1.aol.com>
Source record: 91338

This is a radio that goes all the way from LW (150kHz) through the shortwave bands up to 30MHz, plus FM. It has been out of production for some time, but was lavishly praised in Passport to World Band Radio for several years after it was no longer sold as a radio to try to find. A major reason is the audio, which is unusually good thanks to its two speakers and its size, which is relatively large.

It's got digital readout, memory recall, tunable BFO for CW and SSB, and lots of other features.

It has no electrical problems whatsoever--I've used it as a bedside radio since I got it--and in appearance it is barely distinguishable from new. I don't like to describe a radio as "mint," since it's a term that should be reserved for out-of-the-box condition, so I'll just say that it's in excellent shape.

I searched for a good three or four years before finding a D2999 in this condition and will be sorry to part with it, but I have my eye on other toys.

Price is a firm $200 plus shipping. If I get no takers on the newsgroups, off it goes to ebay.

Best, Avery W4OGK

>of years, and while one works to a certain extent, it needs
>refurbishment, and the other needs to be brought back to life.

Sounds like a BC-348 to me. There USED to be loads of these
around, but not much anymore. The unit with the meter and the
extra tube has been "ham modded" with a few very popular mods
that came out in the 50's and 60's for these units.

Not a bad radio, really.

Take a look at my web page, it has a photo that will confirm
wheter this is indeed a 348.

Message-ID: <77h96drpg1@nnrp1.dejanews.com>
Source record: 91345

FOR SALE

Johnson 6N2 missing ONLY THE METER as best I can tell. (I have information on a meter that may be available in a parts unit if you are interested.)

The front panel and knobs are in pretty good shape...I suspect the panel would be a good 8 or 9 with some cleaning and polishing and the knobs look very good.

The case is without dents except for one corner that needs some reforming (upper left). Take a look at the picture.

The tubes are all there, including the 5894, but they are untested and the only things I know are missing is the hatch for the crystal socket, the screws for the case and the meter. There's even a crystal included with it.

This is a chance to have that unit that goes with the Ranger and later Johnson HF rigs or even the earlier Viking I or II. Restore this and you'll have the entire transmitter coverage from 160 meters through 2 meters! Just like the 1950s!

$40 plus you pay shipping and insurance if you want it. It's relatively light and I'll pack it well.

Pictures are at:

Last day of bidding - here's your chance to get the EV sound at Allied Knight price!

ElectroVoice made this mic for Allied Radio (KN-4550) by slightly modifying the appearance of their famous 664. Other than missing the ElectroVoice name, it IS an EV-664. I am offering it with a stand and cable. I am using it with my Collins gear now.

Please check it out:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=54586158

If the winning bidder is serious about it, I will even supply an EV-664 switch plate for him to replace the Allied/Knight plate - all it will take is a screwdriver!

Thanks,

Al - K8EUR

713. FS: 3.2KV Plate Transformers, Two IDENTICAL Units Available

Newsgroup: rec.radio.amateur.boatanchors

For Sale: Plate Transformers, 115V Primary / 3200 V Secondary, 5 3/4" W x 7 1/2" D x 7 1/4 H ,38 lbs each, potted. Two identical transformers available, Buy both, series the primaries for 230V, and parallel the secondaries for more current. Secondary current rating is not known. The dc resisances are 370 ohms for the secondary and 0.35 ohms for the primary as measured on a Fluke laboratory multimeter with a low ohms scale.

See photo at http://www.3dnet.com/mike/plate_trannys.jpg

Good condition.
$60 each or $100 for the pair, plus shipping from Reston, VA, zip 20191, prepaid only.

Mike Nowlen WB4UKB
703-716-1363 until 10 PM eastern

>Rare? Useful?

Hello Bill & group,

I've got one of those, too - and the original manual, copyright 1961.

Ratings:

Output: 250 VDC, 100 ma (ICAS)

Input: 16 volts max, 12.6 volts nominal @ 3 amps for full power output
(connected for 12 volt input) OR 8 volts max, 6.3 volts nominal @ 6.5 amps for
full power output (connected for 6 volt input)

Vibrator: Mallory type 1610 or equivalent

Rectifier: Two silicon diodes in voltage doubler.

This is an extremely simple unit that will work off of 6 or 12 volt input - but
it requires wiring changes to do so. Input polarity is unimportant. There is
some hash filtering on both input and output, and a 20 uF filter cap on the
output. There is no fusing or power switching - as soon as power is applied, it
makes HV. Regulation is not very good - no load to full load variation is 100
volts or so (?).

I've had mine for years - so long I can't remeber where I got it. I think I
found it as an unbuilt kit at a hamfest 15 or more years ago for about $3, and
not knowing any better, brought it home and built it. Worked perfectly right
off. I didn't like the poor regulation, and I already had a few nice
dynamotors, so I made a slight (and totally reversible) modification - I
brought out the secondary leads of the transformer to an AC socket, because the
secondary voltage is just about 115. Voila - a 25 watt AC inverter to power a
GDO or other small piece of hollow state gear. The output frequency is about
115 Hz, though, not 60 Hz, and it's a square wave. If I ever need it for its
original purpose, it can be unconverted in a few minutes.

Here's an idea for you, Bill. I don't know what voltage that little RX you
built needs (recent issue of ER, GREAT article!!) but the GP-11 should run it

easily. If 250-300 volts is too much, replace the voltage doubler with a bridge rectifier and you'll get 125 - 150 volts out of it. If you go on FD with a group, you can have a ton of fun with those two - here's how:

On Field Day, you can earn 100 bonus points by copying the W1AW FD message. There is a special 10:00 AM bulletin (CW) on FD Saturday morning, too. What you do is to bring along the little receiver, the GP-11, a pair of cans and a hank of wire. A little before 10 AM you toss the wire up in a tree and hook up the little receiver and the GP-11 to the wire and your car battery. (Test it all out beforehand, of course). Copy the message on 80 or 40 meters, and you've made the first 100 points for the group, no sweat. I've done this for several years with a local group, only using a BC-453/converter combo powered by a dynamotor. Always draws a crowd.

>Anyone know anything about a Johnson Transmitter (Challenger??) that used 3
>of the 6146 tubes?

Hello Ron,

The Johnson Valiant and Valiant II used 3 6146s in the final and two in the modulator. 275 watts input, VFO with plate modulated AM and CW in an 85 pound package. A desktop unit, but you need a STRONG desk.

The Johnson Challenger is a much smaller rig that used 3 6DQ6Bs - two in the final and one in the driver (!). No VFO, and screen modulated.

Source record: 91297

Hello ! Thanks for reading this message ! I'm looking for information about RACAL manpacks. I have the MA4040 in repair for a friend of mine. I'm lacking schematics. Somebody has any information about this rig. Even the wiring of the plugs on the front could help me....how to connect an external power supply...how to charge batteries ?

Thanks a lot !

Paul

Source record: 91301

Anyone out there have the steps for aligning the transformer associated with the selectivity/crystal phasing for this National receiver...?

I have the schematic and am fairly comfortable with doing the remainder of the alignment by "using the force", so to speak (standard 455KHz single conversion approach). Just this one spot has me wondering a bit. Thanks in advance for any responses.

C.K.

753. Questions about DX100 Mods

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-14 00:00:00 UTC
From: Bill Todd <bill@willapabay.org>
Message-ID: <sGqn2.62$IG4.781@news6.ispnews.com>
Source record: 91304

Hello fellow AMers -

I just picked up a DX100 (it is NOT the 100B). It looks like the previous owner did the "Loading Control Modification" with the MK-3.

It looks like this previous owner also did the "Improved Keying for the DX-100" mod (I believe this was from the Feb 1958 QST article), where you add another meter on the right side of the front panel.

The rig seems to work just fine on CW, and it puts out a bunch of power!!.

Question: I am trying to use this rig on 75 meter AM phone, and the rig does not seem to work on AM, i.e., no audio. I am wondering if this "Improved Keying" mod in some way disables the AM function of the rig.

Any ideas folks?

Thanks - Bill-N7MFB.

Jeez, anymore?

HELL YEA !!

Some ebay funnies pulled off different NG's. I added a few. I'll bet you can add some more....

"Hurry on this one! "

(ummm, if I do, will it end sooner?)

"Serious bids only"

(oops, I was about to toss in a desultory bid before I read this....)

"Bid High and take it...."

(thanks for the selfless advice. I thought it worked by 'lowest bid takes'.)

"Only _____hours /minutes/seconds left!! Hurry!!"

(= "why don't you morons realize what a fine item this is and get serious about offering me some money, so I don't have to remind you 3 times a day?")

"Mint Condition"

(you'll need a Mint just to get it)

"Was working but must sell it as untested"

(uh huh)

"In excellent condition but missing a few tubes"

(...and capacitors, and resistors, and inductors...)

"Tubes tested good!"

(...everything else tested bad?)

"I'm selling it because I don't know much about tubes or electronics"

(uuh huh - I'll just ignore that 30 yr old Extra Class call your using as your Ebay handle)

But seriously....

Have you noticed... no one is paying state taxes? .... How long you think that's going to last...??!!!

Do Ebay a favor and email you state rep that you just found a new source of state revenue...! hehehehe

Source record: 91308

Have for sale a clean Collins 30L-1 Winged Emblem- which is in excellent physical condition and operating condition. Would rate as a 8-1/2-9. Has a little wear mark where the hole to the lid is.(Finger hole.)Front panel is flawless, knobs are not scratched or disfigured, inside is real clean. Outer cabinet is also real clean.
Full rated output. Currently wired for 120Vac. Original 811A type tubes. I am the second owner and have had for a number of years. HV electrolytics were changed about 3-4 years ago. Shows 2KVdc on voltmeter. Orginal Owners manual. "N" connector adapter included.
Reason for selling - don't need 7 amps. Price -$550.00 plus shipping.
73 de Dave K4DLJ

hello,
I "inherited" a Heathkit SB-101 but didn't get a manual.
Does anyone have any documentation? Would anyone be willing to
copy pages? Does anyone know where I can purchase a manual?

The unit seems to be in good shape but one of the tuning
rubber bands has broken. If the band is broken,
does the replacement procdeure include alignment?
Anyone know where I can find a replacement part?

Does anyone know anyone who can reliably service the unit?

BTW, I have not been active for quite a few years.
I hope this unit will get me interested in the
hobby again.

Perhaps we could start an ad-hoc group to record the sellers names, prices collected, etc. and mail that info to the IRS. Might help some of our non-collecting profit taking friends with their record keeping!!!

>These filters are pulled from surplus equipment.
> 2(ea)F 300 X 68 p/n 526 9307 00
>2(ea)F 300 Z 4 p/n 526 9312 00
>2(ea)F 300 Z 5 p/n 526 9311 00

F300X-68 526-93307-00 sym CF=300 kHz BW=6.5 kHz @ 6 dB
F300Z-4 526-9312-00 upper CF=300 kHz BW=2.65 kHz@ 2.5 dB
F300Z-5 526-9311-00 lower CF=300 kHz BW=2.65 kHz@ 2.5 dB

These were from surplus military radios, but I am not sure which ones.
Note the 300 kHz center frequency. All of the amateur equipment by Collins
usually uses 455 kHz filters. These filters should be fine for those
building homebrew rigs, however.

Gents,
I have an R-5 vertical with spare 10/12/15 meter trap assemblies. It is in good shape but could use a good wash down with a Scotch Brite pad if you want it to look shiney again. Orig. manual and sales receipt.

Want to trade it for a Butternut HF2V vertical that is in like or better condx. must be very useable.

As-is unchecked:

Eico Cap. sub. box model 1120. Looks okay. Really dusty. no manual. $10.00

Heathkit model IN-37 res. sub. box. Looks better than the Eico. No manual. $10.00

Take both for $16.00.

also have a 8uF 4kvdc oil filled cap. The same size that fits the Ha-10 Warrior amp. Around five inches tall or so. A few inches deep and around 5 inches wide. $25.00. works great.

all items plus shipping.

This note ought to stir up the "pot" just a bit, but I can't help it.

Am I the only person who has noticed an unfortunate trend on this list?

Why do people clutter up this particular boatanchor's list with references
to an ad they placed on ebay? Obviously, the poster is trying to increase
their chances of selling their stuff.

However, If anyone on this list was truly interested in going to ebay and
looking at YOUR particular ad, they would do so.

In other words;
WE DO NOT NEED PROMPTING FROM A SELLER TO LOOK AT AN
ADD THAT WAS PLACED SOMEWHERE ELSE!

Your overpriced gear will sell without wasting bandwidth - trust me.

I don't mind short E-bay notices. I got a super deal on a SP-600 that I wouldn't have known about if I hadn't seen a short notice on the newsgroup. I appreciate the notices that tell me in the "Subject" line what is being offered. That way I can decide to look at or delete the message.

I also appreciate the people who put FA in the subject line. If I'm not looking for any auction (E-Bay) stuff, I just delete without reading. What could be simpler? Life's too short to sweat stuff like this.

Bill,

Speak for yourself !

I for one am always in the market for radios so welcome ads even if I have to click on a link to Ebay to see it. Yes, it helps the seller, but it also helps the BUYER.

It also gives people a way of putting pictures of their radio on the net without taking up room on the newsgroup. Would you rather people post pictures of their 'for sale' radios on this newsgroup?

Chill out.

Brian

795. KnightKit T60 - Need Schematic and Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-15 00:00:00 UTC
From: Doug Person <DougPerson@ibm.net>
Message-ID: <77nlht$2390$1@rtpnews.raleigh.ibm.com>
Source record: 91237

My entry point into real boatanchor restoration begins with a KnightKit T-60 transmitter and a Lafayette HE-30 receiver, both of which represented my first store-bought novice station CIRCA 1963. The T-60 is non-functional. I really need a schematic and possibly even the manual. Anyone who could help me out will receive my deepest appreciation! I would gladly pay costs of copying and mailing.

Thanks,

Doug -- W4DXV

For Sale:

Fluke 8020A 4 1/2 digit DVM. (still the most accurate handheld they make) Measures AC & DC volts, amps (2 amps max); ohms, frequency (to about 200Khz, I believe), and db.
VG condition, case, leads, no manual. $200 OBO.

Valhalla Scientific 2010 digital power analyzer. Measures volts, amps, power from DC to 40Khz. Always shows true rms watts + either volts or amps. Will handle 300V and 20A max to 6000watts max from DC to 10KHz. (2 amps max from 10Khz-20Khz for 600watts max) Calibration verified Sept 97 by lab. Primarily intended for measuring true rms power usage on AC equipment. Great for finding out what the various things plugged into the wall Really use in the way of power. Have manual and homebrew AC test jig. $600 OBO.

> "Only _____hours /minutes/seconds left!! Hurry!!"

This is actually the stupidest thing that a seller could possibly post to Usenet, given that the amount of time it takes posts to propogate out through all of the news servers out there means that many people won't see it for days, and probably not until after the auction is over. Just shows how ignorant some individuals are about how the Internet works.

Okay, I'll retract this -- it's actually the second stupidest thing a seller could possibly post. To see what got first prize, do a search on "Commodore" and note that someone has a starting bid of *$8,500.00* on a "rare" 1541 disk drive (for true collectors only)...

(Ob:boatanchors... I suppose that a 1541 could be considered one as far as computers go; those suckers are heavy)

> Have you noticed... no one is paying state taxes? .... How long you think
> that's going to last...??!!!

This is an interesting point. Of course, they've been fighting over this long before eBay, what with mail order firms already having been selling to out of state customers all these years. But at least they can collect taxes from customers within their state, which is not the case for eBay. And it gets even more nebulous when you consider that eBay users are a mixture of businesses, pseudo-businesses, and private individuals selling something one time. How do you apply tax laws in such a situation...?

C.K.

Source record: 91240

> Have you noticed... no one is paying state taxes? ....

Please-- Speak for yourself.

I do a lot of business on Ebay and
I'm adding the columns and scribbling away on my
Texas state sales tax right now. I pay 6+% sales
tax on every Ebay sale to someone in Texas,
just like any other Mail Order company must do
(mail order companies don't pay sales tax
on items sold out-of-state).

Anyone who thinks they are "too smart" to get caught
cheating on taxes is going to get a big surprise one day.

If you do business on Ebay, be smart..
Pay your state and federal taxes.
At least in Texas, the business paperwork isn't that bad,
the bill isn't large and the PENALTY for not doing so is nasty.

Secondly-- Ebay is NOT the seller, so Ebay isn't liable
for sales tax. Your local mall doesn't pay sales tax
for the merchants who use it. They only provide a
vehicle for the sales. Same with Ebay. The seller is
liable for the tax.

Kind Regards,
Dave Stinson AB5S

Is anyone familiar with an R-303-SRR receiver? Comes with a
PP445 FRR power supply? described as heavy.
I was offered this pair but it's a 60 mile drive to look at it
and I'd like to have a clue if it would be worth the drive.
Thanks, Craig

> to an ad they placed on ebay?

I agree completely, but apparently I am in a minority on here. Far too many BA ng users are more interested in getting top dollar for their junk than they are in preservation of BAs.

While we won't see an end to either ebay(ack ptui) or the posting of ebay(ack ptui) notices, it should be standard netiquette by now to begin every auction post with FA: to allow easy filtering or ignoring.

Here's _my_ take on ebay(ack ptui):
o I don't use it.
o I don't do business with people who use it.
o I don't want to hear about it.
o I especially don't want to be forced to hear about it.

I got an email the other night from a confirmed ebay(ack ptui) addict who expressed gentle concern about why I didn't like his unfortunate destructive pastime. I'd like to suggest this --

If you have a belief that is firm and unswayable, would you want somebody screeching to you that your belief is wrong, and their belief is right?

Think about it -- if you were a Christian and a Shi'ite Moslem shouted "Allah Akhbar!" in your ear for an hour, then gently asked, "but what's wrong with Islam?" how would you feel?

If you were a Democrat, and somebody shouted "Impeach Clinton!" in your ear for an hour, then gently asked, "but what's wrong with Republicans?" how would you feel?

If you were black and the Klan burned a cross in your front yard, then gently asked, "but what's wrong with white supremacists?" how would you feel?

If you were white and Huey Newton and Malcolm X held a Black Panther rally in your front yard shouting "Power to the People, death to Whitey", then gently asked, "but what's wrong with black power?" how would you feel?

If you were a no-code ham and the QCWA set up a multi-multi CW station during VHF Sprints and squashed your ears from 160 meters to 1296 for a weekend, then asked "but what's wrong with code?" how would you feel?

If you were an average citizen and a bunch of dope pushers set up an open-air drug market in your town, then asked "but what's wrong with dope?" how would you feel?

If Howard Stern came into your living room and held forth his usual rant for a day and a half, then asked "but what's wrong with free speech?" how would you feel?

Now that I've gone on with a number of examples, some serious and some silly, here's my point -- to some extent, we have a right to free speech. To some extent, we have freedom to do as we please. We don't have a right to offend others, and we should respect the rights of others to be let alone. After all, my right to swing a fist stops short of the end of your nose.

In none of my examples did the transgressors ask whether they could do what they did. They just did it, offended, and then asked, "but what's wrong with what I feel?"

So what's wrong? We don't want your ebay(ack ptui) crap. It's probably no more reasonable for us to say "no" than it is for you to keep SPAMming. Regardless -- simply start your ebay for-auction posts with FA: and we can easily filter or ignore. That's a reasonable middle ground that's fair to everybody.

Oh -- and if you happen to dig ebay(ack ptui) it will make it easier to locate the auction posts! So there's actually a significant benefit for both sides.

BTW -- if you are using a newsgroup whose charter specifies non-commercial messages, an ebay(ack ptui) notice violates the charter because it's commercial speech that benefits ebay(ack ptui). You could be subject to a PLONK from your ISP for usenet abuse.

My sentiments precisely. If I can identify the message deals with ebay, I don't bother to read the message. Sometimes I can't tell until I get to the message. Then I resent having to go to it to begin with. The same thing could be said of a great many message subjects however - a lot of bikering and 'nasty pills' have nothing to do with boatanchors. But hey! Guess with no police force, everything assumes the worst possible state. Don't like it but.....

You're absolutely correct; I forgot about that. So you'd almost think that the IRS could, if they wanted to, track the sales volumes of individuals here for auditing purposes. Scary thought that buying and selling on eBay actually places all of the "black market" activity contained within to a much easier (more central) point of observation...

Still annoying to have to weed through all of the link posts here, though. Nothing wrong with the occassional "for sale" post, but I would rather see more knowledge getting passed around...

> noise? What's wrong here? Would appreciate any help. Thanks.

First of all, *why* did you replace the two IF cans...? And why did you rewire the headphone jack? Why did you perform both of these tasks at the same time, rather than verifying the work on the IF before going any further...? You simply multiplied the complexity of the troubleshooting task by taking this approach...

As far as fixing the problem, though, you're pretty much faced with getting a signal injector and, starting from the speaker (or the headphone jack), working backwards...

C.K.

Doug;

I still have my original T-60 and manual from 1962 which I could copy for you. However you can buy "professionally made" manual copies through several sources: Hi-Manuals, W7FG Manuals, NI4Q Manuals to name a few. They advertise in QST, Electric Radio. Also you might want to check their web sites.

RARE AND DESIRABLE, VINTAGE SWBC ITEMS FOR YOUR SHACK!

1. WORLD RADIO TV HANDBOOKS!!! Complete your collection's gaps now!
-- 1965 (hardbound!) - beautiful shape, $45
-- 1968, 1969 - poor condition, $22 each
-- 1970, 1971, 1973 - vy rough condition, $16 each
-- 1974 thru 1979 - nice condition tho used, many covered with clear
plastic contact paper, $14 each
 1980 thru 1988 - fine to near mint condition, $12 each
-- 1990 thru 1992 - near mint condition, $11 each
-- 1995, like new, $10

2. "NUMERO UNO" weekly private DX newsletter: Wow, a complete run of
issues from the heyday of this legendary DX weekly, from 1972 - 1984!!
Three binders, 3-inches thick each, jammed full of DX news, pioneering
reports on rare stations, feature articles, controversy, you name it.
Finally, you can now see just what all the noise was about and read what the
"elitists" (hi!) were up to! Full-sized 8.5 x 11 sheets, a stack of paper
9-nches thick, 600 issues. Won't break this up, to be sold as one lot.
$250 firm.

2. FINE TUNING: Again, a mother lode of early issues from another late
1970s/early 1980s private circulation DX every-couple-weekly: issues 1-70,
113-140, 172-239. One stuffed 3-inch binder. Plenty of great DX info. $50.

3. "RADIO NUEVO MUNDO" Treasure Trove: Issues 1-71 of the famous Japanese
LA DXing publication from the late 1970s into the early 1980s. Incredible
amount of info for the serious LA DXer. Also, includes two books, "LA
DXING", a photocopy of the first book and a bound copy of the second
edition, from 1982. Also, the special Fifth Anniversary edition of RNM.
And finally, to cap off this orgy of LA DXing paraphernalia, a few stray
copies of the Machu Pichu DX Club, published in Peru, and the Bolivia DX
Club boletin. $70.

4. "THE RADIO BOYS SEARCH FOR THE INCA'S TREASURE", here's one that you
never see, a hardcover "Hardy Boys" type of radio aficionado's novel for
kids, copyrighted 1922. Super condition. If you call yourself a diehard LA
Dxer, your shack isn't complete without this. $50.

5. SOUTH AMERICAN HANDBOOK: Very handy reference, and the historical
stuff, of course, doesn't age. Maps and geographic info make this classic a
must-have. Save twenty bucks and buy a used copy! 1983 - $8. 1976 - $6.

6. BROADCASTING STNS OF THE WORLD (FBIS), BOOKS I & II, 1974. Nice condition, 500 pgs of data from the US govt's listening posts. $10.

7. BEST OF LOUDENBOOMER: NASWA/FRENDX SWBC satire from the 60s & 70s. $6.

8. REVIEW OF INT'L BCSTG: 1983-84 Issues No. 75-87, $3.

9. PASSPORT TO WORLD BAND RADIO: 1988/90/91, $17.50 for lot of all 3 books.

10. VIRTUAL GRAB BAG OF RADIO REFERENCE BOOKS: Japan's "BCL" (date?); "DXing According to NASWA"; Radio Amateur's Handbook 1973; The ARRL Antenna Book. Take 'em all for only $12

11. POPULAR COMMUNICATIONS MAGAZINE: The First 18 issues!!!! Starts with the desirable Vol. 1, No. 1, in Sep. 82. Great reading and a lot of fun, too. Collectible. $35 for the entire lot, just under two bucks an issue. Great condition.

12. GRAB BAG OF RADIO STATION CASSETTE RECORDINGS: Here's a real assortment for the LA Dxer: 3 cassettes, two are recordings of Peruvian station IDs from the 70s and one is of Bolivian stations made by the Bolivian DX Club. Bonus: will toss in another 3, I don't know what they are, might even be old blank tapes, but could be better.. Based on just the first 3 alone, this is a real catch for Andes specialists. $20

13. DANISH SW CLUB INTL BULLETINS: 3/73 TO 7/80, three 3-inch binders chock full of info. Also, bulletins from the Finnish DX Club, 1967/68/71/72. Only $20 for all of it!

14. VINTAGE FRENDX!!!!!!! Saving the good stuff for the end, gang: A lonnnnnng run of the monthly publication of the North American Shortwave Association, FRENDX, from Jan 1971 through May 1984! That's 160 issues of nostalgia, news, radio information and feature articles, old names and faces, history of stations, etc. Virtually priceless! ..... but for you, the entire lot goes for $250, just a shade over a lousy buck-fifty an issue. You'll never buy such great reading, so cheaply, again ! (Bonus: a free year of SPEEDX, just for fun.)

15. ANDES FOLKLORICO MUSIC ALBUMS!!!!!!!! Here's a classic deal for the Latin DX specialists. Imported LP albums (get out your turntables!) from Ecuador, Peru and Bolivia, featuring that beautiful haunting music from the Andes. Finally, you can learn the different between a huayno and a passacalle! Special deal, assortments of 3 albums for $20, or 10 albums for $50. I have something like 50 albums to sell, so build up your collection now! Sorry, assortments will be as put together by me; no custom orders, please. I will try to make each lot as balanced a set as possible. Also, these are 20 years old and although look to be in tremendous condition, no guarantee that they will all play like new and some warping is probable on the discs.

IN ADDITION TO ALL PRICES ABOVE, BUYER PAYS SHIPPING/HANDLING.

Ralph W. Perry

Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.swap,alt.drugs.mushrooms,alt.drugs.usenet,rec.radio.amateur.homebrew

Been about 3 months so time for a wanted list again.....

1) Altec Bookshelf speaker. I post a lot looking for this
http://www.atl.org/images/altec.jpg
Not having much luck in a years looking so will be pretty
generous for one in good shape.

2) Funky looking home built microphones for less than $1 plus postage.
I'm probably the only guy in the world who would spend good $
for something that looks like the one sitting on the Vibroplex box
http://www.atl.org/images/bestHBmic.jpg
The Wollensak on the hand turned base is nifty but that pure junkbox
with the button glommed from a (pay?)phone takes the cake for
scratch built with character (so far)

3) Older National RX like FB-7 or other small pre-war RX with plug
in coils. Prefer something that is challenging and cheap. Perhaps
someone in their misguided youth disassembled and still has the box
of parts???? Your secret will be safe with me!

4) Homebrew tube type receivers that never worked or weren't completed
or have been abandoned for new and better things.

I'm told I have weird taste in radio debris so prior to tossing anything
out, send me some mail describing it. Who knows, I might swap something
you'd really like for something you were gonna toss. That Vibroplex
under the funky microphone above is sn 174276 and a Champion in it's
matching box. Box has been opened but is in pretty good shape. Key has
had minimal use. Might swap it for something...maybe a more unusual key
in poorer condition or ???

Thanks for reading.

-bob

Source record: 91134

Check the grid voltage on all tubes in the IF and AF when cold and when it distorts. I'll bet you have positive voltage leaking thru into the AGC line through a leaky cap or a gassy tube. You should NEVER see positive voltage on the grid of a tube in a receiver.

Second choice would be a leaky coupling cap in the AF section. Again, positive grid voltage will make the guilty part stand out like a sore thumb.

Good luck and 73 - John

>SB-220 upgrades ???

Dave, I would suggest you first read both design notes and comments made by Richard Measures. Richard has written many articles and is in my opinion, one of the most knowledgeable individuals on the subject. Richard's web site is: http://www.vcnet.com/measures/
Don't mis Richards comments specific to the Heathkit SB-220 where he reviews the process the Heathkit engineers took to make this a truly remarkly amplifier.

Hi Dave.
Have you tried contacting harbach himself??
www. harbach.com OR you can contact Rick Measures for his modes at
www.vcnet.com/measures/
In anycase you cant go wrong with either one but, I've used Rick Measures mods
and have had excellent results.
Good luck and 73's de Mike, K6STU

From: Michael Sawyer <kc4slk@csrlink.net>
Message-ID: <36A13963.CB0AE24F@csrlink.net>
Source record: 91148

To All,
Both rigs have been spoken for at the present time. Thank you all
for your interests in them.
73,
Mike
W3SLK

I have for sale two Johnson rigs that could be restored or as parts
rigs.
1)Viking I, has most of its tubes including 4D32 (I don't know
its efficiency). It does not have a cabinet.
2)Pacemaker. It seems complete however I do not know if it
works. Nothing is missing from it other than the screws that hold the
cabinet on.
Please note that these are being sold as parts rigs because when I
received them, I did not know their status. Also, I will not ship them.
Pick-up only. I am very flexible about driving to meet anybody who needs
them. In lieu of money, I would consider swapping towards an amplifier.
Thanks,
Mike
W3SLK

For sale: Drake (late 70s) desk mic (astatic) w/drake logo,
hi-low Z, plug installed on cord for tube drakes.
9+ looks, works great, new Shure controlled magnetic cartridge
installed (great, same as 444, no change in external appearance.)
very nice -- $45 shipped conus, or trade for below:

WTB Heath HP23B or PS 23 power supply, want one with vinyl
transformer leads, unless you can guarantee that cloth leads
are clean and flexible (in that case, any model) -- cover, finish
unimportant.

FS Drake AC-4 supply, NO TRANSFORMER, O/W near mint, $30 shipped
conus (or sell me a transformer!)

WTB also, Drake MS-4 speaker, exc or better, will accept lower
condition if cheap enough. (don't want to pay full price and
then repaint anyway!)

Amperite time delay tubes, 6N030, 4 ea, $30 shipped all.

thanks, Walt

What about Free Press ? This is a Free Country with a "Free Market Economy" . Our hobby is changing rapidly with the advances in technology. The old ways of doing things
are part of the nostalgia but unfortunately, I don't believe restricting Ebay listings is in the proper spirit of the "Free
economy" economic system in "our" democracy. A extremely easy way for one who wishes not to deal with the Ebay listings, is simply "DON'T READ THEM". You do have a choice
in this matter and remember having a "choice" is also another right we enjoy in this free country !!

Thank You,

-ERIC

>markets and this newsgroup. We don't try to commercialize our hobby or
>gouge our colleagues for the highest price. Do away with the Ebay postings
>or do away with the newsgroup.

there is no moderator for this newsgroup. you wouldn't believe how
horrendously complicated it is to accomplish things like that on
usenet. if you don't believe me, subscribe to news.groups for a
couple of weeks.

if other hams really feel the same way you do, ebay poses no threat to
your hobby.

if ebay DOES pose a threat to your hobby, well, then other hams must not
feel the same way you do.

but there is a way you, personally, can "get rid of" ebay postings.
a good newsreader could scan article headers FOR you and throw away
articles on topics that irritate you, so that you would never even
have to see them. Then you wouldn't even know that people were selling
their radios for outrageous prices on ebay, and you wouldn't have to be
angry about it.

as for making other people behave the way you want them to, well, I don't
give you great odds.

What about Free Press ? This is a Free Country with a "Free Market Economy"
. Our hobby is changing rapidly with the advances in technology. The old
ways of doing things
are part of the nostalgia but unfortunately, I don't believe restricting
Ebay listings is in the proper spirit of the "Free
economy" economic system in "our" democracy. A extremely easy way for one
who wishes not to deal with the Ebay listings, is simply "DON'T READ THEM".
You do have a choice
in this matter and remember having a "choice" is also another right we
enjoy in this free country !!

Thank You,

-ERIC

I have for sale two Johnson rigs that could be restored or as parts
rigs.
1)Viking I, has most of its tubes including 4D32 (I don't know
its efficiency). It does not have a cabinet.
2)Pacemaker. It seems complete however I do not know if it
works. Nothing is missing from it other than the screws that hold the
cabinet on.
Please note that these are being sold as parts rigs because when I
received them, I did not know their status. Also, I will not ship them.
Pick-up only. I am very flexible about driving to meet anybody who needs
them. In lieu of money, I would consider swapping towards an amplifier.
Thanks,
Mike

902. Help with Hallicrafters SX-111- distortion!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-16 00:00:00 UTC
From: ezela57383@aol.com
Message-ID: <19990116111703.00810.00002060@ng11.aol.com>
Source record: 91223

I would appreciate any advice on a problem I am having with my SX-111 receiver. After about one hour of operation, both AM and sideband signals develop noticeable distortion of the audio. Nothing terrible, but it is annoying. I am quite sure it is not in the audio amp section of the SX-111, the AF chain appears to be producing clean output. It appears to be perhaps in the IF or oscillator sections. Turn off the receiver and return a half hour or so later and the problem is gone....for another hour or so.

Has anyone experienced this distortion....could you advise what to focus on? With this distortion occuring after a period of time, could it be a gaseous condition of a tube in the IF chain or a leaky cap etc.?

Thanks for your help!

> I've forgotten. What is the frequency readout method on the 8640A? I guess
> I've always used the B.

It's something like the 8620C sweeper. The band switch controls a
revolving drum which brings different range scales into the visible
window on the front panel and the tuning knob moves a pointer by
string, like an old radio set, horizonally across the scale markings.

>to dry out. The biggest problem that I've found with BC348's,
>SP200 super-pro's and even the occasional 390-series receiver
>are problems with silver-mica capacitors that short out.

In over 40 years, I have only seen ONE silver mica capacitor that was bad. Many of the radios of the WWII era had molded paper capacitors in cases that resembled or were identical to mica capacitors. These are virtually all bad when you find them, as are many of the round molded paper capacitors (black beauties). If you find a "silver mica" that is bad, break the molded case open and see if it really is a silver mica. I will bet it is a paper capacitor.

A discussion on the Boatanchors Mailing List confirmed similar statistics with most other restorers.

Source record: 91027

FOR SALE:
National NCX-3 (for parts -or- restore).
--80, 40 20 Meter HF transceiver.
$75 (or reasonalbe offer) + SHIPPING

DESCRIPTION:
-No cosmetic modifications that I can notice.
-Some electrical modifications.
-Includes the RADIO and the external POWER SUPPLY.
-I do NOT have the microphone.
-I have the manual (yellowed from age? Not in perfect condition).
-The 2 FINAL tubes are missing.

I received this radio during Christmas. My intentions were to restore it and put it on the air. I replaced the tubes in the radio to get it to receive. It does receive on 40 and 80 but the S-Meter does not move and I am not sure that it receives fully. It is off frequency, however. The radio has been modified electrically. For example, I notice a 12 volt regulator on the VFO tube filament and the PTT relay.

This would make a good parts radio. Or for someone who wants to put a little time into it, it could be put on the air. I just don;t have time to fool with it, right now.

If you have any question, please contact me. I will try to answer them the best I can.

From: Don <don_h.@incom.net>
Message-ID: <36A2CDB6.F0AE3887@incom.net>
Source record: 91030

Hello all,

Has anyone out there used or have a Hammarlund HXL-1? I just picked one up. I figured most of it out but I'm not too familiar with tube amps. My question is, What is the pot in the lower center marked balance used for? How is it used? The amp seems to have around 800 watts out on 20 mtr into a cantenna. On 10-15 it appears to peak as high as 2kw and possibly more. All this with appx. 50 watts of drive. Is this correct or is my meter in the NYE MB-V-A incorrect?

Last,

What is this amp worth? Physically it's in very good condition.

Thanks for any help.

Don N6NLX.

Wanted, anyone who commutes / travels between UK and Germany
on something like a regular basis by car, van or lorry that can help with
transport / delivery of a couple of items of radio gear. I'm trying to save
the
buyer some money on shipping costs and risk of damage, there will of course
be a modest cash incentive. I don't have the address in Germany yet, were
still negotiating on the items. I'm in Somerset but could meet and pass on
the items and I'm sure the guy in Germany would travel to meet whoever
wherever.

Anybody GENUINELY interested in helping ?

simon.cox@breathe.co.uk

If you are not interested in auctioned radio equipment, just don't read the ads for anything marked eBay. your comment and mine just wasted more space.

>they are in preservation of BAs.

There are getting to be so many eBAY ads on here, we could almost change the
name of THIS newsgroup to:

rec.radio.amateur.boatanchors.for.auction.on.ebay

and then start ANOTHER newsgroup for folks who just want to BUY and SELL
boatanchor rigs outright!

Of course, we would have to think of a NAME for the new newsgroup...

How about something, like....er...

rec.radio.amateur.boatanchors
???

I'm not thrilled about the FA ads here either, put perhaps there is a workable solution to keep everyone happy. Many browsers allow you to filter out news messages with keywords in the subject line. On my Internet Explorer 5, you choose Tools, Message Rules, News and you can apply a filter to automatically discard any messages with "FA".

Message-ID: <36a1ea33.9622380@news.mnsinc.com>
Source record: 91081

I think this reflects what most of us have experienced at eBay:

1) You take the time to find the ads &register, and store your password and all
that.

2) You look at an ad and place what you think is a resonable bid.

3) It looks like you will get that shiny 75A-5 Collins for only $700

4) Then 3 Minutes before the end of the auction, several other guys all go
insane and bid so fast that the price climbs up in $1.00 increments to a
a final selling price of $3,152.49

5) You are BLOWN AWAY! You can't IMAGINE why you can't get in to make
a bid. (NOt realizing that some of these fat cats have T1 connections
onto the internet, which take priority over your humble AOL slow-speed account
connected via your old fashioned 28.8 kb modem, and you can't get in to try to
outbid them.

6) You realize in the end that some people have money to burn and that some
boatanchors are commanding INCREDIBLE prices these days on eBay!

Recent funny examples:

Drake TR-4C $532.50 (!)
Drake L-7 $960.00
PRC-41 $119.01
Racal GM 6790 rcvr $821.00
Sony CRF-320 $721.00
Collins 75A4 4:1 Spinner KNOB & Gear $266.00
Heath HG-10B $76.60
Icom 2-AT $191.00
Zenith Trans-Oceanic $173.48
1000 resistors $23.05
FT-101EE $380.00
HTX-212 $205.00
ARC-5 $26.00
Ranger II $315.00
NC-173 $152.50
RCI-2950 $255.50
HQ-200 $185.50
FRG-7 $224.50
TV-7/U tube tester $147.50
TS-530S $405.00
ICF-2010 $251.50

Some of these are above original retail selling prices!
I realize too that there ARE some bargains to be had.
You have to spend an ENORMOUS amount of time to find
them though.

If these are the kinds of prices you want to pay for things,
then eBay IS for you!!

If you are desperate and have money to burn, then eBay is probably a great
option for you! If you wish to give away your inheritance, then eBay is probably
a great option for you!

Have I bought on eBay - yes.
Have I sold on eBay - yes.

Have I bought on eBay lately - no.
Have I sold on eBay lately - no.

It is a waste of my time.

There are plenty of smaller auction sites where I have found some REAL bargains!
eBay is not among them!

I MUCH prefer this newsgroup, the OTHER auction sites,
hamfests, e-mail lists etc.

Anything but eBay! But as they say, "One man's meat is another man's poison."
I say, live and let live!

I realize too, that by perpetauting this thread we ALL are providing MASSIVE
amounts of free advertising for eBay and promoting the damned thing, he he!

922. ? Eddystone S640 Receiver Data ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-17 00:00:00 UTC
From: Martin Ackroyd <martin.ackroyd@virgin.net>
Message-ID: <36A1FE6D.7ABDC37F@virgin.net>
Source record: 91085
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Where to get a driver's manual and workshop manual?

Just got what I wanted for many years - a nice Eddystone
comms receiver.

Valves are mainly single-ended metal octals - 6AC7, 6SA7, etc
[though there is a top-capped 6K7 in there, plus a couple of
GT bottles].

It works - just. Clearly lacking in sensitivity, it probably
could do with a general check-up.

So the question is - where can I lay hands on the user's
instruction booklet and circuit diagram and alignment data for this
set?

[I have the Poole/Molloy book that covers Eddystone sets. The
640 is in there but the S640 is evidently quite a different
bird.]

Many thanks
Martin

Why don't you quit waisting your time trying to get Ebay off the Group.
Sometimes it is a good chance for an individual to get a line on some hard to
find item. Prices are competitive and the buyer determines the price.

>is "unacceptable" to them so I am not allowed to bid on stuff advertised
>there. Oh well, I will take my business (and my cash) elsewhere. That's
>arrogance, pure and simple.

Actually it's not arrogance. It's good business practice.

Ebay won't let people with hotmail addresses use ebay because they
have had lots of problems with scam artists which used hotmail as a
means of doing business. Since anyone can get a hotmail address at the
push of a button so to speak it is hard to verify ones identity.

Ebay will soon be offering a "Verified eBay User" system through
Equifax and they may then allow people with hotmail addresses that
have been checked thru Equifax to participate.

935. Re: BC-342-N RADIO RECEIVER

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-17 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <36A23344.7924@ix.netcom.com>
Source record: 91098

Personally, I prefer the BC342 over the BC348. The '342
is larger/heavier but I like the tuning mechanism.

Typically of radios of this age, expect to find silver-mica
caps that short if there is B+ across them, and other capacitors
to dry out. The biggest problem that I've found with BC348's,
SP200 super-pro's and even the occasional 390-series receiver
are problems with silver-mica capacitors that short out.

The legend goes that the silver in the silver-mica capacitors
will migrate if there is a high DC potential between the two
sides of the capacitor. This can be the case in some IF transformer
assemblies that have the silver mica caps inside them.

I took classes in radio communications at "Pacific Radio School"
in San Francisco back in the 1960's. One half of the school was
dedicated to license preperation for the marine radiotelegraph
license, and the other was for radio/television repair and
1st and 2nd class radio telephone operator's license.

The marine section of the school had some BC342's and also
several ex-Navy shipboard transmitters, TED, TCK, and some
others. The '342 was nice for copying CW with...

Ah.. anyone else remember Carl Potascz, one of the instructors
there ??

944. Boatanchor ID needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-17 00:00:00 UTC
From: ru486dx66@aol.com
Message-ID: <19990117150550.00914.00001839@ng17.aol.com>
Source record: 91107

Guy at work heard I got my ticket and said "hey, I have a radio-come to my house tonight and pick it up"

Not the type to pass up anything free, I stopped by his house after work, and helped him tote the radio out of his garage.

the radio is approximately 9.5" tall, 9.5" deep, and 13.5" wide. it has a black wrinkle finish case which is double walled in places and weighs around 5 lbs by itself. You could park a car on it.

The guts of the radio are encased in a cast aluminum fabrication, not unlike a tank. Sherman, that is.

There is nothing in the way of identification on the radio. There are several RCA (tubes? they're encased in aluminum so it's hard to tell) one of which can be accessed through a 2" square hole in the top.

The front has three toggle switches, Power, "mod/cw", and one unmarked one (transmit/recieve?) the unmarked toggle is in the place of what was originally the power connection(or so it's marked) and the power is currently going in the back. Next to the power cable is a 1/4" jack (key?) there is another jack on the front labeled phones.

There are three "bands". 1.5-3 mc, 3-6 mc, 6-12 mc. I assume the MC means Mhz. Which tells me this is a 160 meter to 30 meter radio?

There is a dial marked "AF gain", one marked "CW pitch", one marked "RF gain" There is also a selector switch marked "oscillator selector" and has choices of

MO, CO1, CO2, CO3, CO4. The antenna connector is on the front panel.

The entire rig has the look of origin a la Uncle Sam. Other than the lack of ID of any type, which is a big Uncle no-no. Weighs around 30 lbs. Has a couple of crude 1/4 turn type screws which need a degree in engineering and the dexterity of a bat to operate. (they hold the case to the guts)

The power supply is separate, has an octal plug which connects (through linen covered wires) to the rig.

Any idea what this is? It has the look of mass production, I mean it wasn' t homebuilt, and it seems (other than one broken solder connection) to be intact; do I dare try to plug it in? or for that matter use it for anything other than a counterbalance for a forklift?

Anyone who may know what this is, or could point me to someone who knows, please write me @ ru486dx66@aol.com or Robot1@juno.com

Thanks!

Mark

945. FS: Swan 400s etc.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-17 00:00:00 UTC
From: Bob Miller <bmiller@calweb.com>
Message-ID: <36A2468E.84266A3D@calweb.com>
Source record: 91108
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

A pair of Swan 400 Transceivers, one with the 420 VFO, the second with the 406 Mobile VFO and the Swan external VFO that covers the ham bands in 500 Khz segments (cant recall the model number). Also includes two AC/PS speaker units, two vox adaptors.

The units are in fairly good condition. No dents, major scratches, rust or crud. They are operational but should be aligned and may need some tubes to bring them back to original spec. Finals are fair to good--ok on the lower freqs, but getting flat on the upper bands (could be alingment of driver tube) One 400 setup has the horizontal stacking rail for the radio and VFO.

I want to sell this stuff as a single pile. I am not interested in selling off the accessories. I will toss in a Swan 500 parts unit (actually complete except for bottom cover) to the person will to take the equipment as posted.

$500 plus UPS versapacked from Zip 95827

Thank you for taking the time to read this post

Robin,
Many thanks. Spoke to Graeme, who gave me bags of info.

Seems my set is quite a hybrid that has been totally
rebuilt [to professional standard] by a previous owner.

Many thanks again.

Cheers,
Martin

I agree. The 342 is a better receiver. Its 455 KHz IF provides for
better selectivity than the 915 KHz IF of the 348.

On the other ahnd, the 348 is better built and more modern.

Regards,

EBay listings are easy to delete. When you come accross the first one as you are going down the list, just mouse click on subject, and the list will resort and bring them all up at once. Now - delete them all at once, and then mouse click back to whatever way you like to scan the list.

By the way - there are 53 Hallicrafters items listed on EBay at this point in time - including an SX88 for under $500.00 (no reserve - not mine).

You guys are free to run a moderated newsgroup if you want. A lot of
people would probably be grateful for you taking all the time
necessary to perform moderation duties (an hour of your time each day
should be enough to do all the work needed).

It's a lot simpler to just use a good newsreader with good filtering
capabilities.

Personally, the ebay ads don't bother me. If they did I would just
filter them.

Actually, as I recall, the charter of this group does permit items for
sale. However, it seems this group has degenerated into a group where
anything (boatanchor or not) is being offered for sale. Ebay ads don't
bother me (if it's boatanchor stuff) but all this other crap has made
this group rather useless.

Here here! I have a wad of cash burning a hole in my pocket to buy some old radio stuff. However, eBay has stuffily informed me that my e-mail service is "unacceptable" to them so I am not allowed to bid on stuff advertised there. Oh well, I will take my business (and my cash) elsewhere. That's arrogance, pure and simple.

Ok The big boomer has 3 big tubes 6lq6 and 1 kv6a and the freq range on it is 6 10 11 12 20 40 and one of the amps has just one more thing to fix cus when you key it up there is no output but if you trip the relay then you get full power so i think that it is just a small trans that has to be replaced..

the NC-303 work good just needs some small tuneing and the case is not to bad i wiuld say 6 on a 10..

the YAESU WTS work good that just need new batts cus i have tryed them and thay dont keep the charge for long so new batts would fix it..

The Geloso thay light up but i dont get any rc abd when i key up the trans the metor on the rig moves but i dont seam to get any out put this could be tubbs i dont no cus i dont work on tube rigs ok hope the helps out all that emal me did not wont to start to reply the same thing to all 30 + messages so that it for now.

later Brian

978. Re: SB-220 upgrades ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-17 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <36A1C8B4.FE2CCFE1@erols.com>
Source record: 91171
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have used virtually all the mods in both SB-220's and L4-B's. Harbach does a pretty good job except for the soft start modules. He uses a very cheap, very low amp capacity set of relays. I have had both of mine go bad. The solder literally flowed off the small pc board. His idea is fine, its just his selection of parts, in this case, was very poor. Were I to do it again, I'd use his board, but outboard some "real" relays, like PB, etc. His meters are very good, by the way. The only other comment I have is that when the soft-start boards went bad (one of them being used in an L4B), he refused to discuss the issue. I really don't know why. For this reason, I no longer will buy from him. That is not to say that others will not fair better.

Im upgrading licenses and Ive been listening to cw and
id like to be on line.

The only rig I have is the Swan 350 which I picked up at swap meet.

I tried connecting an old direct keyer to the rig , there is a
3/8 inch plug in the rear for the key and there is a switch in front
for transmitting cw. The tone is not like the cmos keyer Ive been practicing
with
and I cant hear the transmission .

Im looking for recommendations for being able to use this rig
for cw. Some one hear probly knows how to connect it up.

thanks

Jim Cook wrote:

987. Trade: Drake TR-3 /AC-3 /MS-3 for HW/SB-101

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-18 00:00:00 UTC
From: W4UDX <crslex@iglou.com>
Message-ID: <36A37940.1664@iglou.com>
Source record: 90980

For Trade: Drake TR-3 80-10M SSB transceiver with AC-3 supply, MS-3 speaker for Heathkit SB-101 or HW-100 or 101 with AC supply/speaker.

The TR-3 has an excellent front panel. It has a deluxe VFO spinner knob and a beveled calibrated VFO knob skirt. The meters and the VFO dial has new blue filters and white backgrounds purchased from Drake. The MS-3 speaker has a new full range 5x7 speaker in it. I have the original manuals and photocopies too. The cabinets will need repainted, but have no dents. The trransceiver has good finals. It works on 80 through 20 meters, but nothing on 15 and 10. I don't have the time to troubleshoot and repair.
Would like to trade for a Heathkit SB-100 or 101 or HW-100 or 101 that works right on all bands and doesn't need repair work. Cabinet scratches are O.K., as long as there are no dents. AC pwr supply and manuals must be with it. This radio is going to be for my 10 yr old son who is studying to get his novice license. Any help appreciated.
e-mail crslex@iglou.com or W4UDX@juno.com
Thanks......Mark W4UDX

992. Re: National NC-125 - Looking for info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-18 00:00:00 UTC
From: gpewitt@execpc.com
Message-ID: <77vvtb$j6r@newsops.execpc.com>
Source record: 90985

Gene, your National NC-125 was made from 1950 to 1955. It sold for
$149.50. It's a general coverage receiver with 4 bands...55 to 36
mhz. It has no filter. It does have a built in "Select-o-ject" Q
multiplier. Tube linup:
6SG7 RF amp
6SB7Y converter
2 6SG7 IF amps
6H6 det/avc/anl
6SL7 AF1/bfo
6V6 AF output
6SL:7 phase shift
6SL7 boost-rej
OA2 voltage regulator
5Y3 rect

It was a medium priced rig. The primo National rigs from that time
period were the HRO-50 and HRO-60 at $383.00 to $483.00.
Lot of money in 1950.
It will be a nice swl radio for you, enjoy.

Company is R&R Designs. Price is $39.95. Clocks are Telechron with
Hammarlund logo but do not have the timer warm up function. They also sell
replacement plasic for the original clock and Hammarlund grey paint. URL is
www.geocities.com/ResearchTriangle/Lab/4513/rr.html

Now, x... I have a bunch of stuff that is military and very light. The TCS transmitter
he sounds like he is describing is not that heavy by itself. Now the power supply -
originally a big chassis with dynamotors on it is the heavy part. :-) The BC-312
and 342 and 348 receivers even with power supplies are not much more than
30 pounds either. And Command sets are less than 10 pounds each.

Just because it says military, doesnt mean it is heavy. Except for the heavy stuff,
that is heehee.

The Mil List, info on them old heavy military radios that xray is talking about!

1011. PC scope question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-18 00:00:00 UTC
From: Bruce <bbrackin@bellsouth.net>
Message-ID: <36A29888.42EEA828@bellsouth.net>
Source record: 91038

Pardon me if this is a little off the general topic. Has anyone had
experience using an add-in board to utilize a PC as an o-scope. I have
a couple of boatanchor scopes (HP and Tek) and have thought about
"Upgrading". I, like lots of folks, have an older PC setting in the
closet and have wondered about using it with an O-scope board. Problem
is, most of the ones I see now would be cost prohibitive and/or
overkill. Is there a used market out there I should check? I mostly
tinker with older HF receivers and don't need anything to fancy. Anyone
had experience with one of these boards (good, bad or indifferent)?
Just curious.
Thanks - - - Bruce

hello all,

it seems this dead horse has been kicked through every radio affiliated news group i read.
i do not personally like ebay. i'm just not an auction fan i guess. but if someone wants to go there and pay over inflated prices for radio equip, be my guest!

the gentleman who suggested the filtering option was in my opinion correct. this is a "hear no evil, see no evil" kind of deal and you really are not bothered with the posts.

hopefully now we can move onto better things. hey, does anyone have a knight t-60 tx that they want to part with?

A friend of mine has his father's Hammarlund HQ-120X.
We wants to know what it's worth?
The HQ-120X was manufactured 1938-9.

I don't know what it's condition is.
I saw a post that said the HQ-120 (not the X [X=crystal filter]) goes for
$50-120 depending upon condition.

What has a HQ-120X gone for recently, or what might it go for, assuming
it hasn't been recapped ?

Message-ID: <19990118005029.21394.00002560@ng146.aol.com>
Source record: 91047

hello,

i have an early swan 350 (white face dial serial #c188106). problem is, witrh the radio on and the headphones unplugged, the sound coming from the speaker is like a hamster wheel squeaking with the white noise in the background. with the headphones plugged in, the sound goes away and is replaced with a humm. any ideas? could it be the speaker itself? i thought it may have been the audio amp in the rig but would the rig make the sound with the phones in or out?

also, the rig has 6hf5's that are going flat. has anyone swaped these for 6146's? would it benifit me too swap or just replace the exsisting tubes?

one more and i'm finished. the rig when tuned up is only giving me 50 watts. the meter reads 200 ma on full output. the manual says this should be 500 ma and 400 watts pep input. question is, where do i need to start to check this out?

make replys simple, do not have alot of technical experience yet.

tnx

1021. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <77ulov$sci@news.Hawaii.Edu>
Source record: 91048
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, WH6U, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Sounds a bit like a Collins TCS series. I had a TCS-10 transmitter for
many years. Wish I hadn't sold it (I was younger then).

Good luck with your find!

Barry's right about the caps. The confusion is understandable, as many of these rectangular molded paper capacitors bore the "Micamold" trade name.

I have the following Hallicrafters receivers for sale:

SX-71. All caps, resistors and tubes that required replacing, have been. Complete realignment done. Cabinet refinished (computer color matched). Everything original. Looks great and plays great. Asking $175.00 (US) OBO plus packing/shipping.

SX-101A MKIII (this one is 80-10m with calibration for 2 & 6M) that is near collector quality (scratch on side of cabinet can be easily air brushed) with original Hallicrafters box. Asking $350.00 (US) OBO plus packing/shipping.

I just acquired my first boatanchor, a National NC-125. I am an avid collector of antique radios, but know nothing about communications receivers. This one has eleven tubes, and weighs a ton, so I assume is was a fairly deluxe set in its day. If anyone has any info, as to year of manufacture, approximate value, and source of a schematic, I would really appreciate it.

The Swan 350 uses cathode keying if I remember correctly and has around 120Volts on the key line. You will need to use a keying relay between the CMOS keyer and the key line to the Swan. I'm not sure why you would want to run A2 on hf. The Swan doesn't have break-in keying.

I modified my 350 by disconnecting the speaker on the powersupply
and connecting a smaller 2 inch speaker inside the case -
this completely got rid of the noice level.
The speaker wiring goes thru the cable to the dc supply
just use an ohm meter to find out which wires go out to the
speaker.

you can find more info at http://www.arnewsline.org

But the big question is why would you want to run A2 on 40 meters.
And yes I do have a the credentials to operate an amatuer radio station just inactive for a few years. Well anyway the mic impedence on the Swan is high and the output from the keyer is probably low so you can figure it out from there.

Source record: 90927

One article comes to mind, though for once I can't remember which magazine. It sometime in the early seventies, which must have been after the rig went off the market. The author decided to use it in his car, after it sat around doing nothing for a while. But the drift was too much. His solution was to pull out the vfo, and replace it with a crystal oscillator, and a switch where the tuning knob use to be. He used CB crystals, so I guess the vfo operates in the 9MHz range. He found they were spaced close enough for his particular use.

I remember comments that the rig's vfo was not particularly stable, cut I can't think of any other articles about fixing it. This might just mean I missed them or have forgotten.

One of the Non Net connected OM's W2LPB, has asked me to find a Repair for or a Replecment for a Dentron MLA-2500 "Plate" Volt Meter, this unit was made by Beede and it indicates that it was 1 ml/a FS... I have no idea if they are still in operation ?. Is any ONE Rebuilding the movments or can a NOS or any form of working version to be had. He will pay a "fair" price for a working unit, so if you have one that is in the "bone yard" MLA-2500 please help him out.

I am trying to hook up a external for him but it's a pain

Anyone nuts enough to want something that heavy? A genuine for
real boatanchor. In a recent estate purchase I came up with a new cond
unissued 80 pound box marked "for use with SG-1 radar equipment" -----
"CRP-50ABX adapter for remote Plan Position Indicator". The SG-1 was
standard on most WW II ships as the search radar. $50 or most any close
offer and it's yours. Thanks, Craig
Comes with the paperwork and diagrams in original envelope, the
unit was built by Raytheon in 1943.

Hello Jim !! --

Hey, I recently found a pair of these HT-2A village radios, and
the guy that I purchased them from had promised me a maintenance
manual. I need it so that I can determine the crystal characteristics
so that I can order crystals for these units from ICM ..

Would you have any info since this person never came thru
with the technical info ??

I want to put these on 27.115 on 11 meters, and on 130.05 on the
civilian aircraft band..It would be really great if you might be able
to help me out..

>
> Thanks for your help!

I seriously dout that the distortion is in the IF chain. I would look at the detector or
audio amps first. Check the B+ rails and make sure that you have the correct
voltage there. Then check for a leaky coupling cap or a large value resistor
(>1 meg). Also check the dector tube on a tube checker. And another thing
that just came to mind, check the agc circuit. There are some large value
restors there and usually some caps that can go leaky. The more I think
about it there more it sounds like an agc pboblem. Possibly the agc volatage
to the RF and sometimes to one or two IF stages. Usually through 1 meg
or so resistors.

Hope this helps

Chris

1076. Improving Collins 51-S (*.gif file)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-19 00:00:00 UTC
From: la8ak@online.no
Message-ID: <36a3caef.22698446@news.online.no>
Source record: 90999

Hi

The receiver was designed with AGC timeconstants as compromise between the different modes, but this did not work satisfactorily for ssb.

Have now scanned to gif file AGC modifications showing to optimize the agc time constants to suit the different modes. With the modifications, it is then the best sounding receiver I have ever listened to on ssb. If you are interested to see the modifications, it is only 13kb as gif file available via email

Note: The modification was carried out 10 years ago, and a friend has later got the receiver, so I cannot guarantee that the circuit diagram shows exactly the latest modification.
AM and CW modes may still need some further experiments with time constant (series R+C), but it performed well on hambands as well as BC-stations with heavy fading, it is also possible to choose the original time constant for AM and CW.

Hi,

Does anyone remember reading any old magazine articles that addressed
the VFO DRIFT in the EICO 753?

I have the later model, with the solid state VFO, and otherwise tubes.

If anyone finds a magazine article or someold notes, I would REALLY appreciate
a copy!

I also need a 7360 and a couple of 7199 tubes. Can't pay audiophile
prices, but would like to get this old beauty back on the air for fun!

Please e-mail me if you can help at all!

Regards - Bry, AF4K

FS: Excellant SX-96. Works just fine. Only mod is Xtal Xalibrator (100 Khz) and a cap in the audio to alter tone. Listens very well and was listening to 10 M SSB Saturday on a 10' wire. Very clean case and all original outside. Some spare tubes scrounged from goodie box. Not sure of spare tube quality. Manual, no speaker.

Not enough room in new house. Too many computers- too many radios- not enough time.

Make offer!

Well, this is off-topic for this newsgroup. The Web page is interesting--and I've bookmarked it--but the Parasol replica doesn't seem to be as streamlined as one of the original versions. <GRIN>

Hello!

I have recently uploaded some pictures and technical data of the National HRO-500, Reception Set R-107 and RCA AR-88D receivers I am currently working on. The R-107 is perhaps the least known of all three: it is a british WW-II military HF receiver, of about 100 lbs. Mine needs desperately a replacement front panel and original knobs... Any help with this will be appreciated.

If you want to take a look, please, go to my WEB page:

http://www.geocities.com/SiliconValley/6992/

and then click in the corresponding link.

I would love to hear your opinion if you visit the page.

Hope you enjoy them!

Best regards from Spain.

1087. Re: National NC-125 - Looking for info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-19 00:00:00 UTC
From: mccrk@aol.com
Message-ID: <19990119005631.00361.00000763@ng-fw1.aol.com>
Source record: 91010

The NC-125 was a mid-priced receiver built by the National Co of Malden, Mass., in the mid-50s. It sold for $149.50, and I believe the speaker was an additional $11 or so. It is a very sensitive receiver for the price and it has one unique feature. It is the only receiver that has a built-in Select-O-Ject, National's patented CW filter. The SOJ can also be used to boost the bass on AM. Simply turn the tone switch to the extreme left position (boost? filter?), turn the SOJ left hand knob (freq?) all the way clockwise and the right hand knob almost to the point at which the receiver goes into oscillation. Then tune in an AM station broadcasting music and listen to the bass.

You ought to acquire a manual, as well so you will have a schematic and learn something about the way the receiver operates.

I had one of those back around 1952, and it was a wonderful receiver. I have one now, as well, and still enjoy it for shortwave listening.

I have a Globe Chief Deluxe in nice shape inside and out but the cabinet
and face has been repainted gray and lettering needs to be redone.
Inside it is super clean.
This one uses two 807s. I have the original manual and it works fine.
Someone can redo the lettering and have a fine rig. I use it for CW
daily. $70+shipping.

Hi,
I don't remember any specific articles, but I recall that there were lots of
them regarding the 753's 'problem' the early 70's. I would recommend 73 or CQ
Magazine, as they tended to have more information of this type than QST.

I'm glad that Tony spoke up about this...

Yes, we all know where eBay is....we all
know how to use their search feature to
find all the Hallicrafter, Heath, etc goodies
we would ever want.

We all (should) know the purpose and
mission of this Newsgroup.

I feel that supporting eBay sellers and
eBay itself (they get a commision on items
sold) is in conflict with this Newsgroup's
mission.
eBay sellers, please don't get in a tizzy over
what I'm saying here. If I want to find your
"strong-tested tubes", "rare FT-101ZD" or
"mint condition" garage-queens...I know
where to find them...eBay.com. I may even
do a search for a Beany Baby or two while
I'm there...so, don't worry!

However, eBay is nothing but clutter here.

Pat, WB9GKZ

More news, bypassing the suspect component proves that
it is the item at fault.
I have been given 2 equivalent numbers SL7689 and LM302
neither appears to be a current device so we now need a new
equivalent to those.
1820-0158 are original HP numbers, thanks for that.

I have a dozen or so of those 'ol Weller guns. and a couple
real neat smaller one, just called Weller Junior.
Any electronics place has the tips. I buy them locally.
Otherwise Mouser has them, and you can still get them from
Rat Shack, but through the order book.
By the way, the new Weller guns....WHAT JUNK!
They are a cheaper plastic (but might now survive a drop off the
workbench) and the tips are held in with a cheap set screw. One
slip while tightening it and the set screw head is shot.
The old guns are found at flea markets and garage sales for
a dollar or two.
....Dave

Hi,
I have an Icom IC-271A, two meter all mode transceiver in very good condition with manual and Original Box. I would like to trade this radio for an HF Receiver that is in very good cosmetic and operating condition. I do not want a project rig that needs alignment. I'll put a value of about $400 - $425 on this VHF radio, so the trade should be about equal. I'd be interested in an HQ-180, HQ-170AC, late model HRO with coils, SX-28A, SP-600, or similar. If your interested in a nice all mode that runs 1 to 25 watts, this is for you.
Thanks and 73,
Jack

Hi - has anyone heard of a Gonset VHF Amplifier Model #3063?

I think it is for 6 meters.

Does anyone know anything about this amplifier, or perhaps even have a manual or schematic they could copy for me?

Best regards - Bry, AF4K

>You aren't doing anything wrong Dick. There are just some jerks on this any the
>other ham groups who have too much time on their hands and whine about anything

You know, Lee, it REALLY doesn't helpto call people with whom you happen to
disagree over a petty issue such as this "JERKS!"

About all that does is demonstrate your level of maturity!

I happen to not feel very strongly about it one way or the other.
If you don't believe that - hide and watch me!

Ranting and raving, either way, is kind of silly.

It is possible for decent people to disagree over things that they
have thought out quite well.

Please don't descend to the level of name-calling.

By the way - did anyone hear about the FCC cracking down "LIVE"
on 3894 kHz recently?

Source record: 90963

Don,
The Balance pot that you asked about is used when the meter switch is in the linearit function. Key the unit down and balance the meter reading to zero. when talking, the meter will then deflect upward when the ampifier is running non-linear.

The power out you stated is not quite right. Use a good Bird 43 with a 1000H slug and a good wet or dry 1kw load. With about 80 to 100 watts drive, the HXL-1's pair of 572b's will do about 600 real watts out.

good luck with the unit. I have had mine for 18 years with the same tubes, have run it on RTTY at about 350 - 400 watts out without any problem.

I am in need of a dual gang variable capacitor, at 365 pf per section. This is not carrying any power, so one from an old broadcast band receiver would be fine. An air spaced unit with 1/4" shaft is what I'd really like. Also, if anyone has a couple of little inductors at 100microH, I need them as well. Can't see paying the $8 shipping for $1 worth of parts. Please e-mail to <ve6inm@telusplanet.net>. Thank you. 73 de VE6INM (Glenn)

Source record: 90967

Not sure this really qualifies as a boatanchor, but I do need the help.

My venerable Weller 8100-B soldering gun is about to consume its last soldering tip. You may remember those old bent wires made of copper-alloy and having a square cross-section that were gripped at the business end of the gun to apply heat to the desired connection.

Does anyone know where I can get some more??

I used to see them (and buy them) at the Rochester, NY, flea market but haven't seen any there for some years now.

Hope someone can steer me to a supplier. Thanks and 73

For many years I've been using common #10 or #12 solid copper wire bent in the appropriate shape. Doesn't last quite as long as the original tips, but the price is right :-) A couple weeks ago had need to unsolder several DIP IC sockets. I simply bent up a special tip so's to apply heat to both rows at the same time and then gently (but quickly) pried the entire socket from the circuit board. Being able to bend your own tips also works well when you need to solder in a restricted area.

> point me to a resource? Thanks.

Wanted to point out that IMHO, the first thing to check is grounding. Are the computer and the radio closely referenced to the same earth ground? (they should be) Are the cases of both pieces really grounded? Don't forget, when dealing with RF, the surface area of the ground conductor is quite important.

I have a fairly dense, fine strand braided wire coming into the computer room direct from the grounding electrode for the house electrical service along side the conduit. (touching it) The braid is attached to the cases of computer, radio, etc. This has reduced my noise interference problems greatly. Beware, however, of setting up ground loops.

I was in Rat Shack day before yesterday and saw some hanging from the
pegboard.

Now, for my question. I need to rewind the top end of the primary on a
8200, to replace the top layer which was struck by lightning. Don't ask,
it's a long story. Anyway, how many turns are there from the tap to the
end? If that isn't known, would one of you carefully measure the
resistance from tap to top end and e-mail me. This is from the 140 watt tap
to the 100 watt end, not to the common. Thanks.

Well, one more shot. The NC-125 was the successor to the NC-57 with the addition of the select-o-ject, and loss of tuning from 36 to 56 MHz. The original advertising photos for the -125 in the magazines showed a 5 band receiver, like the -57, but apparently it was too costly or insensitive to include the extended coverage. As I remember, the S-40 Hallicrafters was one of it's competitors and it covered up to 44 MHz--er Mcps. My purchased new NC-125 had a problem that I never solved. When turned on, it often came up in a low gain mode. Removing and replacing the mixer tube 'popped' it up to normal gain. I replaced the 6SB7Y mixer with a 6BA7, but the problem persisted. In reflection, it was probably a poor solder joint downstream in one of the IF cans, but what did a high school student know in 1952? BTW, I used it for a while as a mobile receiver, with a small vibrapack for power. Worked well.
Finally-Weighs a ton? Try an RCA AR-88. 99 pounds out of the cabinet. The 125 is a lightweight.

Yes, it can be difficult. But the ferrite clamp-ons will do little if anything at
those low frequencies. He could also make sure all cables, including the power cord, are shielded.

This will be old hat for many of you, but I received an email recently following up on my roller chain post that I subsequently inadvertently discarded. Hit 'n' now if you're likely to be irritated.

I got my R-1051G at Fair Radio Sales in Lima, Ohio (http://www2.wcoil.com/~fairadio/index.html). They also had a non-working R-1051B on the floor the day I visited. I don't know how often they get them.

Beyond that, the best pointer I can give you is to Nolan Lee's R-1051 page at http://www.acadiacom.net/nlee/r-1051_index.html.

on the roller chain: "Micropitch" seems to be a registered trademark of Diamond Chain Co. of Indianapolis. Calling the factory is on my to-do list.

Hi, I've got a TR-4C, MS-4C, AC-4C for sale. The radio is serial number 34886. The radio might be a 9 out of 10. I never cared for that numbering system much so I have pictures available on the radio and speaker/supply. There is a scratch on the right side of the MS-4.It works great and I use it all the time you can hear it on the air any time in the evenings or Saturday morning, (depending on your location). E-mail at swb1@flash.net for pictures. I'm asking $400.00.
Thanks

Hello, I've got a Drake test set. It's the only one I have ever seen. It's got RF & IF freq. generators on board built to test T-4X, TR-4, TR-6, TC-2, TC-6 and TR-44. This unit tests Ip and comes with a a power supply jumper cable. This is a super rare unit. I want $500.00 and you ship. Incase you have never seen one of these units, I've got pictures. Just E-mail at swb1@flash.net

Thanks
Steve KC5TFL

>point me to a resource? Thanks.

That can be a bear of a problem. Computer manufacturers must comply to FCC or CISPR emission standards, but both ignore radiated energy below 30 Mhz.

Most of the cases I've worked on, the most effective "fixes" were to locate the antenna as far away from the computer as possible, and to make sure the computer case was properly RF tight. This could involve scraping some paint and installing some "finger" stock to insure good seam integrity.

It's a long haul. Sometimes judiciously placed ferrites on cables leaving the computer will help. If you want to try this, send me some E-Mail with your address, and I'll send you some ferrite samples. (no charge)

By the way, part of my job is to get my companies products through the various agencies, so I am familiar with the hassles. I also have a Hallicrafters SX-117 that sits about 4 feet from a 486 computer. It was a long haul.

>point me to a resource? Thanks.

I have seen this problem with an old 386 that I have. It's an old desk PC with mouse, keyboard and monitor. I have had some success with using the MFJ ferrites on the cables coming out of the PC. The case itself needs to also be sheilded better to bring down the RFI further.

I also have a Toshiba "Portege 650CT" laptop that I don't use an external mouse, keyboard and monitor, and I have no problems with RFI.

I think the ARRL book on RFI has a section dealing with RFI and PCs. You might check that as a source of information too.

Computer might be very well shielded. Problem might be in the monitor itself. Simply unplug the monitor and see if the QRM goes away.

Also try using double or triple shielded coax with 100% braid and foil wrap plus a good earth ground.

One thing you might look into is that each xtal will work 2 or 3 bands each. Depends how you set the preselect. Say if you had a 20.1 xtal that is used to go to 9 mhz. xtal -11.1 = 9.0 mhz. You can also go xtal -11.1 + xtal = a new higher band. So 20.1-11.1=9+20.1=29.1 mhz. In many cases you can get a third band appx 185 khz below the xtal freq. But you need a hot xtal osc. So if you had a 10 mhz xtal you could maybe get a band appx 9.885 or so. And it will tune backwards. Most all drake type xtals will work in other models. I have both a r4 and a 2c and swap xtals between them. I have a boatload but unfortunatly not for sale. Drake has em cheap though if you buy the right model xtals. Price varies per model even though they will work in all. MK

A frequent problem with that rig is modulation transformer, you
me be able to find a substitute, check with ARRL tech support, they can
be very helpful.

Mike,

I think that you should specify that these are "input" values to the
final tubes. My FL2000B puts out 500 watts on CW and 600 watts PEP SSB.
According to Yaesu, these numbers are up to specifications.

Hi folks just thought I would let everyone know that I was at Murphys Surplus today and all the R-1051's have been pick apart not a working one in the bunch there must have been 20 or 30 of them. These are in my works just parts units and all the one I looked at were in bad shape and all of them had bad modules so beware. IF you need parts they have it for that radio but the modules are all bad and not working . He will make you a deal if you buy a bunch . The woner is a great guy. Now does anyone have the 2 main modules for this thing ? The RF module and the IF moules thanks Matt Parkinson OH I need them to be working .

At work, it's my monitor that causes the problems, both on a modern portable
and an old American 5 table radio. As it's a big 19 inch monitor and in my
smallish cube, it's not possible to do much but move the radio; the *energy
save* mode throws off so much RFI it completely wipes out reception of AM....

A followup on my post. The files have an .exe;type=i extension. To run the files, change the file name so the ;type=i is deleted, and then run. If you download all the documentation, the wdshare.exe is the actual program. However, I think the demo is also missing some of the symbols. I think there is only a capacitor, resistor, transistor and a couple of digital IC symbols. No inductor, FET, diode, pot, variable cap, etc. is visible on the buttons.. Will need to check further. They do have an uninstall program.

The wordvu32.exe program that came with the download may be useful. I think it is used to view Word files by those who don't have Office or Word. The program proceeded to try to download something from Microsoft, but I was missing some files in my Windows and the download stopped. I have Office so maybe I don't have the needed files. The original post was rec.antiques.radio+phono; just stumbled on it again.

Hello, as promised I'd come through with more complete,
original, good to excellent condition Antique electronic
and audio catalogs/sales brochures.
All are as represented, ALL SALES FINAL on literature.
Prices below are firm, and INCLUDE SHIPPING to anywhere
in the lower 48 U.S. states. Others by quote. Some of
these catalogs have stuff YOU ONLY CAN DREAM ABOUT...
Thanks, first come, first served ! You will enjoy these.....
Please send your orders via Email to : Tubelit@aol.com

Regards, Joe Pratt

THIS IS WHAT IS HERE RIGHT NOW:

ADR audio catalog, looks like earlt-mid 70's, 7 pages, 4.00

Audio warehouse catalog, Vol. 1 Issue 2, looks like early-mid
70's, 8 pages, 4.00

Allied's supplement #133 to 1953 cat.#131, 48 pgs.
of the good stuff, tiny fold in one corner, but nice! 25.00

Allied's "festival of values" supplement # 182, 1958
100% complete, good shape 48 pgs, 18.00

Allied's winter sale catalog # 263, 1966, 89 pages in excellent shape,
includes all the Knight kits and order form, 25.00

The "Audio Exchange's audio fair 1955 edition, comes with extra
fold-out equipment flyers,nice condition! 8 pages plus 3 flyers, 9.00

"The care and feeding of power tetrodes" original, mint condition,
Eitel McCollough's rare (these days) guide to running the big stuff!
printed in the 50's, well illustrated, 25 pages, 25.00

Federated purchaser's 1956 catalog supplement for "High fidelity
sound equipment",a fold-out single page type, nice condition,
have 2 identical in same condition, 8.00 ea.

Federated purchaser 1960 catalog , 303 pages in nice shape, but
page 1 has some writing, has small hole in the last 6 pages,
but still real nice.. 23.00

"Heathkits for 1955" catalog, nice shape except a couple small
stains on cover,100% complete! 47 pages, 25.00

Heathkit 1956 fall flyer, near mint cond, 7 pages and order form, 12.00

"Heathkits for 1957" catalog, excellent save for a little stain
on cover, 100% there, 55 pages, 25.00

"Heathkits for 1958", This is THE one! All the TX's are in here!
near mint cond, 57 pages, 25.00

Heathkit 1959 catalog, near mint, shows the W-5M kit for 59.75 ! 100%
complete,....28.00

Heathkit 1960 catalog, 100% there in NICE shape, 66 pages, 25.00

Heath catalog,July, 1961, very nice cond. w/order form, 39 pages, 20.00

Heath catalog, Fall/winter 1961/62, Small tear on cover,
and cover loose, but 99% there,just missing order form, 99 pages, 20.00

Heath catalog, #810-50, 106 pages, very nice, 25.00

"Give a Heathkit" for Christmas, catalog supplement 80/31, Oct. 1962,
100% there, but cover is loose and worn, but OK looking,47 pages,15.00

H.W. Sams co. 1984 Photofact anual index, 208 pages, very nice, 12.00

H.W. Sams co. 1985 Photofact anual index, 216 pages, very nice, 12.00

Hudson Hi-fidelity catalog, 1958, 62 pages, all the goodies!
great shape, 19.00

Key Electronics, Inc. 1963 audio discount cat# A-17, 20
pages, very nice shape and very interesting, 15.00

MusiCraft special flyer, icludes schematic for the 60 watt
6550 audio amp! Looks like 50's or early 60's, comes with
free extra, different copy, 10.00

The NEW YORK TIMES, Sunday, March 15, 1959 Hi-Fi- stereo
special section 10! RARE RARE RARE in fairly good shape,
but yellowed, of course. 15 full size newspaper
pages, has been folded since 1959, REAL COOL STUFF 15.00

Radio Shack "newspaper type" catalog, # 117, Jan/Feb 1962,
"Annual mid-winter sale",near mint except for one small, tiny
tear, 40 pgs., 20.00

Sound reproduction inc, E. Orange, N.J. catalog # 50, 1977,
16 pages, 5.00

Terminal Radio Corp's 1959 high-fidelity 'Audio Digest"
catalog, straight from "Radio Row"
on Cortlandt street in NYC, 90 pages CRAMMED
full of dreamy items, rare and in nice
shape, 25.00

Zalytron catalog # 161, lotsa audio goodies! Nice shape,
a couple of small tears, tube info inside, too! 91 pages, looks like
early to mid fifty's, 15.00

Thanks to all, I'll post more as I find 'em!

I am soon aquiring a Drake R4A receiver and would like to get crystals
for the 11-90 meter shortwave broadcast bands. These would be (in
MegaHertz):
36.7
32.5
30.0
28.5
26.6
26.1
24.6
22.7
20.5
18.2
17.0
15.8
15.0
14.3

These are the actual crystal freqs, not the receive freqs. Anyone
having crystals known to work in the Drake (ie: series resonant, the
right size to fit the Drake, etc.) in the above freqs that you wish to
sell please let me know.

1232. Swap IC-271A 2 meter all mode for BA HF Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-22 00:00:00 UTC
From: W6ABC <friday@ccnet.com>
Message-ID: <36A8C760.91B438C5@ccnet.com>
Source record: 90871

I have an all mode 2 meter Icom IC-271A that runs 1 to 25 watts in very good condition that I'd like to swap for a like condition HF Receiver. The value of the IC-271A is in the $400 range. I want a radio that will tune both AM and SSB signals such as the HQ-170AC or HQ-180. Would also want to swap for a SX-28A in good operating condition. I don't want a project radio. Would also consider Collins S-line. I need a "good" all round performer, am not looking to trade for receivers in the HQ-110 class, I already have a couple of those.
Thanks &
73,
Jack

From: Craig Smith <ip500@roanoke.infi.net>
Message-ID: <36A9F17C.3AD5@roanoke.infi.net>
Source record: 90729

Picked up a couple out of an estate:

Telephonics Corp,NY marked GTE-26003A as I recall, a Navy WW II era flame-proof key. Has a large Navy style knob, complete and good cond, some of the black crackle paint has flaked off. $45 OBO

Service Buzzer--Signal Corps US Army--model 1914,leather cased telegraph instrument with what looks like a small induction coil and vibrator as well as a neat small key, has inst in the lid, mfg by Stromberg-Carlson and dated 1918. Leather is dry and checked but basically intact, carry strap attached, even still has the little adj tool kit inside.$85 OBO

Both are fairly light so shipping costs should be minimal. Thanks,Craig

I picked these up in a flea market this morning, with some other tubes. I have 21 of 'em. They all test fine on my Mercury mutual conductance tester (I tossed 3 bad ones). They belonged to an old TV repairman. I can't guarantee they're perfect- they are pulls/used, but the ole Merc says they're not too bad (this is not the Cadillac of testers, but it's a good indicator). $60 plus shipping for all of them.

1264. FS: EF Johnson Power Divider

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-23 00:00:00 UTC
From: Pete Ferrand <pete@vermontel.net>
Message-ID: <78e0dlmut1@remarQ.com>
Source record: 90755

For Sale:

E.F. Johnson Power Divider, Catalog Number 250-34

This power divider was designed to go beween a ham transmitter-exciter of the 50-150 watt class and a grid-driven amplifier, typically a Johnson Valiant feeding a Viking Kilowatt. Nothing special about the Johnson equipment and I've used it with other gear, but would be neat to add to a Johnson installation. Rear panel of box has UHF fittings for in and out, plus a ground post. In good but not new condition, pix available. $45 + shipping if needed.

> Thanks, W5VPQ

Yup,

According to Penson's book, it was the model SA-2550 and was designed to
be installed at the center of an inverted V or a dipole. It could also be
used at the bottom of a quarter wave vertical. SWR meter was not
included. Manufactured from 1986-88 and sold for $150.

Hope this helps :-)

I've had similar experiences. However, it may be interesting to note that not all Priority Mail is handled by USPS. Although they deny it publicly, Postal employees have complained to me privately that the Govt. has "outsourced" mail hauling chores to as private industry company I had not heard of and they were about as reliable as taking the mailbags out back and setting them on fire. I didn't believe it until I saw a Time magazine article on it a few weeks later.

Imagine-- you can screw off all you want and the postal service gets the blame.

Apparently this is a long-term contract, so get used to lots more of this! Its getting to the point where I'm just going to drive my own mail to its destination. :-)

>about as reliable as taking the mailbags out back and setting them on fire. I
>didn't believe it until I saw a Time magazine article on it a few weeks later.

I happen to know a guy who drives for a USPS contract mail hauler, and I
encounter a fair number of these trucks along the interstates between
Nashville and Chicago.

The fellow I know personally moonlights as a Baptist preacher and is as
hard-working, honest, and intelligent a truck driver as I know. In general
these guys are pretty decent to share the highway with - certainly above
average for semi drivers.

>Imagine-- you can screw off all you want and the postal service gets the
>blame.

I haven't heard any stories of contract mail haulers showing up at work
with automatic weapons and blowing away their coworkers, nor any stories
of contract mail haulers hiding, burning, or otherwise destroying mail.
I've read wire service stories in recent years about employees of the
Postal Service doing all these things. The contract mail hauler I know
drives a regular schedule and sticks to it, whereas the postal service
employees I know personally are not nearly as industrious and can easily
be imagined maintaining an inventory of semifictional horror stories.

By and large, I'm well pleased with my mail service; I haven't had any
incidents lately with Uncle Sam's Mule anything like the next-day package
I sent FedEx a couple of years ago that took a week to get from
Indianapolis to Nashville. I don't believe for a second that the postal
employees I happen to know in a single slow-moving, poorly managed post
office in my home town are characteristic of the USPS in general.

But I'd find reports like yours a lot more credible if you had some documented
cases.

Source record: 90631
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a LIKE NEW URA-38 remote antenna made by Harris Co. for the US Navy. Covers 2-30 mhz continous. Uses a HUGE roller inductor and a 10kv 500pF vacuum variable as the tuning elements. Rated at 1kW average. Built like the USS New Jersey. Comes with the remote antenna controller. You will need to fabricate the interconnecting cable. I have a very good copy of the manual.

Would like to trade this for a real nice receiver like a 51J-4, 75A4, 75S3, etc.. or possibly for a nice HF amp.

Shipping okay via UPS.

1321. Re: WTB BC-349

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-24 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36AB174B.4E329211@ix.netcom.com>
Source record: 90680

The BC-348/BC-349 combination, known together
as the SCR-260, was never produced in quantity.
I know of no BC-349s that have survived.

The BC-348's major service was in sets SCR-287 and AN/ARC-8.

SCR-287 was the famous liason set for Army Air Corps
medium and heavy aircraft. It consisted of:
BC-348 receiver
BC-375 transmitter
PE-73 Dynamotor
Tx Tuning units
TU-26 200-500 KC
TU-5 1500-3000 KC
TU-6 3000-4500 KC
TU-7 4500-6200 KC
TU-8 6200-7700 KC
TU-9 7700-10000 KC
TU-10 10000-12500 KC
Tx LF Antenna Tuner BC-306
plus accessories.

(Note: If anyone knows of TU-1, TU-2 or TU-4,
I'd very much like to know about them.)

The AN/ARC-8 was introduced late-war and saw
service right into the late 60s in some aircraft:
Receiver BC-348
Transmitter ART-13
Dynamotor DY-17
LF TX Antenna tuning unit (various types).
plus accessories.

I have both these sets complete and really
enjoy tinkering with them.

Good Luck on your project!

1322. "FA" VS "EBAY" in the subject line.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-24 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36AB19F2.C4819BA7@ix.netcom.com>
Source record: 90681
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

This is an information post only.

"FA:," meaning "FOR AUCTION:," has become the accepted
standard for the subject line of auction posts.
This is because Ebay is not the only auction around.
If you are one of the people who does not wish to
see auction notices, please set your filters for
both "EBAY" and "FA:"
If you see someone post an auction notice without
"FA:" in the subject line, please inform them
in a courteous manner.

I'm only mentioning this because this subject has been
settled long ago. Please-- I don't want to start a thread
and won't get involved in any more Ebay wrangles,
nor reply to any response to this post.
The charter is the charter and there are people who
want to see these notices. As a courtesy to them,
Please use your filters.

Kind Regards,
Dave Stinson

Date: 1999-01-24 00:00:00 UTC
From: ezela57383@aol.com
Message-ID: <19990124091517.00769.00002689@ng61.aol.com>
Source record: 90683

Has someone out there experienced (or can advise on) a problem of lower output on 20 and 15 meters from a SBE-34 rig?

Input is rated at 135 watts PEP and I am getting about 50-55 watts out to a dummy load on 80 and 40. This is also slightly low. On 20 I am getting about 25-30 watts out. 15 meters about 15-20 w. I have verified the driver and PA tubes are OK. Outside of these 3 tubes, the rig is all transistorized.

Thanks in advance for your help.

Good morning Peter -- if no one comes forth with your request -- see
Manual Vendors at URL:
http://www.ac6v.com/pageaae.html

About $15.00 or so from several listed there.

Something is only worth what someone is willing to pay.
If someone wants to pay $635 for a HQ180...more power to them!
I bought mine for $125. Either the people bidding had no idea
what they were bidding on, or they had an extra 400 dollars
they didn't need!

Walt.

The 2B receiver is in good cosmetic cond. and works, but needs a good alignment.
It appears to have been re-painted but looks nice with no dents. Front panel is excellent. Includes the xtal calibrator, 2-AC.

The 2AQ is fair cond. No dents, but some rust on inside of cabinet. Could use a paint job. Front panel is excellent. This is a good fixer-upper Drake pair.

No manual, but copies are easy to come by.
$150.00 plus shipping from Okla.

1370. info on pc oscilloscope boards?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-24 00:00:00 UTC
From: Bruce Brackin <bbrackin@bellsouth.net>
Message-ID: <36AA5878.E9E68A64@bellsouth.net>
Source record: 90764

Try my question again - -

Pardon me if this is a little off the general topic. Has anyone had experience using an add-in board to utilize a PC as an o-scope. I have a couple of boatanchor scopes (HP and Tek) and have thought about "upgrading". I, like lots of folks, also have an older PC setting in the closet and have wondered about using it with an O-scope board. Problem is, most of the ones I see now would be cost prohibitive and/or overkill. Is there a used market out there I should check (any instruments new groups)? PC in question will handle win 3.0/3.1 ok but not win95.

I mostly tinker with older HF receivers and don't need anything to fancy. Anyone had experience with one of these boards (good, bad or indifferent)? Just curious.

Thanks - - - Bruce

HI Pete,

I'm interested. What does it drop the power down to ? I have a Johnson Thunderbolt that I am restoring and will be driving it with an HT-32B. Let me know if it still available. Do you have the manual or spec sheet for it ?

Hi Pat (and group) -

I must agree with you. It would be interesting to know how many folks who criticize you are "active" Boatanchor/eBay posters? I would tend to believe that most of them are.

Anyway, I have a special request to those of you who tell everyone on the Boatanchors list that you are selling something on eBay, to PLEASE PUT THE WORD "EBAY" SOMEWHERE IN THE SUBJECT LINE OF YOUR MESSAGE.

By doing this, my automatic Inbox Assistant will then be able to filter out every single eBay related post. Maybe if enough people do the same, these eBay posters will notice that no one is reading their messages.

From: hturn@flash.net
Message-ID: <36acf926.1059507@news.flash.net>
Source record: 90775

Hope all is going well for all. I have
for sale a CBS Audimax and Volumax for sale.

The Volumax is model 4000A.
The Audimax is model 4440A.

This would be a great addition for one running AM
on the bands. Both come with manuals and are in
working order. Cosmtically they are great each
is only 1 rack unit high. These were
state of the art audio processing at
broadcast stations.

I can provide more info if requested.

Asking $375.00 or best offer or even consider a trade.
I will pick up shipping in continental US. I will
not seperate as both were designed to work together as a
peak/level controller.

Let me know.

Thanks
Henry, KC5FLJ

>
>I am looking for specs on a Texas Instruments TI3000 HF transceiver.
>
>Can anyone provide a copy of the manual or at least tell me the
>operating frequency range, power output, etc.

As I recall (being a former TI employee), these covered from
2.1 through 22 MHz, and ran approximately 125 Watts output.
The PA used two MRF-421's driven by an MRF-406. I wish I had
some documentation to share with you, but I don't have any.
These radios were computer controlled and VERY complex, and
not at all reliable.

Dean / K5DH

In article <36abe1de.15461341@news.zianet.com>,
zepp9@hotmail.com wrote:

A Desk KW, as other posters have noted, is worth about 10 times what
you paid for it -- in today's market, assuming it's a clean specimen.

What it's worth today has nothing to do with what it's worth when you die,
as decent Desk KWs have been priced well above $1,000 for several years now,
except in distress sales and "I don't know what I have" estate sales.
As you well know.

If you just want money for it, list it on ebay(ack!ptui). As another poster
said, list a $4,000 reserve -- it seems that twice FMV is a safe reserve,
and you'll frequently hook a bigger sucker.

1395. TRADE: R-390A for Drake TR-7

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-25 00:00:00 UTC
From: tony@bright.net
Message-ID: <78ihrt$i65$1@cletus.bright.net>
Source record: 90590
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Greetings!

I am looking for a nice TR-7 to match up with my R-7A, and so am offering a trade. I have an Electronics Assistance Corp. R-390A from the FR-36-039-N-6-00189(E) contract, which I believe dates from 1967. The R-390A is complete with meters and covers, and is working, though electronically unrestored. The front panel looks very nice, and only the Megacycle Change knob shows any significant wear. Both of the rear panel rack-mount flanges are slightly bent, as though the set was in a rack that was just slightly too short; otherwise, the set is in fine shape.

I wish to swap for a TR-7 with PS-7 power supply, and I will include some cash to even-up the deal, depending upon condition and accessories of the TR-7. I am looking for a TR-7 in excellent working condition and very good to excellent cosmetic condition only. I can handle shipping of the R-390A (particularly now that the ice layer has melted from our roads!), and it will be packaged to ensure safe delivery. I would also be glad (actually, would prefer) to meet someone in NW Ohio or NE Indiana to trade in person.

Please reply via e-mail. Thanks for reading my post!

73,

Tony N8SNC

"We couldn't make up stuff like this if we tried."

Earlier this summer, down on Lake Isabella, located in the high desert, an hour east of Bakersfield,
a fellow new to boating was having a problem. No matter how hard he tried, he just couldn't get his
brand new 22-ft Bayliner to perform. It wouldn't get on a plane at all, and was very sluggish in
almost every maneuver, no matter how much power he supplied. After about an hour of trying to
make it go, he putted over to a nearby marina. Maybe they could tell him what was wrong.

A thorough topside check revealed everything was in perfect working order. The engine ran fine, the
outdrive went up and down, the prop was the correct size and pitch. So, one of the marina guys
jumped in the water to check underneath. He came up choking on water, he was laughing so hard.

Under the boat, still strapped securely in place, was the trailer.

Posting this for someone else. Please reply to:

JOHN_SEHRING.parti@ecunet.org

Not me. I'm just the message bearer :).
He's asking "best offer." He's new
at this so please take it easy on him.

For Sale: Battery Eliminator for 1920's battery-operated radios.

Measures 7.5"H x 5"W x 12"D, in a black crackle steel cabinet. Top and bottom covers are removable, friction fit (no screws). About 25 pounds weight.

Front panel says, "Kuprox A.C. Power Pack, Model 310, 115 VAC, 50-60 cycles, Manufactured by Kuprox Radio Corporation, Cincinnati, Ohio U.S.A."

Two controls, "Amplifier - increase--decrease" and "Detector - increase--
decrease" which drive small rheostats, they are 5-turn, knobs screw into/out of panel when turned unlike "modern" pots.

Binding posts are labelled: Power Amp 135 volts, C 10-, C 4-, DET+, B 67-1/2+, B 90+, B- NEG

Inside, three separate compartments separated by steel partitions.

Type 80 tube (not included) as rectifier, its socket is raised up & mounts
to a surface rather than through a hole.

Power transformer, I measured 25 ohms DC primary resistance, has original
power cord, 5' long, cloth covered (some frayed) and rubber insulation (cracked but no bare wire shows) and original AC plug. No, I haven't powered this up. I think it'll take extreme care to do so, very old electrolytic caps, fragile wiring, etc.

Third compartment has two, smaller (than power transformer), identical chokes. What appears to be an air-wound coil(?) (light in weight so it has
no iron core, 2 wires to it, coil all well wrapped in electrician's cloth
tape, measures 4"x2"x0.5". Also a porcelin power resistor about 25 watt

rating standoff-mounted on back of rheostats. One fairly large, steel cased, potted, multi-section capacitor, number of sections unknown, 7 wires
come from it through a grommet in the steel case.

Condition appears fair-good. Just a bit of rust on outside of case (was stored in near-desert conditions), lots of dust, tube socked partially
broken on one edge but appears functional as individual tube pin receptacles seem ok; condition of insulation is fragile but unbroken. Appears stock, no discernable mods.

Front panel is aluminum, dark brown with aluminum- and red-colored lettering. A few scratches & paint a bit off around rivets but quite good
condition. Three binding posts (these are pre-bannana type) are missing bakelite caps (each binding cap says "Burgess" on top). Two identical knobs (dark brown, with fluted, grooved skirt, has long line & arrow on top) appear to be stock and are consistent with 1920's styles.

Best offer + shipping takes it.

Hold on Pardners! The FT-243 was .093" dia. and 1/2 inch spacing. It
would plug in to alternate pins on an octal (remember those?) socket.

The 3/4" spacing, 0.156 dia. pin units were the DC34 and DC35 depending on
frequency range.

I have found a VFO. Thank you for your offers. Peter

1413. Hallicrafters SX-62A FS or Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-25 00:00:00 UTC
From: Bill <jobes@bellatlantic.net>
Message-ID: <36AD40B6.2871@bellatlantic.net>
Source record: 90608

I'm weighing (sic) the sale of my SX-62A. It has matching speaker and signal strength meter.
It works, but the ac cord and speaker wire are original and should be replaced.
Cosmetically, it's about a 7 on a 10 scale. (Higher if you love the radio)
I am the second owner, and bought it 20 years ago.
Offers cash or trade or combo via email.
Thanks,
Bill

1414. Re: Johnson Desk KW

From: Bill Wyatt <bwyatt@onenet.net>
Message-ID: <36AD49F2.3412E155@onenet.net>
Source record: 90609

Hi guys,

With all the excitement over the Desk KW, I though I would throw this out. I have a Johnson Invader 2000 that is in very good condition. I have done some work to it and it has been on the air and talked to several state side hams.

I replaces some of the caps in the power supply and a few of the paper jobs in the exciter. Did a cleanup and re-align on the exciter and had it working pretty good, got lots of compliments on the audio but, why not, it's got tubes.

For those that don't know what the 2000 is, basically it's a Desk KW with a Ranger built in for the exciter. I has a large power supply that sits on the floor so it's not for the faint hearted ham. Just interested in what it's worth, I have several dollars in it but, I got it a lot of years ago. Had dreams of putting it and my 390 together for a vintage station. With plans to sell the 390 I may sell this to. There is a fair chance it could show up at Dallas next summer for he hamfest.

BTW, I'm the guy that had the 390 listed for a while till it developed a problem. I think I have it repaired and it may show back up on the marked before long.

Thanks for you time and interest. This is a great group and I love the outcome of the "your are the dumbest" thread that was going. Could not have written a better script if I tried. Good going Mom.

Bill, N5WO

I have from 1936 through current QST's for sale (complete set), which I
am interested in selling. I don't want to split them up or sell
individual issues. Send me a note with an offer if you're interested in
them. I would be interested in trades as well if there was something
which interested me.

tnx, George

Hammarlund HQ-170 for sale. It is complete with a copy of the manual. One transformer has the leads soldered to the circuit. The base is bad form the shorted mica condeners in the base. The receiver has been cleaned, restored and aligned from the point after the bad transformer. Two fixed condeners will fix the problem and be better than the origional. It is complete and in good conition. I am asking $150 plus shipping. E-mail me directly at vincentelectronics@erols.com.

Mark

I have a TR4 complete but missing the 3 output tubes. Condition is
about a 7-10. Front panel is nice. Chassis is rusty and case can use a
spray. Was kept as a spare, as parts from Drake are now pretty well
gone.
$100 takes it. Either put back on the air or use it as parts for
your
rig. 73 Chris

Hi, my name is Don Davis, my call is WB3AXQ. The RT-618 was part of the
AN/URC-35 which was used by the USAF. It is a relative of the R-1051/
T-827 radios and is descended from the SC-901X(and very similar to it).
I hope this helps, BCNU, Don.

Eventually, those of you who continually find fault with eBAY will discover that we live (now) in a global village. Many of the bidders on eBAY are not american/canadian/western european, and for a lot of them, it is their only opportunity to purchase rigs that would otherwise be unobtainable. Don't like the prices? Don't bid. I have a friend in Pretoria who paid $175 (U.S.) for an s-38. Outrageous? Not at all, if you really want it, and $175 seems a pittance.

Hi Bill
Sure would like an SX62, but low on funds !
What are you looking for in the way of swaps.
I've got a bunch of gear here, and can send a list, unless you already have particular things in mind and are in a rush !
Best wishes !

Source record: 90536

Probably a little bit of both. Obviously yuppies. But hey, that's how the system works. That price will now probably be used as a benchmark-when other people contemplating listing *their* HQ180's hear about this, they'll demand the same price. Same thing happens in real estate (I'm a RE appraiser). I just did an appraisal on a piece of land this morning, it has a bidding war going on it. The two sides are going to keep bidding the price up, money be damned. Same thing also happens with, of all things, vintage Aloha shirts from Hawaii. 15 years ago, a nice old shirt would be worth maybe 15 bucks, now it's worth 10 times that.

> Peter
>
> Remove the big "X" in the e-mail address. You know the drill...
****

I designed that system for TI back in 78-79. It runs about
125 watts out and covers from about 2-25 Mhz, -- I forget
exactly. The frequency steps are 100 hz generated by a
three-loop low noise synthesizer and the first IF is 45 mhz
and the second is 5.625 mhz. It has a gas discharge display and
a squelch (that I was unhappy with). It used an oven oscillator
that drew mucho power but was VERY stable. I am using one of
them in a frequency counter I built 20 years ago.....

It consists of two packages --- the Rx/Ex package
which contains the receiver and a 100 mw exciter, and the
Ant/PA package which contains the PA and a microprocessor
controlled automatic antenna tuner. Interconnection is by
two coax cables. One of the cables is for Rx/Tx and the other
is for the serial data interconnect. If you do not have the
Ant/PA package, you can stilluse the receiver in the other
package, but you MUST set some jumpers inside. Otherwise, the
system will not be able to get a data word back from the
Ant/PA unit and will not activate.

You really need a manual. I do not know whether they are obtainable
or not, since the T I Marine Division has been out of business
for over 10 years.

You will not even be able to operate the front panel, or program
in receive channels, without one.

And it was so long ago that I can't remember the details of the
operation.... Sorry.

You have a real boat anchor. Unless you find a manual....

Good luck. If you want to trade it for something, I would be interested in it for souvenier value.

Message-ID: <36AE8A91.B6FD5914@NOSPAMuswest.net>
Source record: 90547

Hallicrafters S-53A
A true collectable, short wave listener radio.
8.5 out of 10 in appearance.
Five band:
540-1600 Khz
2.5-6.3 Mhz
6.3-16 Mhz
14-31 Mhz
48-54.5 Mhz
I have used this radio for a number of years but since I find myself
listening to my police scanners more and more this great
old radio is collecting dust and I am going to sell it (hopefully) to
someone that appreciates a great boatancher when they see one.
The only changes made to this unit, are a new power cord and a 1/4"
headphone jack mounted in one of the rear air slots. Also comes with
the original manual.
So if you are a collector, and would enjoy a working unit to add to your
collection, E-mail me with a fair offer, and if we can work out a deal,
we can then figure how to get it to you (it weighs 18 lbs), from
Denver.

Bob

Suspected as much as what? That there are criminals selling things on ebay? Of course there are, just as there are ciminals defrauding people on this newsgroup. Did you bother to read the article you reference? The issue is sellers possibly defrauding people, NOT eBay defrauding people. Your snide comment is irrational and has no supporting facts. In investigating eBay, the New York Dept. of Consumer Affairs is further demonstrating the principle that the only power the government possesses is to prosecute criminals, so it is in their interest that they make as many people and entities into criminals as possible. Before you cheer them for investigating eBay, you might want to consider that one of these days YOU may wind up as the target of such a witch hunt, with no rational or factual basis behind the investigation and possible prosecution. This is the great legacy of the Clinton presidency: that the innocent are made into criminals for what was formerly legal behavior, while the criminals sit in the White House and laugh.

By the way, if you read the article you would note that eBay stock went up 10 percent yesterday. Hardly "in trouble." I hope it goes to $600 a share.

I would like to sell the four Bird elements described below. All look new but are untested because I don't have a Bird Wattmeter. I will however guarantee them to be good or your $$ back. How's that for an offer??

#10D 200-500MHz @ 10w

#50D 200-500MHz @ 50w

#1000C 100-250MHz @ 1000w

#1000E 400-1000MHz @ 1000w

I would like to get $175 shipped OBO and will consider interesting trades.

Thanks in advance,
gary

I have the following Radio, and electronic equipment for sale. Will consider trades for Pentium computer EQ. All working last time tested unless noted. Shipping is extra.
Thanks

Tempo-1: Tube type Ham Transceive with Power Supply.Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

Lafayette: HB444/25A Looks and works great. This is an all tube 25 channel base unit with a nice chrome trim all around. would rate an 8 in looks. I think the mobil mounting bracket is also included, with nice heavy cast alum mic. $125

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

HW-32: 20 mtr single band xcvr,mbl mounting bracket, and HW-13A mbl power supply with connecting power cord. Will also work with the Heath AC power supply. looks good works well on AC power have not tried it mobil, $125

Non Tube Items:

MFJ-1224 computer interface: lets you use your IBM compatible or Commodore 64/128 computer as a full featured RTTY, ASCII,CW station for transmitting and receiving with your HF or VHF rig. Copies all RTTY shifts and speeds. Copies on both mark and space. Sharp 8 pole active filter for 170 Hz shift and CW. Built-in tuning indicator for all modes. Normal/Reverse switch eliminates retuning for inverted RTTY. Plugs between your rig and computer. 8 x 1ï¿½ x 6 inches. Use 12-15 VDC or 110VAC with MFJ-1312. Have interface cable and manual, but no software. $50

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Swan Phone patch: with hook up cords. This unit looks real good, but is also untested. As is$35.

MFJ Antenna Tuners: Have 2. One is 941B and the other is 941C. Both rated a 300 Watts. $40 each.

Siltronix Model 90 VFO: Excellent condition with three position crystal switch.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $200 for both.

Bearcat 250 Scanner: Have two. One working and one for parts. $75 for both.

Bearcat 210XL and 220 Scanner: One of each complete, but not working. $25 each.

Kenwood MC 50 Mic: Works OK and comes complete with cable and input jack. $50

Hello,

7768 General Electric NOS, NIB are in stock. This is a very special
valve with a transconductance of 50mA/V and u=225
I can find a few more data for you if you want it. This is a rather
expensive valve NOK 760.- each or about US$ 103.-

Best regards,

Arnold Goksoyr

More than 1800 different valves in stock. Plus: sockets,
transformers, caps, resistors and books about valves and
valve equipment. Many rare European valve types.
You will find it at my homepage: http://demostenes.vestdata.no

For those who may be wanting the hard to get 62S-1 transverter, this one is about the cleanest and best condition you will find. See: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=59893588

1506. Gonset G-50 parts rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-27 00:00:00 UTC
From: w6lac@webtv.net
Message-ID: <22661-36AFAF0B-109@newsd-154.iap.bryant.webtv.net>
Source record: 90494

In response to several inquiries regarding power transformets & major parts for the G-50, I have the following "parts Rig" which serves as a back-up for my mint cndx G-50 which is monitoring 50.4 as I type.

The cosmetic condition of the parts rig is a minus one on the usual 1-9 scale. All the knobs are there and the glass is unbroken.
Paint...well you can tell it used to be white.

When plugged in the pilots light, and after a while the tubes do too. It receives "ok", but an alignment would do wonders.

The transmitter loads to the same output power as the good rig, and the modulation meter swings in the normal range. The audio quality seems normal and I've had reasonable reports, though in comparison with the other rig, not as good.

OK, Now I'm confused. I thought that the FT-243 crystals had pins
spaced on 1/2 inch centers - ie. the ones that you can fit in an octal
tube socket. If the FT-243 refers to crystals with 3/4 inch pin
spacing, then what are the crystals with 1/2 inch pin spacing called?

Thanks,

G. McGregor

Date: 1999-01-27 00:00:00 UTC
From: ve6inm@telusplanet.net
Message-ID: <78n7hn$v77$1@nnrp1.dejanews.com>
Source record: 90567

David, Those things are real hard to find. An alternative is to remove the back legs of some gear and replace them with new feet of no particular diameter and use the removed ones as the front extensions. I managed to get some large feet from Electrosonic that are the same physical height and diameter as Kenwood originals, but slightly different style. They were manufactured by "Mode Electronics" and only cost about $0.50 each. Being on the back of the unit, you never even notice the difference. 73 de VE6INM (Glenn)

1537. Using 813 on 10 Meters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-27 00:00:00 UTC
From: avitko@harris.com
Message-ID: <78noja$f80$1@nnrp1.dejanews.com>
Source record: 90573

I was wondering if anyone has any experience using 813's on 10 meters?

I have built transmitters using 813's several years ago for 160m, 75m, and 40m and have had good luck using a variety of modes. However, someone once told me that an 813 does not really work very well up on 10.

The ratings seem to imply that it will operate full power up to 30 MHz, but the max. usuable frequency is only listed to be 60 MHz, which is only an octive above 10m.

Do they experience poor efficiency or insability problems on 10?

Thanks, Al

Hughes Kilowatt HF airborne power amplifier, with four 4CX250 family finals driven by a single tube. Originally built for the B-58 Hustler bomber. About 9" x 9" x 9" overall. Really cute servo tuning drive on the capacitors and bandswitching. Fantastic packaging job, appears to be complete, had to cost $100,000+ new... now only $150 !!!

plus shipping if necessary, naturally! :-)

Contact Marv, WC6W, 310 649 3111 (reasonable hours Pacific Time please) or via: Marv_E_Ads@Juno.com

Anyone have an opinion on the simple 2 knob antenna tuners offered by MJF? Want a low power tuner for random wire and "L" antennas.(200 watt capability more than sufficient) Can't seem to find much in the way of consistent data for building one on the bench.

Would actually prefer to make one but have not found values (inductance steps, # of turns of a given wire on a given coil form size, etc) anywhere for a tapped or variable inductor.

Any assistance would be greatly appreciated.

1545. Low audio in Viking II???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-28 00:00:00 UTC
From: Jim Mullen <jmullen@map.com>
Message-ID: <36affdf7@news.spamkiller.net>
Source record: 90431

Hey, anybody out there have any ideas about a sick Viking II. This one belongs to a friend of mine, was working fine, then the audio dropped way down. Tubes test OK (V1 & V2). I put an audio generator on the mic input, and traced through with a scope. Looks OK, seems to be adequate stage gain, but it takes much to much input power to drive the modulator to full output. Takes almost .1V from the audio gen to get the modulator to 150 mils or so. I would expect something a lot less would be required. Cathode bypass caps on the thee two audio stages have been replaced, coupling cap shows no problems. I lifted the cap (C7) across the interstage transformer and saw no difference in output.

DC voltages are all within reason, both LV and HV, resting mod current is correct. RF section works FB.

So, any ideas. How large a signal should I be seeing on the grids of the 807's? Scope seems to indicate I need about 4V PtoP to drive the fully. Can the interstage or mod transformer be bad? Seems like they should work or not, but I have little experience here.

Thanks for any ideas, please help my friend Mike play with his Johnson again!

1547. FS: Globe Matcher, Sr., AT-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-28 00:00:00 UTC
From: Pete Ferrand <pete@vermontel.net>
Message-ID: <78r0be$1qb$1@remarQ.com>
Source record: 90433

The Globe Matcher, Sr. AT-4 is one of only two medium power Z-match hf antenna matching devices ever available in the ham market (other was by Harvey-Wells). An interesting design because it provides a true balanced feed without need of a balun. Also interesting because it's very rare.

Styling matches the Globe Champion 300 and many other Globes of mid 50's to early 60's. Power handling is rated at transmitter input power of 600 watts CW or SSB PEP, 500 watts of AM. Covers 80-10 meters and matches 52-600 ohms supposedly but actually seems to match greater values. Output is to ceramic feedthroughs for balanced or unbalanced feed lines. Has a built in SWR bridge that can be set up for 52 or 72 ohm line. Straight through coax output also provided. Weight is 13 pounds and is 8" X 14" X 9" HWD.

Overall condition of the unit is good though not museum quality " has the appearance of being used but carefully. No obvious dings or scratches on front panel or meter, knobs are correct, some scratches on the top and sides of the advanced design perforated metal cabinet.

Original manual included.

Price $250 plus shipping as needed from Lebanon NH 03781.

Email to pete@vermontel.net or call 603.675.9165

I use the MFJ 16010 antenna tuner which is the one you are referring to (I think) and use it to match my coax feedline from my long wire to my receivers. It seems to work fairly well although the tuning doesn't seem to be very fussy and I usually don't have to retune at all unless I get up beyond about 12 Mhz.

Mark,

I've been using a second-hand tuner, a small 3-knob, 200 watt
MFJ-901B, connected to my Yaesu FT-1000 MP. It's about as small as
I've seen. I took the cover off and squeezed the connector rivets to
ensure a good ground. I turned off the the rig's built-in automatic
tuner and connected the external tuner, and found it does a good job
while running 100 watts. It's small, compact and has a balun inside.
I'm going back to the auto tuner and will save the external tuner for
homebrew projects. No problems - I'd buy it again.

I was wondering if anyone remembers the Rogers Electronics
Black Widow 6 meter mobile transciever. They where made
during the very early '60s, I beleave. The first ones
were xtal controled and had (I beleave a tuning eye) for
both recieve and transmiter tunning. The later ones
were vfo controled and had a meter for tuning.

I am not confusing this with the gonset "gueny bird" or g50.
This BA weas made on the west coast, but my grandfather,
k3hwz, was kind of an east coast distributor/repair
contact on the east coast.

These were really neat rigs for there time. Had 6146 final
and ran 50 wats input on AM.

Look on the web to see if anyone had any on their pages
but have not found anything. So I thought I would ask if
anyone remembers these things.

John:

If that is what a willing buyer is willing to pay a willing seller,
what business is it of yours? Marketplaces are for sellers as well as
buyers. Perhaps you should be pulling some old junk out of your
basement and selling it on eBay!!

Seriously, I look at eBay and am somewhat amazed at what some gear
goes for. There are some things about eBay that would encourage
higher prices, such as the feedback system and the ability to look at
a picture. Actually, I look at eBay in non radio areas, and where
sellers get too greedy by setting reserve prices too high, the result
is many auctions not meeting the reserve prices. Then you can move in
and try to make a realistic deal via E-Mail. Sellers are then often
willing to "get real".

Would the gentleman who wrote to me wanting to buy this linear amplifier please get back in touch. I lost your message.

Brian Carling
(apologies to the newsgroup)

On 22 Jan 99 at 6:21, Brian wrote:

Gonset 2m Linear amplifier Model 3063
Uses two 826 amplifier tubes. Has built-in AC power supply.
Looks great. No manual. Excellent condition - no scratches
or dents. Runs about 300 Watts p.e.p. Spare 826 tubes available
$200.00 plus shipping or best offer.

Please do not send me ANY SPAM!

Pursuant to 47USC227, any unsolicited commercial email sent after 72 hours from the time of this reply will be subject to the following fees: 1. Each message will be subject to a $500 (five hundred dollar) downloading and archiving fee. Terms are NET 10 days from date of downloading, 18% APR after 10 days. 2. Each message older than 30 days will be charge $1 (one dollar) per day for each kilobyte of disk space used until the downloading and archiving fee is paid. 3. Each message will be erased when all fees are paid.

1565. Re: EICO 753 VFO Drift & Tubes Needed

Using www.metacrawler.com I searched on 'hallicrafters sx-110' when I
came by mine. First page hit there said "$159.95" for this radio.
(http://ouvaxa.cats.ohiou.edu/~post/pix/sx110.html).
Kinda surprised me since I'd given only $60 for mine!

Nice radio too.

From: Bob Bethman <rbethman@erols.com>
Message-ID: <36B0EFC9.643BC932@erols.com>
Source record: 90527

If you want to run them on 10mtrs, you need to place a 50pf cap between pin 1 and pin 4 on one of the 813s. It stabilizes the amp for operation on 10mtrs.

Info from 16th edition of Bill Orr's 'The Radio Handbook', 1962.

Built a pair a few years back, it works.

I still have these two rack mount boatanchors. One piece is a RF Unit, the other is the Power supply, Modulation and transmitter unit. They are heavy and I would prefer pickup here in No. Utah. I have both front & rear covers for each unit and the connecting cable. It is a fixed frequency outfit but could probably be converted to VFO. Presently tuned to 135.54 Mhz. This was part of an estate sale and has not been fired up but it appears to be complete and in good cond.

My uncle, W8GBJ, had a home brew 10 Meter Xmter using the 813. I don't know if he ever had any real problems. I remember loading it up many years ago (over 30) and it worked well. It was a AM transmitter with plate modulation- sounded real good.

From: Terry Brown <browntl@concentric.net>
Message-ID: <36B27201.8BB8F0FC@concentric.net>
Source record: 90389

Anyone have a manual for a Hewlitt Packard HP410C VTVM? I just bought one without a manual. Probably needs calibration and maybe a part or two. I'd be happy to pay copy and mailing costs. Let me know if you do. Thanks and 73.
Terry (KA5IHV)

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

CCA very good. With manual. I just picked this rig up this week. The ONLY reason I am selling because I also picked up a 75A4 with matching speaker. I have decided to keep the A4. The 75S3B is around an 8 to 8.5.

Now I will be in pursuit of the matching xmtr for the 75A4.

I need $475.00 for the 75S3B. Serial number is 16xxx. 2.1 khz filter.

Buyer pays shipping from 92139.

I have since two years now the MFJ-16010 two knob tuner for random wire.
It's small, cheap and tunes almost everything.
I made athe same design (L tuner) using a roller inductor and a variable
capacitor, both motor driven, and it works very, very well.
The MFJ-16010 is very useful when camping because it can tune any wire
trown on the trees. I used it up to 150W without any problem.

That 159.95 may have been its original list price. Not too far off, though. If urs is in real nice cndx its probably worth that. Closet junkers would be in the 'less than $100' range. If you got a halfway decent one for $60 you did okay.

Source record: 90444

I have two brass bodied sounders that were made by Western Electric. One is marked "Sounder 3B 20 Ohms" the other "Sounder 3C 140 Ohms". I also have another brass sounder mounted on a finished wood base with brass feet and a partial brass key, it is short the paddle and sprang. The brass hardware that holds the pivots is complete and the brass locking switch arm is there. This key looks just like a ww2 item, I think they were J37's. The unit also has sturdy brass thumb screws for connecting to line. Will consider all offers.

The email for Brian is bry@mnsunc.com.
I mailed Brian a copy of the Schematics for the unit there are two different schematics. Make sure that you get both of these when you buy the unit.
I made the first offer on the unit for $100.00 before he decided to sell the unit but, I guess he accepted your offer after he decided to sell the unit.
Anyway I hope that this helps and have fun with the unit.

Hello all!
Our ARC on campus, WA2NPQ, has a Kenwood TS-820S in great shape -
except we can't get it to transmit! When trying to tune-up, we get proper
plate idling current, but when it comes to Drive tuning and Plate tuning,
we can't get an ALC reading on the meter. The manual says to turn the CAR
control up 'till an ALC reading is obtained, but that isn't working for
us. The rig has a new set of finals and I've gone through and checked for
loose solder joints/board connectors, but I can't find any openly-obvious
problem. We'd really like to get the rig working as we just put up a G5RV
on the tallest bldg. on campus (we're itching to get talking!) If anyone
can help us out (ie. previous 820S owners, other insightful persons,
etc.), please reply to this account.

Thanks and 73,

- Greg (gtmiller@buffalo.edu)

Summary:
Keywords:

Hello everyone,

I am selling a large quantity of interesting electronic parts and
equipment as well as working test equipment as a lot. Here is list of
just some of the things that are included:

Panoramic RF spectrum analyzer 10MHz-44GHz Model SPA-4a (c.1970). functional.
RF signal generator- lab quality 50-400 MHz w/FM modulator. works.
HP 400C decibel meter
Field Geiger counter
Old military aircraft receiver
military radio headsets
large air variable capacitors for old AM radios and transmitters
Original ScanVertiser LED moving sign display
Old 275 Watt 12VDC-117VAC inverter
B&K Precision television IF analyzer
HP laptop computer
6 big spools of antique radio hookup wire, assorted colors, good condition
new small 19" rack cabinet
new 19" rack faceplate
Giant sodium vapor lamp
Antenna mounting hardware
1939 Buick car radio and speaker/power inverter
Vintage miniature reel tape recorder
Computer grade electrolytic caps
Giant blade fuses
Vacuum tubes
HF marine radio, works
AM transmitter chassis
Large air inductors for old AM transmitters
Audio cables
Assorted semiconductors
VHS VCR
Old 3" CRT
Accordian (needs work)
Old meters and switches on a control panel
Touch tone decoder unit

And more rare and educational artifacts. Buyer must take entire lot.
LOT PRICE: $250 or best offer.

LOCATION: Davis, CA (between Sacramento and the San Francisco Bay)

Please call Mark at 530-753-4837 any time or else reply via e-mail to:

Lord knows, I hate to get in on this eBay topic. But I got to ask a question about this auction. Is the photo of the Viking II in your auction, an actual photo of the unit for sale, or are you using the photo of another Viking II to show what your Viking II looks like?

The reason I ask is that the photo in the auction looks like the same one on AADE's Hampedia. You can see it at the following URL:

http://www.aade.com/hampedia/johnson/johnson2.htm#viking2

If it is not the same Viking II, then you need to say that in your auction. If it is the same Viking II used in the photo, then you got a real nice one for sale and you should get a good bid on it.

That is indeed Rogers Viking II. The above website has images lifted
from several other websites, mine among them... in my case I'm quite
sure that nobody asked prior to "borrowing" them....

Very good, that does clear up the matter. I had started to bid on it until I noticed that I had seen the photo somewhere else before. When I did see the photo on hampedia I thought that someone here is using another person's photo. I'm glad that, that was the case and not the other way around.

Dunno anything about the MFJ tuner. Sounds interesting though. See the
following URL for instructions on how to make a tuner:

http://www.nordicdx.com/antenna/special/broom2.html

Hope it helps. Have fun!

Hi there,
NOS tubes I have for sale. These are all NOS tubes surplused from the Canadian military.

NOS GE 6550A power tubes,
NOS RCA 5963 twin triode tubes ,
NOS Amperex 5894 Tetrode tubes,
NOS Philips 0A4G gas triode,
NOS GE 6Z7G twin power triode,
NOS Sylvania 7Z4 full wave rectifier,

If you are interested please send me your best offers. If you are not then please accept my appologies

Thanks

A couple of things to check for:

1. The TS-820S has a 9-pin plug in the back for remote VFO. If you are not using the remote VFO, you need to insert the jumper plug that enables the internal VFO to the radio.

2. If you have a plug inserted into the CW key jack it will disable carrier generation unless the key is closed. This is a shorting jack, so unplugging the plug is like closing the key - either allows it to generate a CW carrier for tune-up purposes.

I had a electronic keyer that could not provide continuous key-down, so needed to modify it with a Push Button switch across the output so I could tune up the radio without reaching around behind and unplugging the CW key plug.

Mark OM,

Matching circuits for matching the transmission line to the rig are found everywhere in
the antenna books. See any ARRL Antenna Book. Have you looked?
I would not recommend purchasing any commercially-made "antenna tuner". Keep in
mind that these tuners, inside the box, are very simple devices. Make your own and
save your money for antennas. Incidentally, "antenna tuners" do not tune the antenna
at all. What they do is to transform the driven end of the transmission line to 50 ohms
to keep solid state transmitters happy. Tube rigs with pi-network outputs do not have this
limitation. If you are feeding the antenna with a coax line, you may still have high SWR
on the line using the matching network, which will increase line losses. But on the lower
HF bands, the difference is negligible, and you won't notice it unless the coax is very
small and/or a very long run length.
It is always a good idea to research the available printed informatioin before posting a
question to a newsgroup. Nothing takes the place of homework, HI.

73 and GL,
Don

Greg OM,

Does the rig receive OK? If so:
Since you have proper idle current, the final tube voltages are probably
OK
Make sure the jumpers are in the external VFO plug on the back.
Verify plate and screen voltages are present on the 12BY7A driver, and
that
you have plate current on the 12BY7A. Troubleshoot the XMIT RF drive to
the
12BY7A.
The TS820 and TS820S are excellent, rugged and REPAIRABLE rigs. I have
been
using mine for almost 20 years now (thousands of hours on the air on CW and
FSK), and I would not part with it. It also has FSK (which the
TS520/530/430/440/830
do not), and is an excellent rig for Pactor/Amtor. Lastly, this rig can
be converted to
the WARC bands too.

You'll get it working. Enjoy!

73,
Don, W6JL

I have been told that the interstage transformer in V-2's is a failure item. The one I have has had it replaced at least once. ER says that the original was under designed. Might pay to ohm it out, etc.

1633. Moderated disscussion group

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-29 00:00:00 UTC
From: CommQuart <commquart@erols.com>
Message-ID: <78t8af$m89$1@winter.news.rcn.net>
Source record: 90477

Folks, I am posting this here as information. The information
relates to ongoing problems with Ebay pointers and for-sale
ads on the RAR+P newsgroup. I am proposing the generation
of a new MODERATED discussion only group serving the needs
of vintage radio and phono enthusiasts. I have noted that eBay
has lead to some controversy on the Boatanchors group as well.

I am proposing a new newsgroup be formed for the discussion of
vintage radio technologies. I feel that many of the users of this
group could also benefit from a moderated discussion group. Your
input is welcomed, please post to rec.antique.radios+phono
with your comments under heading "Lets Just Do It"!

Note, I am not condemning or condoning the placement of commercial
or auction pointers in either usegroup. The RAR+P charter
prohibits commercial advertising, I am simply proposing a
POSSIBLE solution to the problem that would satisfy both sides
of the argument. No flames needed, constructive input is needed.

Peter

as posted to RAR+P

I would like to hear from folks interested in forming
a moderated discussion only newsgroup for vintage
radio, phonograph, and vintage communications
receivers.

The reasons are several fold:

1. It will be impossible to maintain RAR+P as a discussion
only usegroup considering the vast numbers of new folks
coming onto the internet everyday. Most don't bother reading
charters, and many believe it is their right to do whatever they
wish in a "free society". Continuing this debate is only leading
to a further splintering of the group, and making hard feelings
amongst fellow collectors. Folks, this is a losing battle. We will
continue to degenerate into meaningless and heated arguments;
and I don't see any viable means of saving this group as defined
in the charter. I am sad to say this.

2. The present charter is too narrow in scope, a new charter should
allow coverage of at least vintage television, consumer radios, boatanchor
receivers (communications), phonos, etc. The present "boatanchors"
forum has lost the Ebay battle and contains an ad to information
ratio of about 30 to 1. (Just where this group is heading!) I notice
many vintage radio enthusiasts have some interests in vintage communications

receivers, may as well bring them on board. Whether the group should
be opened to transmitters, etc. is open for discussion. We do share
a lot of common problems, and both groups are in desperate need
of a discussion only forum. The FAQs for the present newsgroup could serve
for the newsgroup with slight editing. Some folks have used the argument
that the "same questions" appear over and over, and that the ads break
the monotony. Expanding the scope of permissible vintage technology
discussions should make things more interesting. At present, someone
discussing an SX-28 or similar receiver is in violation of the RAR+P
charter,
since those topics are supposedly handled on the boatanchor newsgroup.

3. The new group MUST BE MODERATED. I for one would volunteer my
services. At least several moderators would be needed.
To be fair, absolutely no ads, wants, ebay pointers could be
allowed--the present RAR+P usegroup can serve that function for
those who wish to see ads and auction information. I don't like moderated
groups, it goes against my grain, HOWEVER, it is the only solution to
the problem at hand. As Bill noted, no matter how civil you are, you still
get branded as a cybercop or net gestapo whenever you mention violations
of usenet protocols or a newsgroups charter.

4. A moderated and controlled setting would hopefully allow us to recapture
some of the lost talent from both RAR+P and the boatanchors group.

5. Forming a second moderated discussion group would allow RAR+P
to carry ads. I see from the postings that many users honestly benefit from
the ads and eBay pointers. Some have correctly observed that times have
changed since the charter and original group were formed.

I am at a loss how newsgroups are chartered or formed, or how they exist
in cyberspace--obviously there must be an official list maintained to
provide
the vehicle for messages to travel between ISPs, and as a validation of the
newsgroup as being valid. Perhaps Mr. Schoo can offer his expertise in this
matter? I notice no fewer than 30 usegroups identified with autos; so I
would
adding a second vintage radio group would not be a problem.
I notice Erols.com lists several thousand groups, many of an arcane, sexual,
or other embarrassing waste of bandwidth and server storage.

Obviously, this is something I neither desire or would attempt to do on my
own.
But, if enough folks are interested, let's get together and go for it!
Generate some
discussions on RAR+P and build up the interest!

I hope I haven't offended anyone or stepped on too many toes by offering
these
suggestions. I have given it a lot of thought, and I honestly feel what I
propose would
serve the interests of both sides of this debate.

Regards

Peter

The MFJ 986 is a super tuner and you can go up to 3kw. It's a handsome
black box too, looks good in the shack.

Hello Marc,
Drake 2B is a triple conversion type receiver, it is basically 80 meter band receiver with crystal converter for all other ham bands. It has a pass band tuning at third IF of 55 KHZ, it has a product detector for SSB/CW and separate diode detector for AM. It is an excellent receiver. The copper plated chassis get corroded very easily. Couple of problem areas but can be easily fixed. I think for the money, it is one of the best sounding SSB receiver ever produced. Good luck to you.

Hello
I'M wondering what the rest of the hams out there think a reasonable price is for old pre-war (WWII)QSL CARDS. I was in an Antique Shop today and came accross 11 cards .. that a U.S. ham had sent to him back in 1937..the cards were from Germany, Austria , U.S.S.R , Belguim and various south american countries... the lady wanted $50.00 bucks for all of them..
At first she wanted $80.00 for all of them.. I did not get them.. but just wonder what the rest of the ham world would have paid for them.. All were on good condition...By the way I am not interested in buying them to re-sell I just want info on otheres about this..

For Sale:
(Add shipping costs to all prices unless stated)

100 Watt amplifier using push-pull 807 tubes - Bogen PA-100, was made
before Bogen made most of their cheaper amps. This one is built on a
neat-looking green chassis. Has a number of 6SN7 and 6SL7 pre-drivers,
5R4 & 5Y3 rectifier etc. Conservatively rated at 100 watts. Includes new
ruggedized 807 output tubes (5933) The amp is about 44 pounds
and measures 16" X 11.5" X 8" Shouldn't be too bad by UPS.
It will produce a LOT of audio. VERY conservatively rated at 100 watts!
Outputs for 100V, 70V and 500 ohms. Will sell for $85 plus shipping

Also, I can supply with it a nice big 125 Watt CVP Multimatch universal output
transformer that will drive any impedance from 1.5 to 16 ohms for an additional
$30 plus shipping. Will not sell until the amplifier is gone.

CES Model 510SA Smart Patch - with programmablke timers etc.
Complete and immediate control from your mobile or HT back to
your FM rig at the house or office. This is a really cool
gadget to connect your telephone to your radio and make phone
patches back through your home or office phone line. $50.00
plus $7 shipping CONUS.

MFJ 1270B TNC Packet Radio Terminal. With manual, in good condition
Some wear to decals on front panel, but otherwise looks and works fine
Will sell for $50.00 plus $5 shipping CONUS.

ICOM 2m FM transceiver - late model IC-228H with TT mic, manual,
mobile bracket, original box etc. Looks like new. Has some minor
problem. Seems to be stuck in transmit (which works!)
Hence, will sell for only $85.00

Kenwood VFO-520 remote VFO for the TS-520 series. In mint condition.
Will sell for $95.00

Try Hosfelt Electronics. Consider using a transformer with a dual
110 volt AC winding--one that is designed for parallel on 110, series
on 220 VAC. Use one primary winding as the primary, the other for
the secondary.

It may be that your receiver uses the automatic gain control line
to drive the "S-meter". It may also be that your receiver does NOT
use AGC when in the CW mode. You may have to change a wire
position on the mode switch so that the AGC line stays active
on CW. The next problem you may generate is that the AGC time
constant in your receiver may not be appropriate for CW operation
and may "thump" a lot ..

To all,

A Tube Collectors Club has been formed by some of the b-i-g
Collectors and Historians. "It's very well done." John Dilks, K2TQN

For more information and an application go to:

http://www.eht.com/oldradio/tubecollectors/index.html

FYI: A group of collector-historians has recently formed the "Tube
Collectors Association." This is in response to the need for a focused
group dedicated to the growing activity of collecting radio/wireless
tubes and to sharing historical insight about them. As a tube
enthusiast, you'll probably be interested in this development, and may
want to help guide the activities of the group from the start.

1667. WTT: Chrome Bencher BY2 for bug...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-30 00:00:00 UTC
From: Markus Thomerson <mdt@powr.net>
Message-ID: <01be4bee$a7842eb0$2dd7050c@mdt>
Source record: 90397

Hello and thanks for reading this post. I have a very nice chrome Bencher BY2 iambic key and clear plastic cover that I would like to trade for a Vibroplex bug (can add cash for the right bug). I do not care about the vintage or the type as long as it is clean, complete, and working. Thanks, markus.

1668. Lets not do it

I respectfully disagree, Joel.
In many ways, the "audience" is already split; the ongoing eBay "controversies" seen here so frequently are just one example. There are "boatanchor afficionados", who cherish various aspects of their hobby such as collecting, restoring, operating, and admiring "boatanchors"...and most often share same with others who have similar interests here. And there are others who feel "boatanchors" are to sell (and resell) for "fair market value" (whatever that may be)...yet others who feel "boatanchors" are to sell (and resell) for "as many dollars as possible". In no way do I wish to start (yet another) "debate", or "flames" as to whether any particular view is "right" or "wrong"...to each his/her own. I'm merely pointing out what I've observed over the years here, and certainly eBay has played a major role in the "going prices" of many "boatanchors".

Another reason I disagree has to do with what is currently going on in another of the "rec.radio" groups...the "rec.radio.shortwave" group, specifically. Spamming has disrupted the entire newsgroup, with the usual resultant "flames". The "fun" of reading such a newsgroup diminishes greatly, in my opinion, when such disruption occurs. Without any "controls", or moderation of such nonsense, many of the "regular" participants in the group cease to participate, and the group becomes an "uncontrolled child's playground".

If there were another way...other than "moderation", to maintain a useful, enjoyable, "peaceful" newsgroup...I'd certainly consider changing my opinion and support.

Hi Greg,

After all previous suggestions, fail you can try this.

USING A 50 OHM DUMMY LOAD at antenna connector.:

step 1 Turn carrier control fully clockwise.

step 2 Place meter switch fully ccw in alc position.

step 3 Place Mode switch in tune position

step 4 Tune the driver until meter deflects.

Please reply if this doesn't help.

We will just try something else.

This is a late 60s solid state radio. The quality and performance of this radio rivals the Sony CRF-320s built during the same era! See a picture of this rare radio in outstanding condition, and loaded with features, at Ebay item # 60464794.

This radio is quite heavy and very rugged. There are a ton of push buttons, levers and switches. It also has a giant built-in speaker for high fidelity sound. It has SW/AM/FM/MW bands. Reception on all bands are very sensitive.

Its getting close to my low reserve. Hurry, and you can pick up a very nice collectors item at a great price!

info?
> Any ideas what it might be worth?
>
> Jan Skirrow, VE7DJX
> Duncan, BC, Canada

I have one of these units, along with the manual. I thought I would post a description of this unit for those that are interested. Here's an excerpt from the manual:

Receiver Control C-975/URR is designed to provide automatic frequency control (afc)
of the audio frequencies used in a radioteletype system when the frequency shift is
850 cycles per second (cps). The equipment normally operates in conjunction with
two Radio Receivers R-390/URR or R-391/URR. Separate control channels within the
receiver control are used for the two receivers, but the power supply and metering
circuits are common. The receiver control corrects for both transmitter and
receiver drift and reduces retuning requirements.

The receiver control operates with an input frequency of 455 kilocycles (kc). The
455-kc intermediate-frequency (if.) signal from each receiver is applied to
separate input circuits. Each if. signal is mixed with the output of a beat-
frequency oscillator (bfo) and the resulting signal of 2,125 and 2,975 cps are
available at the output terminals. The afc circuits function to maintain the 2,125
cps mark signal on frequency, thus correcting for frequency drift in either the

transmitter or the receiver.

The receiver control is intended for use in a fixed station and not for mobile
operation. The equipment can only be used as part of a system, such as Radio
Receiving Set AN/FRR-33 or AN/FRR-39. These radio receiving sets are intended for
operation with Radioteletype Terminal Equipment AN/FGC-1.

End of excerpt from manual.

This unit weighs about 50 pounds and is slightly smaller (8.75 inches vs. 10.5 inches)
than the R390 receiver family. It has 35 tubes in it, with a tube complement of:

2D21W 2
3A4 1
6BH6 9
6BJ6 6
6C4 2
6J4 1
12AU7 7
26Z5W 2
5651 2
5654/6AK5W 2
6082 1
-
35

My unit was purchased from a person who claims they uncrated it from the original
packing material, and I believe it - The unit is in beautiful condition. Mine was
manufactured by Collins, on contract 26566-PH-52-51. The manual is dated 31 March
1954.

I do not know how much these are worth, but this is the only one I've ever seen and
is certainly immaculate. If anyone wants more information about this unit, let me
know. Hope this was informative!

Hello out there!

Anyone with a schematic for a AN/PRC-10?
Or just the connection of the batteryplug.?The set is operating with the
following voltages:
-6/1.5/87.5/135

Thanks.in advance!

LA1AL JOHN IVAR BJORKAAS

From: Joel Levine <joelbmh@worldnet.att.net>
Message-ID: <791o0l$t3n@bgtnsc01.worldnet.att.net>
Source record: 90281

I recently acquired an SP44 from this newsgroup. The physical condition of the unit is below what I expected and rather than haggle with the seller I have decided to offer it for sale at my cost.

The unit seems to work well but the case is scratched. A good view of the unit is available below.

http://home.att.net/~Joelbmh/SP45.jpg

For those of you not familiar with this unit, I will provide some information. This unit samples the IF and gives a visual picture on an oscilloscope of the signal activity above and below the actual frequency you are tuned to. As activity changes and as you tune through the band, the visual display changes as well. It will work with any brand receiver with an IF of 455 khz. This includes all the pre-war and most of the post war receivers. If you have any questions about whether it will work with a specific receiver, Email me. I am familiar with most boatanchors.

I paid $115 including boxing and shipping and will sell it for $115 plus the actual cost of UPS from 11740 to your location.

Regards

Joel WB2BMH

From: Joel Levine <joelbmh@worldnet.att.net>
Message-ID: <791odq$1bf@bgtnsc01.worldnet.att.net>
Source record: 90284

I have the matching VFO for the National NCX-5 transceiver. This unit is not working. It is missing the front feet and one knob is broken. The main tuning knob is good. The front panel and case are good and there is a nick in the chrome bezel. The price includes a copy of the manual.

Don't ask me whats wrong with it. If I took the time to trouble shoot it, I could just as easly repair it. This is a hard unit to find and the price is right. $50 plus packing and shipping from 11740.

Still looking for someone to align my Zenith TO T600 and check tubes. I asked Grady Richards but he is too busy and said it would take a while. Someone else sent me thier email address and phone number but unfortunately I deleted it. Hopefully they will contact me again with the information. I am picking up two 1L6 tubes for it tomorrow and would really like to get in in peak alignment. Any help would be appreciated. Thanks

Monty

> thanks - Lynn

The receiver was produced in Los Angeles for a couple of years--1935 and
36 according to Moore's tome on receivers. The 12 sold for $93, covers
.55-30 Mhz, has a crystal filter and features 12 tubes.

They are:

6B7 1st rf/meter amp, 6D6 second rf, 6C6 mixer, 6D6 high freq. osc., 2
6DCs in the if, 6B7 det/vac/first af, 42 BFO, pair of 42s in push-pull
for the audio amp and a 5Z3 rectifier. The meters read percent
modulation and field strength.

Hello List -

A fiend of mine has a bunch of coils from a BC-375 (a military version of the Hallicrafters HT-1).

If anyone is interested in bidding on these coils (not sure what bands they are for, but I believe he has 4 or 5 of them), contact:

Stan at bg783@scn.org

I am in need of an Aerotron MPAC-2 UHF mobile to make into a repeater.
Will trade a couple of VHF MPAC's or buy outright. Do not need
accessories. Please email with price and shipping. Thanks Don KB6GQA

1723. Tax deduction AND FOUR "FREE" Motorola radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-31 00:00:00 UTC
From: Steve Jackson <steve@homeautomator.com>
Message-ID: <792b20$l15$1@paperboy.baynetworks.com>
Source record: 90305
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Catches:

1. you pay shipping
2. you take all four radios
3. you make a cash donation to the club that owns these
4. you get a 501(c)3 tax letter for the donation

(please be as generous as you can be, we have no income source besides our $12/yr. membership dues, no hamfest, public-service club... we have over $175 invested in these radios which came out of members' pockets)

Radio #1: is a 110W MICOR set up for full-duplex repeater on six meters; was on the air on 53.45/52.45 but was removed because club standardized on GE MASTR II units. Has dual-diode drop power source, fan cooled, for PA so it can run continuous duty. Has Motorola famous Micor squelch; chip is socketed, includes PL decoder board and 1B tone reed. Silver teflon coax used internally; space for ARR GaAs FET preamp (not included). Cable for interface (9 pin Radio Shack Molex) & PA power, but no head. Originally a Model T71 series.
Elements have International Crystal rocks for the above repeater pair.

Radio #2: is a (MOCOM/70?) Consolette on VHF-hi band. All solid-state. I think it's the 30W PA (?). Clean shape, Motorola desk mic, manual. Complete with channel elements and etc. Not checked. Removed from rescue squad service; will retune to 2M ham band. Model number unknown. Currently on 151.775 MHz.

Radio #3: is a MICOR extended-chassis multi channel VHF rig. Removed from service, clean. No head. Model # T83RTA-3402AA. Case lock drilled out. Has three TX channel elements. RX side elements unknown. Hs RX PL board and 1B reed. TX PL board installed too, but tone unknown.

Radio #4: is a MICOR MX43RTA-1203A. Removed from service; no head, locked case. Unknown condition, frequency (frequencies), or accessories.

These rigs will be stripped for parts and discarded if they don't find new homes soon... XYL says get 'em OUT of here!!

I have just acquired a Amateur Transmitter that I think is Home Brew but is so well made I would love to get operational again. I hope someone out there is Boatanchor Land can help me out by sending me a copy of the article on it.
I will not take up space here for a picture of it but can provide one for anyone interested.
Anyway it is a tube rig that has 7 miniature tubes and two large tubes. It uses a 4-65A for the RF Transmit Tube and a 829 as a modulator. The final uses an Inductituner for impedance matching. The band switch has five positions and there is a VFO has three ranges 1.7, 3.5 and 7.0. I would guess it was made in the 40's or 50's. There are a couple of small tubes missing and I do not have any label's on the sockets. Does it sound familiar to anybody out there? Thanks Don KB6GQA

1733. HELP I.D. THIS HALLICRAFTERS SPEAKER??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-31 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <19990131180057.09541.00002905@ng-cg1.aol.com>
Source record: 90315

Hi folks,
This is a wooden console-type Hallicrafters speaker, 29" high, 22"wide, 16" deep. It has a 10" speaker cutout with the Hallicrafters logo in it and below that, a rectangular cutout 11"wide by 5" high. Inside it has a pm type speaker, no xfrmr in there. I have seen pictures of R12 speakers, this isn't one of them, but my SX28A fits very nicely on top of it. It is stained reddish brown, possibly an attempt to look like mahagony. It doesn't appear to have been stripped, so I don't think it was a different color previously.There is a terminal block on the back with 16 leads on it.
Does anybody have any idea what this is or what it goes to?
Thanks in advance for all of your help.
rgds,
nc183d

1734. Re: Price of old pre-war qsl cards ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-01-31 00:00:00 UTC
From: kargokult@aol.comnospam
Message-ID: <19990131182730.00905.00001909@ng-fd1.aol.com>
Source record: 90316

if you find radio cards at a postcard
collector's show, you'll see prices
generally $1-15 each. the dealers are
pricing mostly by the interesting image
and some by antiquity, which are what the
non-radio person would value the card
by, i.e. appearance. so the least valuable
are the data-only cards. dealers recognize
that "hardly anyone" except the rare radio
nut would be interested in data-only cards,
so they're usually happy to discount these
cards a good deal just to dump them. maybe
a fraction of a dollar to $1/ea. most desirable
from the dealer / paper collector viewpoint
are radio station cards with more generally
interesting scenes, such as studios, or
broadcast personalities or such, or cards
about radio listening showing families around
olde radios, etc. in the middle are ham
cards with images such as radio equipment,
cartoons, etc. these still don't have as much
appeal to the non radio person and even
most radio card collectors are looking for
broadcast station cards or radio listening
scenes, not "ham cards", so dealers are often
happy to dump these as well.
if you want the cards, and you think they are
a little outside what the ordinary civilian
eye would find attractive, and you don't
mind dickering, you could politely point out
to the seller that these don't seem to be the
ones that are most appealing to the world,
that they're likely to sit around for a LONG
time, and that if some reasonable price is
made, you would solve the problem by
taking them all. did you say 11 cards? if
they don't have wonderful images on
all of them, i would think $40 would be
about absolute tops for them, retail, and
maybe $25 - 30 more like it. most often,
tho, sellers really are unhappy about going
down to 1/2 asking price, or less, so these
may have to sit there for a while longer,
before the price is adjusted.

good luck.....
hue

Source record: 90320

Hi all,

Yesterday I bought a Hallicrafters S-58 in excellent shape at a swap meet. I was surprised nobody was interested in it, so I was able to get it real cheap at the end. I've never seen an AM-FM chassis in a large 1950s Hallicrafters hinged metal case. Are these more common than I think?

Also, the knobs on the S-58 are large, have smooth sides, and flush fronts. The Hallicrafters knobs I see on most radios have ridged sides and sunken fronts. Do these sound original for this model.

Thanks,
Steve

Are there any mods for the Collins 75-A4. I have one that is bone stock and I want to do a little improving without hacking it up. I would like to make the time constant for the AVC in the slow position a little slower. It looks to me like increasing the values of R92 and C112 would do this. Does anyone know? I would like to improve the frequency response of the audio circuit also. Looks like incresing the values of C93, C96, C100, and C101 might help. Any suggestions. I have already recapped the DC power supplies and solid stated the rectifiers with plug ins.
Thanks,
Jim W3ATV

----------snip----------

I think a fair price is .25 each, unless they are unique [photo and/or
well known radio pioneer] then more. Ebay has had some high prices for
ordinary cards. I think it will level off at a reasonable prices again.
$50. is crazy. (You probably acted excited when you saw them -- then
the price went up accordingly. You got'ta learn to play the game.)
Good luck.

Source record: 90362

Jim, there's a whole host of mods for the 75A4. One that I would NOT recommend is solid-stating the power supply because you face two bad choices. If you just stick in solid-state diodes for the 5Y3, you put stress on the filter caps and everything upstream due to increased B+ (today's line voltages are a little higher than in the 1950s, and of course you get less voltage drop across solid-state diodes than you do across a vacuum tube rectifier.

If you take this into account and add a dropping resistor in series with the center tap or in the B+ coming out of the diodes, you add heat because the resistor *will* run hot. And if the added resistor is under the chassis, the heat has almost nowhere to go, so you heat up nearby components.

Howard Mills, W3HM in Harper's Ferry, W. Va., may be one of the very best around at rehabilitating the A4 series. He's doing mine now, in fact. And he avoids solid-stating the power supply.

You might email him (w3hm@juno.com) to see if maybe he'll sell you a compendium of the mods he installs. He really does beautiful work.

Good luck!

Best, Avery W4OGK

1752. I Need A...115v to 115v transformer.

The resistor adds no more heat than the plate dissipation of the original rectifier tube did. The overall heat generation is less because the power used for the filaments is no longer used. If the heat from the original rectifier tube did no damage, placing the resistor in the same spot will do none either. The voltage drop in a rectifier tube generates heat exactly as does the forward drop in silicon diodes and a series resistor.

I am not sure what the rectifier is in a 75A4, perhaps a 5Y3. If so silicon diodes will save about 10 watts of heat generation and lighten the load on the power transformer slightly.

To be fair, absolutely no ads, wants, ebay pointers could be
allowed--the present RAR+P usegroup can serve that function for
those who wish to see ads and auction information

Hello Peter -

I am with you 100% I would rather have a group which focused on repairing
old Boatanchor equipment (both receivers and transmitters), and/or questions
about modifications of older gear.

The current "Boatanchors" list should remain just like it is, because the
majority of people seem to like it.

Let me know the new Newsgroup address, once you get it going.

CUL, Bill-N7MFB

PS Honest opinions that oppose your position are part of the process, and
should be expected. However, anyone who "shouts" at you probably won't
subscribe to your new list anyway.

1760. Breting 12

OK, John.. according to my TM11-4065, the following are the battery/power connections:

Pin A +1.5vdc
Pin B +1.5vdc
Pin J + 6vdc and -1.5vdc
Pin H -6vdc

Pin D +135vdc
Pin E +67.5vdc
Pin F -67.5vdc and -135 vdc

A word of explanation: Pins D-E-F are the B+ battery connections. In reality this consisted of 2ea. 67.5 volt batteries in series, the center connection being pin E.

Pins B-A-J-H are the filament pins, with Pin J being the tap between a 1.5vdc battery (-) and a (+) 6vdc battery. There is no 87.5 vdc tap as alluded to in your post. Hopefully that will do it for you.

The AC supply is pretty straightforward. When I had an AF-67, I built my own supply from a couple of TV transformers. One non-obvious thing about the AF-67. There is a bias battery for the modulator buried inside the transmitter which *probably* needs replacing by now. Enjoy :)

Ed,

No longer have the manuals, but that was considered the "Cadillac" of Mobile xmtrs, that and its older brother, the A54h.

Now the power supply, thats in demand as it will also heat up the AF68, same as 67 except six meters added. [...not hard at all to add 6 m to the AF67]

Both boxes are very straightforward, and you can work on them without a lot of technical expertise or a roadmap. The power supply especially should be no problem to check out, but if the big Xfrmr itself is gone, well problem there, maybe.

Take a stab at it, you may be very proud of yourself! In the "old" days I worked several continents on ten mobile with that rig powered by a PE 103 dynamotor.

Dachis says they were built in 1948, but quotes no production figures. The photo is pretty dark, but the knobs look as you described. Since they were only built for a year, they are probably relatively rare. But, since they are only AM/FM, the going price is in the $40-$60 range. Hope this helps :)

1781. FS HP8640b

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: Matt Parkinson <mattradi@earthlink.net>
Message-ID: <36B6966D.824A1CA@earthlink.net>
Source record: 90194

I have an HP8640b Generator OPT323
Working . Great Condition with Transit case
150.00 + shipping.

1782. C-375 Coils 4 Sale (more info)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: Bill Todd <bill@willapabay.org>
Message-ID: <lqxt2.492$1H2.877@news6.ispnews.com>
Source record: 90195

Complete coil set for BC-375 / HT-1 (Hallicrafters). There
are 17 B&W coils for grid and plate side of push-pull final.
All look unused and are in a compartmentalized wooden box. The
output coils are link coupled to the load for those that may
want to home brew a big AM rig. They sure look like they are
good for the legal limit. Weight with box about 25#.

If you are interested in making an offer on these items, please contact:
bg783@scn.org Stan, K7SY in Seattle

Stan is not on the Boatanchor List, so I am listing this info as a service
to him.

Thanks - Bill-N7MFB

1783. HC-6 Crystals for sale $2.00 each plus usps and Heath Crystal Filter....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: GARY <bierbier@ix.netcom.com>
Message-ID: <795df0$bjg@dfw-ixnews7.ix.netcom.com>

Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap

I was a little hasty on the original price since I did not sort the
crystals, hell it was hard enough reading the frequency off the things and I
have 20/20 vision. So I decided to change the price to $2.00 a piece plus
USPS. On the Heath Crystal Filter make me an offer and it is yours. I just
hate to throw these things away.

Source record: 90231

Lynn,

Real radio "men" (it was mostly men back then) didn't need labels. In the '30s, labels on ham radio sets were the exception. Sometimes a paper card with the controls marked on them came with the set. These were usually discarded in time.

If you tire of the radio, please contact me. I would like to get a Breting 12 for my museum [see below.]

Don,

This sounds like a great radio. I'm glad you're saving it!

My guess is it is a variation of a handbook design. You might
consider all the small tubes (rf) were the same? In the audio, if 11
pin, my guess is 12AX7 (audio in) 9 pin might be 6AQ5? If Octal then
6N7? You'll have to trace out the circuit -- and you have to do this
anyway. Make sure you count the pins in the propper direction.

1786. BA scope market?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: Bruce Brackin <bbrackin@bellsouth.net>
Message-ID: <36B5066A.B8D9DC77@bellsouth.net>
Source record: 90233

Have a couple of old boatanchor scopes that need a good home. Is there a market out there?

1. HP 170A (mil # OS-121B/USM-140) Dual channel
2. Tektronix Type 524AD.

Both work - with manuals - sorry no extra probes.

Picked up a "new" scope and would like to reclaim garage. Any suggestions?

It'll work. I have had one of those since 1978. Still works, and I use
it mainly these days as a mobile matcher. You would have more fun making
one though. And if you used a quality inductor , would have less losses.

Depends on what you are trying to match. If it's a wild mismatch you are dealing with, you might have to run less than 200w. I've had mine so hot one time that the plastic coating on the toroid inductor was bubbling. I can't remember what it was I was trying to match. But say if you were using one as a line flattener, which I used to do quite a bit on the icom, and the swr wasn't that high, you could probably exceed 200w. Just depends I guess. But for average use on most all antennas with a barefoot rig, no problems. Mine still works fine after 22 years of abuse. MK

Barry --
You can use one of the little solid state keyers to run a relay for the tube rigs. There are some circuits around for using a FET transistor to key the tube rigs, but it's easier just to use a relay. I have a TICK keyer which I'm using with a little 12-volt relay which is hooked up to the collector of the keying transistor of the keyer on one side and to 12 volts on the other with a diode across the relay to protect the transistor from back current from the relay coil. Any of the small solid state keyer makers will give you details on how to hook up a relay if you ask. The relays for this purpose I've used are little board-mounted ones .. you may need to try out a couple of different relays to find one that works best for your keying speed. Also, occasionally there are old Hallicrafters and other tube keyers on the market if you want an all-classic setup. Good Luck.

Boatanchor bundle located in my basement in Green Bay, Wisconsin. You must muscle these out to your truck or trailer:

Hallicrafter HT-32, Produces some RF output, cabinet painted brown, front panel OK.

Viking II, complete but untested.

Heath HW-16 Novice CW transceiver, complete, untested.

Heath DX-60B, Works good, smashed top rear corner on cabinet.

Hallicrafter HT-37, complete, untested, cabinet paint rough.

Folks, these are all "fixer uppers", not "mint" or "collector quality" (maybe garbage collector!). Price: $350. Items will not be "held" for your later arrival...
cash and carry, first come/first served. If you are a restoration nut...these are
for you!

Nobody said that rod has to be straight. Get the core out of a flyback
transformer from a big ol' TV set.

1809. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <794fr9$dcf@news.Hawaii.Edu>
Source record: 90256
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, WH6U

1812. WTB:"Signal Slicer"

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: simserv@inmind.COM
Message-ID: <3.0.32.19990201105134.006acec8@pop.inmind.com>
Source record: 90259

Am looking for a side-band "signal slicer" to use with my HQ-200; need it to separate SSB signals better. I have a circuit description which describes one as "using the phasing principle of detection and post-detection combination to discriminate between sidebands of a received signal. The principle is very similar to that of the phasing type single-sideband exciter. This circuit is based on a design of Norgarrd (W2KUJ) modified by W9DYV."

Maybe someone has built or bought this type of device and it is just laying around? Ideas on this topic please reply to Phil Bartells <simserv@inmind.com> 73s

I was surfing eBay Radio Equipment postings today when all of a sudden
I could not open any of the items to look at them, although I could go
page to page on the listings. I got frustrated and went to eBay's homepage
to find an eMail address to complain.

I could not find an appropriate eMail address except for one...their job
applicant
eMail address. I wrote to this address excusing myself for writing their
hiring
department with a shopping complaint. I stated my concern and signed my name.

Two hours later, I got a response from eBay on my complaint. It was a note
from eBay, Inc., "Your Personal Trading Community"...thanking me for sending
my resume. I was told that it was being reviewed and will be kept on file for
one year (due to their rapid growth).

As Paul Harvey would say....AAAhhhhemmmmm!

Hello,

7768 General Electric NOS, NIB are in stock. This is a very special
valve with a transconductance of 50mA/V and u=225
I can find a few more data for you if you want it. This is a rather
expensive valve NOK 760.- each or about US$ 103.-

Best regards,

Arnold Goksoyr

Pat,

There is a prominent "Help" button on most (all?) pages. If
you'd clicked on that you would have found:

1. Their live on-line bulletin-board style help.
2. Their support e-mail address.

73,

Casey, KS7J

Pat,

First, eBay does system maintenance on it's servers every Monday morning from around 1:00 AM to about 4:00 AM PST. Sometimes this goes well and sometime not. I have seen problems go as far a 7:00 PST. In the old days when eBay first came out this was done on Sunday morning, but I think everyone done there got tired of dragging in to the office on Sunday morning when something went wrong.

Second, eBay uses many servers linked together. This is why you can sometime get a listing of auctions but can't get into any of them. The server displaying the listings is up, but the server with the auctions in that category is down. This is often the case on Monday mornings.

As to you tring to email eBay about it, well, you can bet that someone down there is pulling their hair out tring to get it back up. I'm not 100% sure, but I would bet that if a server went out they would know about it in minutes.

Don't get me wrong with all this network talk about eBay. I buy and sometimes sell items on eBay, but nothing is much fun trucking off to a hamfest to buy a truck load of boatanchors!

Hope that helps,

Allen Cutts

1823. CW on the marine bands ends?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: cccacutts@mindspring.com
Message-ID: <794vaoppi2@camel25.mindspring.com>
Source record: 90270

Folks,

I heard today that CW (ie morse code) is no longer required for US ships over 300 tons starting today. I heard that instead of using CW for emergencies they are now required to us a type of satellite technology. CNN has a story called "End of Road for Morse Code's Dots and Dashes" at the following URL:

http://customnews.cnn.com/cnews/pna.show_story?p_art_id=3391787&p_section_name=Sci-Tech

Anyone else hear any more about this?

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

In the good old days one could
find small differential trimmer caps.
Simply a matter of adding two fixed
caps, a NPO ceramic to one leg, a
Negative coefficient ceramic
cap on the other. The differential allowed
drift compensation without affecting the
oscillator frequency.

1831. Space Transmitter Magnetron

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: Mike Shapiro <mikeshap@teleport.com>
Message-ID: <36B64DED.A325E32E@teleport.com>
Source record: 90278

I have a General Electric Z-5428-1 Voltage Tunable Magnetron that was originally designed for a space data transmitter in 1958. It operates in the 1700-2300 MHZ band.

I am retired and want to sell it, as a collectible. What would it be worth?

Thank you for your help and I hope to hear soon.

Mike

1832. Drake T4X problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-01 00:00:00 UTC
From: "D. Shane" <dshane@ichange.net>
Message-ID: <36B6632F.4B46@ichange.net>
Source record: 90279

Recently restored a T4X to service, after it sat on my bench for ~15 years. When last used, operation was flawless. Now have a problem with transmit power. Loads up normally from a cold start (into a dummy load). After warm up (and a contact or two), I get intermittent transmit power, and plate current while retuning for another band. While tuning, plate current seems low, doesn't advance with increase in gain control. I thought originally that I had a sticky meter movement, and rapping on the case sometimes affects the reading, but last weekend, when it happened again, I noticed that my wattmeter indicates that the power is varying along with the indicated plate current. This leads me to believe that the meter is OK, that the plate current is really varying. Does anyone have any experience with this problem? It seems to me that, since vibration on the case affects plate current, that perhaps I have dirty switch/pot contacts. I have been searching DejaNews and the web for help, but haven't had any luck so far. Anyone know what my problem is? I don't want to re-invent the wheel, unless I have to. TIA!

Don, K4DLS (k4dls@qsl.net)

1834. FS 70 cm Lo-Pass Filters (QRO)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-02 00:00:00 UTC
From: jstrohm@texas.net
Message-ID: <797k2alcg1@nnrp1.dejanews.com>
Source record: 90131

FS: 70 cm Lo-Pass filters
cutoff ~500 MHz, 60+ db attenuation in stop band
Frequency sweep printout available

Multi-KW power rating.

Constructed as line section in 3 1/8" broadcast hardline --
adapters available commercially or in surplus, or could be fabricated
(no, I don't have any).

Shipping from 78613 (Austin TX area), approx. 15 lbs.

$100/offer + ship, COD OK, will swap for interesting equivalent value.

I'll have photos available online in about a week.

I am looking for replacements for some old diodes. The part
numbers are 1N191, 1N458, and another that is marked only as a 500ma
silicon. Can anyone help me to find a suitable replacement for these,
and let me know the source of the data?

Thanks!

I have for sale a cherry Hallicrafters SX-130
general coverage receiver. I just used it last
night to WWV my wristwatch so I know it works,
and it also picks up C.B. pretty good, which is
unusual for a tube receiver. All tubes have been
checked, knobs are all original but the bandspread
knob is missing the little metal tension piece
since these were push on type. The front panel is
as close to a 10 as I have seen, with the only
cosmetic problems being some minor blemishes on
the top metal. It looks like some nerd placed
another unit on top of it without protection.
This unit needs an external speaker which I don't
have, although it sounds decent with just a 5"
P.M. speaker clip leaded to it.

I paid $130.00 for it, and would like to get
at least $100.00 back, or the best reasonable
offer. It is in Northern California, 40 miles
north of Sacramento.

I have a 500CX and don't ever remember having to have a jumper/plug assembly in the VOX socket before I picked up the VOX unit. I would be very careful when troubleshooting the 700CX. The finals go soft in no time flat while full power is applied in the tune mode. Are you getting relative output in TUNE? What is your idle bias current level? Welcome to the world of aggravation-Swan HF gear!!!

From: Dan Vaught <afarmer@roanoke.infi.net>
Message-ID: <36B77D84.372AFA98@roanoke.infi.net>
Source record: 90142

I am tired of replacing 12vdc batteries on farm tractor / riding lawn mowers / electric start generators / etc.due to lack of use / maintainence of charge during winter months. I am completing a storage building for these pests in another month or so and would like to build a battery maintainer / charger. There are several commercial maintainers / low-medium amp chargers out there - but I want to build one! I have really old plans for a totally automatic off version, but i would like to have something a bit more modern on design.
Does anyone have such, or have suggestions, comments (be nice!). Please reply to <afarmer@roanoke.infi.net>
thanks
dan

Any of those types should be replaceable with the 1N400X series. ! amp forward current at varying PIV. a 1N4007 is good for 1kV, IIRC.

I have 3 or 4 mil surplus modulator units from APS-104 search radar (likely from B-52 bomber - 1950s/60s vintage). These were used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual. Unused, still in original box, $65 (pick up only - exceeds UPS size limit) from southeast Alabama. 36330 zip. NOTE: Please REMOVE the "ns" AND REPLACE the "37" with "snow" to spell "snowhill" in my email or call 334-347-5281.

Hi Gang,

I'm posting this for a friend of mine who does not have internet
access yet. PLEASE CALL HIM DIRECTLY.

He has for sale a Hallicrafters HT-37 transmitter and SX-111 receiver.
They work well and look nice. Manuals are included. $250 for the
pair plus shipping from 50801. Please call Vern W0VV at 515-782-9879.

1862. FS: BC-610F Transmitter

Hi Gang,

I'm posting this for a friend of mine who does not have internet access yet. PLEASE CALL HIM DIRECTLY.

He has for sale a BC-610-F transmitter. It has a new Eimac 250TH final and two spare 250's. Included are coils for 20, 40, 80 and 160 meters; 2 spare 100TH's for the modulator; a home brew speech amplifier; a 708E-8A Collins PTO with home brew power supply for 160 meters; and a Johnson VFO-122 for 80 and 40 meters. Also included is a Dow-Key relay, back up plate transformer and an Astatic D-104 with a new crystal cartridge. There is plenty of paperwork on this fine old boatanchor. The rig looks pretty good and works well. Price is $675. Please call Vern W0VV at 515-782-9879.

Congratulations on finding this neat old boatanchor at such a bargain price! I'm not sure about the PS-2V, but you can download a copy of the manual for the AF-67 and other Elmac models from the BoatAnchor Manual Archive at http://bama.sbc.edu

Download as much as you like, and feel free to scan and upload your old BA manuals to support the project.

> I was wondering if anyone has any experience using 813's on 10 meters?
> Do they experience poor efficiency or insability problems on 10?
>

My cathode-driven linear with three 813 delivers 1 kW up to 21 MHz, 850 W on 24,9 MHz and 750 W on 28 MHz. The decrease is partly due to improper loaded Q (up to 24) in plate circuit and partly due to poor high frequency efficiency. No parasitic choke is necessary with these tubes, they are slow enough as they are. Neutralization is from pi-filter output to cathode (abt 10 pF) in order to have max output coincide with plate current dip.

Are you sure these are EZ81?? The EZ81 is a two-way power rectifier.

If you say output tubes, wouldn't they rather be EL81's, i.e. power
pentodes?

Don't have any of them, though.

Cheers,
Ralf

Greetings,

Anyone worked on one of these? It's a six meter transceiver, double conversion receiver. I picked this one up and it had some bogus tube substitutions, including a 6 volt tube where a 12 volt belonged. Problem is that the first mixer seems unstable and has a tendency to oscillate. More details to someone who might be familiar with the rig. I got a schematic from W7FG. Thanks in advance.

Doug Moore

To all,

A Tube Collectors Club is now taking memberships. See the website for more information:

http://www.eht.com/oldradio/tubecollectors/index.html

A group of collector-historians has recently formed the Tube Collectors Association. This is in response to the need for a focused group dedicated to the growing activity of collecting radio/wireless tubes and to sharing historical insight about them. As a tube enthusiast, you'll probably be interested in this development, and may want to help guide the activities of the group from the start.

Many years ago in a little town called Launceston in
Cornwall there used to be an electronics goodies shop.
They used to go to rallies and sell all sorts of interesting
stuff, trouble is I can't remember what they were called
and want to find out if they're still around and pass on the
details to someone I'm trying to help. Any ideas ?

p.s. I don't seem to be very good at finding things with
search engines or Yell UK hence the silly questions.

It is now sold.

Thanks all.

I have for sale a cherry Hallicrafters SX-130
general coverage receiver. I just used it last
night to WWV my wristwatch so I know it works,
and it also picks up C.B. pretty good, which is
unusual for a tube receiver. All tubes have been
checked, knobs are all original but the bandspread
knob is missing the little metal tension piece
since these were push on type. The front panel is
as close to a 10 as I have seen, with the only
cosmetic problems being some minor blemishes on
the top metal. It looks like some nerd placed
another unit on top of it without protection.
This unit needs an external speaker which I don't
have, although it sounds decent with just a 5"
P.M. speaker clip leaded to it.

I paid $130.00 for it, and would like to get
at least $100.00 back, or the best reasonable
offer. It is in Northern California, 40 miles
north of Sacramento.

Hi Eric,
It is not worth modifying it for higher output. Original tube is 2x6146 and can be modified to 2x6146B with higher screen grid voltage for slightly higher output but it will make no difference to the receiver side. You have to double the output power to get half S meter reading. You may consider 2x6LQ6 for higher output but the power supply will not be able to handle it. Stay with 2x6146.

The original 23 channel synthesized VHF tabletop by ICOM. 15 KHz channel spacing from 145 to 148 MHz. Full 10 watts output. Synthesizer has been z-wired in all 13 bad feedthrus to eliminate the classic intermittent problem in these rigs. Also, the two 1/4 watt resistors in the power supply section have been replaced with 1/2 watters in another classic failure point. With manual. A great second rig. $50 plus shipping. No COD's please.

The filter shown as F455N80 is not a 800 Hz filter, it is a 8 KHZ filter
from R-390A. The 200HZ crystal filter is from 75S3 which is solder type
and will not fit into 75S3C filter sockets. Note that this 75S3C does
not seem to have T9 which indicates it is the older type design. Buyer
should confirm that from the seller before bidding.

1924. EICO 753 VFO Drift, again

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-03 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.990203231830.13438A-100000@Ocean.CAM.ORG>
Source record: 90113

When this thread came up before, I mentioned an article that I did remember on fixing the drift through a radical means. I was looking for something else, and came upon the particular article.

It was in the July 1974 issue of QST, on page 31. "The EICO 753 Rides Again!" by Allen Wolfe.

As I mentioned before, he decided there wasn't anything that could be done to fix the VFO problem when mobile, so he replaced the VFO with a crystal oscillator, and used CB crystals (fundamental in the (MHz range where the VFO operated) for crystal controlled operation. The article doesn't give a schematic, but he does explain what's involved.

"The major problem with these rigs is the VFO....it just doesn't pay to rebuild it because of it's inherent mechanical and electrical deficiencies, especially for mobile operation. For a fixed location, it can be stabilized satisfactorily. But in a car, there are rapidly changing temperature conditions and vibration which cause frequency instability. The problem can be so bad that you just don't drift down the band, you bobble!"

However, he makes no reference to other articles that deal with the problem. It does sound like an awful VFO, but on the other hand, EICO was hardly top of the line.

It seems to me that since nobody's come forth with a specific article about fixing the problem, it's probably worth looking up old articles about temperature stabilizing VFO's and applying it to the 753. Perhaps it can be improved with voltage regulation; I have no idea what's in place originally If somebody has one with the solid state VFO, a three terminal regulator might be a vast improvement over what was there before. If the problem is not mere drift, but mechanical instability, there have also been plenty of articles about that over the years. Though reworking a VFO mechanically is bound to be more permanent than adding voltage regulation and some termperatur compensating capacitors.

A solution might be to disable the VFO, and build an external VFO to feed into the 763 in its place. One could build whatever kind of VFO they want, and yet not worry about messing with the original rig (which may or may not be an issue).

The author does mention putting two .001uF capacitors in series between the 7360 balanced modulator plates and the crystal filter (apparently this is a direct connection originally), to "prevent oscillation and make it easier to obtain carrier balance when there are slight changes in voltage, as in mobile operation". He gives no explanation, but he also adds a.02uF

capacitor and an 1800 ohm resistor in parallel with the existing RC network in the cathode of the 7360.

1927. Hallicrafters Village Radios FS (HT-1 and HT-2)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-03 00:00:00 UTC
From: W7LS <w7ls@blarg.net>
Message-ID: <36B92B31.A3@blarg.net>
Source record: 90116

Hi. For sale: one HT-1 and one HT-2 Village Radios, made by Hallicrafters for distribution to the Vietnamese during the war to report on troop movements. Brand new, unissued. I have schematics and a partial book. Spotless, inside and out. $125 for the HT-2 and $100 for the HT-1. The HT-1 covers 27 to 50 MHz. HT-2 also covers AM aircraft band. Runs on 8 D cells. They are basically handheld radios with long whip antennas on the side. Black. UPS or mail. Shipping extra. Money order or cashier's check preferred. Thanks. Jim W7LS

1928. Heath/Zeneth Digital Rain Guage Info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-03 00:00:00 UTC
From: "Donald E. Smith" <desmith@innercite.com>

I am trying to find out what kind of rain gauge transducer mechanism is used to measure the collected water for the Heath/Zeneth Digital Rain Gauge #EIA-416. This is manufactured by the Heathkit Company, maybe not as a kit.
Any information about this unit would be greatly appreciated. Will pay any costs for copying and shipping. Thanks Don

1929. Un-built Heathkit Oscilloscope

Has anyone seen an un-built Heathkit Oscilloscope for sale?
Especially the IO-4360.

1930. HRO-W value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-03 00:00:00 UTC
From: Bill Tyner <styner@budget.net>
Message-ID: <01be4fca$1a8a1e40$861b98d0@default>
Source record: 90119

I have an HRO-W w/ps and set of 6 tuning coils in their original wooden housing. I don't have the speaker. It functions and is in exc. condx. I can't find any reference to the "W" model in the short time I've looked. I searched the boneyard site and found seemingly every other model. Any idea what the value is? This rig has some historical value. It's a long story. There are some documents and a book involved so to the right person (me) it has that collector significance to it. Besides, with those brass knobs, it's really cool looking and fits right in with my 32S1 and 75A3 Collins pair (black crinkle finish and yellowing paper) hi!
Thanks for some educated guesses.
Bill (WX7U)

1931. Re: Multi-Elmac Pwr supply

I posted the schematics for the AF-68, M-1070 PS, and the
PMR-8 at:

ftp://bama.sbc.edu/boatanchor/downloads/ELMAC/

You will find many other boatanchor manuals one level up,
as well as other Elmac manuals right there.

I'd sure appreciate the instructions as to how to add 6m to
an AF-67 and maintain 160m

Thanks! & 73, DavidC K1YP

>
>Don, K4DLS (k4dls@qsl.net)

Don, I just repaired one of these that had a whole bunch of problems including bias problems, intermittent tuning, no AM, etc. I ended up tightening down EVERY screw and nut in the transmitter, and double checking to make sure that all ground leads on tube sockets, terminal strips, etc., were well grounded. This solved all the problems.

I was getting nowhere fast (didn't have a schematic) and voltages all seemed wrong; have had this problem before with other radios so this gamble paid off well. It's worth a try. 73 and good luck - John

1942. DRAKE TR-4 & MS-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-03 00:00:00 UTC
From: kd5gch@usa.net.NOSPAM
Message-ID: <mvQt2.3286$OS5.3431263@news3.mia>
Source record: 90166

I was just given a Drake TR-4 and MS-4 in decent condition. I plugged it in tonight, and it works, i.e. lights come on, knobs all work, when i key down on the mike, the meter needles go up, etc. So it appears to work.

I am new to ham radio, and have a FT-920, so I don't really need this rig. I am wondering what it would sell for. Cosmetically, it's got some dust, and so forth, but the front face plate is in excellent condition. All tubes light up. I am not sure if I should sell it or hang on to it. I have the manual, also.

Should I keep it and fix it up, or is it worth selling or trading? I saw a few adds on the web where people were selling these for around $250.
I can't decide whether to keep/sell/trade. Is the performance of these old rigs decent? I know it won't compare to new rigs, but I am curious, and may try to get it on the air this weekend.

Would appreciate any comments, etc.

Peace and 73.
Todd - KD5GCH

Adam Adkins wrote in message ...
+AD4- I am looking for replacements for some old diodes. The part
+AD4-numbers are 1N191, 1N458, and another that is marked only as a 500ma
+AD4-silicon.

The 1N191 is a germanium diode rated for about 100 volts and around 100 mA.
The 1N458 is a silicon diode with a voltage rating of 200 volts. Depending
on how these are used, ordinary 1N4007 silicon (1 KV, 1 A) diodes +AF8-might+AF8-
suffice. The forward voltage of the 1N4007 will be about twice that of the
1N191. And the switching speed of the 1N458 is faster than a 1N4007. If
either of these properties is critical, you will need better replacements
than the 1N4007.

1959. WTB: HF-156 man-pack HF radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-04 00:00:00 UTC
From: Nico van Dongen <nico.vandongen@digital.com>
Message-ID: <01be5029$2ced8f40$c170c610@utovandongen2.uto.dec.com>
Source record: 90033

Hello,

For my collection I'm looking for a HF-156 man-pack radio. It is a UK
manufactured 6 channel man-pack HF set made in the early 1960's by BCC.
The headsets are the same as used on the larkspur installations.

Donald E. Smith (desmith@innercite.com) wrote:
: I am trying to find out what kind of rain gauge transducer mechanism is
: used to measure the collected water for the Heath/Zeneth Digital Rain
: Gauge #EIA-416. This is manufactured by the Heathkit Company, maybe not
: as a kit.
: Any information about this unit would be greatly appreciated. Will pay
: any costs for copying and shipping. Thanks Don

Since I am at work and my rain gauge is at home, I don't remember the model.
It is the one with the red LED display. It uses a tip bucket. Every time
the bucket moves to the other side, a magnet passes a reed switch which
increments the display by 0.01 inches. If this is the correct gauge, I do
have the manual.

Cheers,

Greg WB6UHH

> silicon. Can anyone help me to find a suitable replacement for these,
> and let me know the source of the data?

The 1N191 is a germanium signal diode, and can be subbed by just about
any of the 1N34 replacements. The 500mA rectifier diode can be subbed
by a 1N4004 for example.

The 1N458 may be a Zener? Or else another small signal diode? I can't
remember. Try www.nteinc.com for sub info.

1966. Re: EICO 753 VFO Drift, again

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-04 00:00:00 UTC
From: Bis Wichy <wichy@dallas.net>
Message-ID: <79cesl$q6c$1@remarQ.com>
Source record: 90040

Quick comments:

I agree - but then again that technology is 25-30 years and it drifted back then too. QST has had several articles about PIC controlled VFO's with digital Freq readouts. Perhaps your 753 VFO can be replaced with one of them?

I have an MFJ 20M SSB/CW QRP rig. Only 2 years old. Works great on the desk - but it does drift when used in the car due to temp changes. It's an ALL analog radio... so yes even the new Analog rigs drift a little.

So all hail the might PLL !! (Phase Locked Loop) For a little background noise the tradeoff is a far more stable signal...

You CAN have the same quality signal with a tube VFO - but it would have to be physically overbuilt - looking more like it would fit in a tank...

This is one case when a few chips are one up on a transistor or a tube circuit.

I have a Collins 32V2 I have decided to part out. Hard decision because I'm already into the restoration but just not enuf time to complete everything. So you might be interested in the following.

1- 32V2 cabinet freshly re-powder coated (black), still in shipping box from paint shop, looks new.....$200. obo

2- 32V2 panel, a new match with cab, new silk screen as orig.......$100. obo

I have a number of slide rule dial reproductions from orig I had made.......$10. ea

The chassis will be parted out also, transformers, sub assembles, all (this hurts to do this radio is real clean). Its easier on me in the long run because of weight problem and someone might need nice parts. Let me know ur needs.

Hi, I've got a TR-4C, MS-4C, AC-4C for sale. The radio is serial number 34886. The radio might be a 9 out of 10. I never cared for that numbering system much so I have pictures available on the radio and speaker/supply. There is a scratch on the right side of the MS-4.It works great and I use it all the time you can hear it on the air any time in the evenings or Saturday morning, (depending on your location). E-mail at swb1@flash.net for pictures. I'm asking $400.00.
Thanks
Steve KC5TFL

Greg and groups, the name of the company isn't hard to find - it's somewhere here at the house. But let me share an experience (and some thoughts) with that company by a friend.
The friend mistakenly sent a cabinet which was not "straight" to this same company. The paint was well applied and certainly suited / matched the Drake paint - BUT, the damaged section was not fixed before painting, so it came back correctly painted and still damaged. The moral to the story might be - - be sure of what we ask for and what is included in the quoted price.
Also, the hardest part may be the fixing of whatever is damaged on a cabinet; from scratches to dents or holes. Without ever dealing with the company, I can not say what they will or won't do, what the process includes - such as stripping?, sanding? and if stripped, does the process take out any or all types of fillers one might have used?
What might be great would be if someone living close to or in Miamisburg would go by, sit down with the people in-the-know about the painting, go over their terms / conditions for painting / processes including stripping?,priming?, repairs to damaged cabinets?, etc. / prices / their & our desire to do business and kinda important to some - is there a quantity price break?
A posting of the results of such a visit would help many many Drake nuts at one time. I will be glad to assist in putting together a list of questions / thoughts if someone will volunteer to go by there!
dan
PS Krylon Semi-Flat Black will get really close to the base color / finish, but the splatter effect is another horse of a different color.
PSS I anticipate a price of $25 to $50 per cabinet for painting a "straight" cabinet

Comments - this fairly new person (Me) has talked a lot about a little known (to himself) subject!

>to run this by you experts first.

Remember that Radio Shack guys were asking "You want fries with that?"
last week. An amplified antenna is virtually useless on shortwave. What
you need is wire, as long as practical, as high as practical, and *outside*.
An antenna coupler/tuner can be useful in some situations, but a preamp
is worthless.

>Would you go with either of the Shack antennas for this model, or would you
>recommend an after-market unit? Should I expect a large improvement in
>reception with a different antenna? Sorry if this is a standard question.
>Please direct me to a web page if you have heard this one too often.

You want a wire antenna. Wire is wire, and can be bought cheaper at places
other than Radio Shack. Your local electrical supply house (or Home Depot,
Lowes, etc) is a better source. There are all sorts of designs for wire antennas.
There are end fed ones, center fed ones, phased ones, parasitic ones, etc, etc.
Get a book. The ARRL Antenna Book is one good source. Antennas have the
property of being reciprocal. That means an antenna that transmits well will
also receive well, so the designs used by amateurs (for transmitting) will also
work well for you for receiving.

Center fed antenna designs are nice becasue they require no ground connection
in order to work properly. End fed designs always need a good RF ground at the
feedpoint. That's often hard to provide properly. But the demands on a SWL
antenna aren't that stringent, the amplification in the radio can make up for a
multitude of sins. A simple end fed random wire, perhaps with an antenna
coupler/tuner, can be just fine worked against a simple ground rod or your
household cold water pipes. The 70 foot wire Radio Shack sells, used with
an L network tuner/coupler, can give good results if you get it up high and in
the clear outside. If you're stuck using an indoor antenna, your options will
be much more severely limited. Then you might want to try a tuned box loop.
Those are fairly easy to build too.

Antennas can be tempting targets for lightning. If you install an outside
antenna, take all the usual precautions to prevent conducting lightning
inside the house to your radio, or you. There's a current thread on lightning

protection going on here. Read it. It goes beyond what you'll likely need, but lightning is serious stuff, be aware of the potential hazards.

2015. Re: EICO 753 VFO Drift, again

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-05 00:00:00 UTC
From: avitko@harris.com
Message-ID: <79fg3j$9p3$1@nnrp1.dejanews.com>
Source record: 89991

On VFO drift, E.F. Johnson used differentially compensated circuits to adjust out frequency variations due to temperature.

This was done by using a differential variable cap with the common rotor grounded and connecting a NPO ceramic cap to one stator and a -750 ppm cap to the other stator. The remaining sides of the two fixed caps were connected to the stator of the main tuning cap.

This method allowed the correct amount of negative temperature coefficient capacitance to be adjusted in which offsets the positive temperature coefficient of the tank inductor. It actually works quite well and I have used it to stabilize some VFO's in other transmitters (notibly a DX-100) as well.

It will not help with frequency shifts due to mechanical vibrations however. Also, some redesign of the VFO constants will be required to maintain a decent dial calibration.

I have a Hallicrafters S-77 general coverage
shortwave for sale in Northern California.
This is the AC-DC version of the S40-B. I have
changed the power cord due to an aversion to
getting shocked and checked all the tubes.
This has 8 real tubes (octals) and one knob
which is less than perfect, the bandspread
knob, which has some chipping on it. This is
one of the more unusual Hallicrafters that
has a rotary bandspread on it. It has some
graying on the dial plastic, and the standard
black krinkle type paint, but does work well.
I would like to get $75.00 for it, and that is
less than what I paid. Proper boxing to ship
is about $15.00 for double boxing plus whatever
UPS wants.

I have on an odd one here. It is a solid state
oscilloscope made for Bell & Howell Schools by
Heathkit. It works (sort of) and gets a trace
and triggers, but the trace only covers about
2 graticules across the screen. Apparently,
someone built it and did not know how to
align it or it has a bad part somewhere. I
don't have the manual. Cosmetically it is
not to bad except for some spider webs from
the garage. It weighs in at a healthy 28 pounds
so you may want to pick it up in Northern
California.
All I want is $25.00 plus shipping or pickup.
It would probably take $25.00 to pack and ship,
so let's hope there is a collector/tinkerer near
me. I am in Yuba City, which is about 40 miles
north of Sacramento.

So far have stripped the paint from front pnl and case to bare metal.
Case is primed and curing, this was one dirtygreasy Mo' Fo' ! I used
industrial (as in NookLur Waste) freon degreaser to get the crud off the
chassis then Simple Green with bronze brush and paper towels to get down to
base metal/neutralize ....followed by a rub out with NeverDul polish to pull
crap out of the chassis pores.. The little radio looks OK-can we say shines?
But..... I am not confident that I can reproducethe Grey hammer tone as it
was..but close. FkIt! The set will work to electronic spec even if the final
paint is a shade off. Damn, the set only cost $10 last Sat at TRW with power
supply and cables in the first place but has been fun. Next plan? Try the
6146 X 2EA5881PP little nugget on the air..paint might still be wet. Thanks
for offered help!!

2031. FS: Old ARRL Handbooks

Newsgroup: rec.radio.amateur.boatanchors

Have the following Radio Amateur's Handbooks, from the ARRL, for sale:

1937: Covers poor and completely off, pages clean and very good: $20

1942 - Special Defense Edition. Cover worn on spine, binding good, pages clean. $20.00

1946: Back cover and spine cover gone. Front very worn. Spine repaired with book repair tape. All pages there and clean in very good condition. $15.00

1947: Cover on spine very worn at corners. Pages tight and very good. $20.00

1950: Spine repaired with tape, covers worn. Pages all intact and v.g. $15.00

1951: Tape repair on spine cover, but covers very good. Pages very good, but about 50 of them look water stained on one corner. $20.00

1957: Like new. Some very minor stains on page edges, but can only see with book closed. $20.00

1958: Moderate cover stains, especially on spine. Pages excellent. $15.00

1969: Covers worn, spine has book tape, pages v.g. and clean. $5.00

1972: Very good condition. $5.00

All plus shipping. Please email doragsda@polymail.calpoly.edu. Thanks.

I received a RadioShack DX-398 for Christmas, and am new to shortwaves. I live in an apartment and I'm guessing that the reception could be better. I went to the Shack and they suggested either their standard external antenna that you can tack to your wall or whatever, or better yet, they said I should get their battery-operated antenna so that I can just about pick up transmissions from the Voyager. I have had some bad experiences with the Shack guys not knowing what they were talking about in the past, so I'd like to run this by you experts first.

Would you go with either of the Shack antennas for this model, or would you recommend an after-market unit? Should I expect a large improvement in reception with a different antenna? Sorry if this is a standard question. Please direct me to a web page if you have heard this one too often.

Thanks,
Kevin

I use a slinky antenna which is extremely cheap (and pretty easy too) to build and it gives very good results. Much better than the whip. The past couple of days I've been experimenting with 2 slinkys connected together and a cut off stereo plug. For a basic set up:

Get a metal sliny at Walmart for instance ($1.89 I believe). Connect (solder) 20 to 25 ft of wire to one end of the slinky. Then solder the other side of the wire to a 1/4" mono plug. Stretch out the slinky vertically with the wire at the bottom end. Put the slinky up outside for best performance (I have mine on the porch). The wire shouldn't be too thin. I noticed a remarkable performance decrease when I used very thin speaker wire. I think I use #20 wire now.

Thanks to the orgininal poster of this slinky antenna.

Don't be afraid to ask questions. There's not such thing as a question asked too many times. :)

My manual is out on loan, but 20-30ufd at 350 will do it. You just need to get an appropriate size. Antique Radio has some quite small electrolytics that you can put below the chassis and just un-wire the originals. Don't think its the rectifiers, as they tend to short and blow the fuse or whatever! hi de Jeep - K3HVG

I am accepting bids/offers/trades for my Knight "Star Roamer" receiver.

It will come with the original box (abt a 5.9 out of 10) and all paperwork including the original manual and various part envelopes. It will also come with the original Knight antenna kit that was included with this radio in the box.

The radio is in excellent working order (abt 9.7 out of 10) and extremely clean. I believe I am the 3rd owner and I do not think it was used much. I would say, it looks like it was just built.

Thanks,
Chris "KX0Y"

2056. FS: Drake 1A $175

>

I doubt that you need a replacement S-meter. More likely the receiver needs to have all its capacitors replaced, and the resistor values checked. Sounds like something has gone T/U in the AGC circuit. Or, perhaps a weak tube or dirty bandswitch contacts could be the trouble.

BTW if you decide to clean the bandswitch contacts, DO NOT be tempted to remove the coil catacomb to make the job easier. If you do this, it is almost impossible to line the little fingers back up with the contacts on the catacomb.

Good luck - John

Try Harris semiconductor. They bought out Intersil, the folks that made
that chip originally. Their part # would be ICL7207A, with a suffix that
depends on what kind of package it is in (DIP, SOIC, PLCC, etc.).

Bob Weiss N2IXK

Could someone tell me the actual tube number for what is designated as J506 in the B&W 5100-B manual? I purchased this rig from a fellow in Canada and while it is in transit I would like to pick up a replacement for this missing tube....all the guy can tell me is that the manual states the tube number is J506....thanks!

Hello and thanks for reading this post.
I have just aquired a National HRO-5TA1 receiver and a matching 697 power supply. Everything lights up but there is a very loud AC hum on the audio. This hum is the same volume regardless of the AF gain setting. I assume I need to replace the filter cap(s) in the PS. My question is this, what value caps are needed (I can't read the values) or could there be another problem? I am also looking for a copy of the manual and what coil sets other than A,B,C,D are there? Any help would be appreciated. Thanks,
markus

<<.any thoughts..any ideas how to get tips on refurbing this unit?? Any>>

Hi manuals at P.O. Box 802 Council Bluffs, Ia 51502 has a reproduced manual for this radio in their catalog "L" for $15.65. I paid $11.35 for a manual for my NC-140 and it was a complete owners manual with schematics and looked real nice. As I understand it, his prices are figured on the amount of information provided.

See ya, JRob

Source record: 90026

According to the manual, J-506 is an 11-contact Amphenol receptacle. It is used as a connection to the 51SB-B single sideband generator. There is no tube J506. All of the circuit symbols that begin with the number 5 are associated with the power supply.

I suggest you order the manual and the acompanying service notes. I got them from Pete Markavage, 27 Walling St., Sayreville, N.J., 08872-1818. Tel: 732-238-8964.

You should be aware also that there was a problem with Jones plugs P301 and J505. If they ave not been repalced, you could blow out the high voltage rectifiers. I didn't know this until mine blew out and a friend, who knew about the service advisory on this, found the problem and fixed it.

Hello all,

I am trying to determine the value of a TU-5B tuning unit.
It's in excellent condition, with calibration card and a
1943 certification tag still attached.

It is one I have had in my boatanchor collection for years,
and I want to sell as it doesn't fit my 'theme' of 60's
ham gear. But I don't want to play the 'ebay' game, while
still getting a fair price for it.

Thanks for the help,

From: cnord@snet.net
Message-ID: <36bce290.1666258@news.snet.net>
Source record: 89911

I made a (temporary) dial cover with a large piece of plastic used for
lamination. There are several places that make replacements and I plan
to order one of them.
I have the a similar problem with the S-meter and will be interested
in what you learn.
I replaced all out of spec resistors, and most tubular caps and
aligned it. It is better but still "scotch"
. Someone suggested there might be an internal shunt that has drifted,
but I have not yet pulled it apart. The sensitivity seems fine, just
that the S meter seems low.
If someone offers a magic bullet, let me know.

Replace all the resistors and condensers. Use 1W flameproof resistors and Sprague Orange drops for the condensers. Bypass the audio cathode resistors with high values e.g. 1000mfd 25V for the output section. Throughly clean the unit. A good frequency generator and counter are needed. I strongly advise using coolers on the rectifier and output. I have done all of this on mine and have a better S reading on strong signals. The bias resistor, 900 ohms should be at least 10W and the resistor from B+ to the V.R. should be 25W. Use a grounded cord. An NTC resistor of 16 ohms cold will greatly reduce the inrush current thus saving the switch. Doing all this will make a great difference. The use of 1W and larger resistors is to reduce the noise generated by the resistors in the early stages.

Message-ID: <79jdhk$b86$1@nnrp1.dejanews.com>
Source record: 89916

I have an HQ-170 for sale. The problem with the receiver is one transformer has the base melted from the mica condensers shorting. This is fixed by using fixed condensers in place of the ones in the base. I have heard this is a much better way even for good transformers. It has been restored and aligned from the bad transformer on. It is in good condition. The bad transformer is in the receiver making the unit complete. I am asking $150. E-mail me directly at vincentelectronics@erols.com.

I too have a RS DX-398 as well and live in a steel & poured concrete condominium building as well. I too am not fond of the knowledge (mainly lack thereof) of the local RS staff. I first tried RS' reel-up external antenna and it worked quite well when I strung it across the top of my windows. I am currently using a metal Slinky (yes, the toy that goes down stairs, chairs etc) and an alligator-clip to 1/8" plug wire. The plug wire can be bought at your local RS store (can be assembled & soldered much cheaper, but the RS deal is always there if you're travelling and forget or break your wire) and the Slinky can be bought at probably any department or toy store. I've only been using the Slinky for a few weeks and currently have it hanging vertically from the top of my window. It certainly looks a lot better than the stringy reel-up antenna wire and it works considerably better. I haven't tried it horizontally yet, but will probably do that later on this week. The only tips I can give with the slinky is to *make sure* that it's not touching the metal window frame or any other metal. I originally had it hanging by two paper clips but was getting some really strange (heavy overload on FM, weaker signals on MW/SW) results until I isolated the Slinky from the paper clips with scotch tape. Good luck & happy hunting... so far the Slinky has netted me quite a few more signals compared to the built-in antenna and better results than the reel-up antenna as well. On the FM band, I'm consistently & clearly picking up radio stations that are at least 250 miles away from me. On SW & MW, I've been picking up quite a few things from the Pacific Rim & Australlia and I'm in Florida.

Sean Mc.

Last week I bought this rig because it came with an accessory I wanted and the owner wouldn't split.

I had it on the bench and working for 2 or 3 days when the power-supply blew-up. It had been setting for years and I figure one of the electrolytics dried-up.

Cosmetically the faces and cabinets are nice. I'd get to fixing it, but I have another and never intended to keep it anyway.

Will sell for $150 (no less) and shipping (USA only please) Sold AS-IS. Please respond only by E-mail.

Thanks

Dan

I have the subject xmitter, it is now set for 1480KC is 500 watts.
was the old back up unit that was no longer needed...
uses 3 833A's, virtually a complete unit. have all tubes for it.
meters, 2 of the 4 meters need new glass in them. cabinet in
nice shape. inside will need the usual 'dusting' out...
i also have the schematic for this unit...
would make a great 160 meter rig for those who like that.
sorry, this would be a pick-up only unit....in Jackson, Mich. 49202.
email me if interested, or call at 517-789-8702...if you get no answer
i may be on the internet (only one line here for now.)

There is a spot on the left-rear of the receiver for an in-built
dynamotor that plugs into the receiver. You might want to look
and see if the dynamotor had been replaced in the past with an
AC power supply that was built into the same area where the dynamotor
went. This was a common conversion that was done by hams
to these receivers way-back-when.

As I remember it, the dynamotor may be one of the smaller units
like the ARC-5 receivers used that had three connector pins
on the bottom. one was gnd, one was 24 volt dc input, and one
was b+ output of (I think) around 250 VDC.
Filament supply was directly from the connector on the back
of the set which I think was an 8-pin cinch-jones type and not a 5 pin.

Does it look like the original connector in the lower-center of
the back of the set was replaced ??? Originally, the BC348 slid
into a shock-mount for aircraft use. They were the companion receiver
to the Collins ART-13 transmitter..

Source record: 89947

I have an HQ-170 for sale. It is complete and mostly aligned and fully restored. It is in good condition. The only problem is one of the transformer bases is bad. The trimmer condenser in the base shorted causing it to melt. The transformer is in the radio. Fixed condensers will replace the old mica types better. I am asking $150. E-mail me directly at vincentelectronics@erols.com.

From: Zvi@hotmail.com
Message-ID: <36bdfb0d.168403@news.mnsinc.com>
Source record: 89948
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.audio.tubes

For sale:

500 Watt Tube Audio output transformer - NEW and never used.

4200 ohm 2500 WV DC-rated, center-tapped primary designed for
running SIX 811A tubes in series-parallel but can also be used with
similar triode combinations.

This beauty also has a 20V feedback winding.

Ideal for that really powerful guitar amplifier, public address
system, or instrumentation.

Secondary is 10-18 ohms, center tapped.

Rectangular case has dimensions - 4.5" X 5.5" X 7.0" Tall.
Flat mounting by four studs on underside. Ceramic terminals
protrude on underside.

Rated at full output down to 200 Hz, but far better at lower output
levels. Gray potted finish.

Will sell for only $45.00 plus shipping (28 lbs) from ZIP 20877

2136. FS: Tube QRP Transmitter & other electronic items

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-07 00:00:00 UTC
From: Zvi@hotmail.com
Message-ID: <36bdfff0.1419420@news.mnsinc.com>

For Sale:
(Add shipping costs to all prices unless stated)

Large UTC choke Model PA104 $15.00

Stromberg Carlson 50 Watt Audio Amplifier with Push-pull 6L6 tubes
in excellent condition. Two MIC inputs and one phono. Has built-in
turntable. Clean condition. Untested but will guarantee good
transformers, and complete. $50.00

CPCW-5 Tube QRP Transmitter with 80m coil. 120V AC operation.
Uses 6C4 and 6AQ5 etc. Brand new. Factory built. Only used once, comes
with manual. On CW runs 5 watts, and AM 1.5 watts cathode mod.
QSK on CW. List $99.50 - Will sell for $50.00

Fujitsu Color Printer Model DX-2300, Low miles(!)
This is a dot matrix prinbter, but made very well, and in excellent
condition. Uses tractor feed or single sheet plain paper.
With manual - only $25.00

Books:

1981 ARRL Handbook, excellent condition ONLY $8.00

Television For Radiomen, by Ed Noll. 340 pages, illustrated
1962. Front cover torn a little but otherwise very good $3.00

TV SICK? Service your own TV, by Belmont TV Co.
33 pages, plus sale flyer, 1975 MINT $2.00

METHODS OF TEACHING SHOP AND TECHNICAL SUBJECTS by Leighbody & Kidd
College text, 201 pages, excellent condition $3.00

All four books for $13.00

EICO Model 666 Tube tester Manual $7

Hallicrafters Manuals:
HT-46 $8.00 each (1 repro only)
SX-146 $8.00 each (1 repro only)

2138. FS: Drake TR-4 / AC-4 / MS-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-07 00:00:00 UTC
From: kd5gch@usa.net.NOSPAM
Message-ID: <Z4nv2.5858$OS5.6200560@news3.mia>
Source record: 89951

For Sale:

Drake TR-4 Transceiver + AC-4 Power Supply + MS-4 Speaker

Comes with original manual, and cables.

Very good cosmetic condition -- this rig is older than me.
Top of TR-4 case has scuff marks in the paint and two small
dents from the feet of the MS-4/AC-4 that rests on top of it.

Front panel on TR-4 is in excellent condition, and all knobs
work and are present.

Powers up fine, all tubes light up. I have not tested the
tx/rx abilities, and I am sure it needs to be aligned and such.
Because it is so old, and I have no way of knowing how well it
works, the units are sold as is.

$275 + you pay shipping from Baton Rouge, LA 70808
(I will ship it any way you like, as long as you cover shipping costs)
Will ship same day money order is received, or wait 5 days for your
personal check to clear.

To be sold as one package, I would rather not separate the units.

Email if interested.

Source record: 89952

For Sale:

SBE 33 Transceiver (Serial #1148) + Gonset/SBE SB33
Power Inverter (Serial #1023)

Comes with original manual.

Good cosmetic condition, but some scratches on top panel.
Small crack in power meter.
Have not tested this unit's functionality but it looks to be in order.
I have no way to supply power because I am not sure how the power inverter
works. (says 12 volts DC --> 115 volts AC)

$100 + you pay shipping from Baton Rouge, LA 70808
(I will ship it any way you like, as long as you cover shipping costs)
Will ship same day money order is received, or wait 5 days for your
personal check to clear.

To be sold as one package, I would rather not separate the units.

Help, I bought a cosmetically challanged Hammarlund SP-600. It works like a dream, but it needs cleaned, painted and the RF meter needs replaced or fixed! Can anybody help me with this. I'm open to sales or suggestions. Thanks parkersxs@aol.com

2142. Help with main tuning knob removal on a HRO-5TA1...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-07 00:00:00 UTC
From: Markus Thomerson <mdt@powr.net>
Message-ID: <01be52e2$528161d0$6bd7050c@mdt>
Source record: 89955

Hello to everyone on the list and let me apologize in advance for my incessant questions.

First, I want to thank all of those who responded with advice on my initial PS problem for this HRO and that problem has since been solved.

I now have two more questions;
1) My first question is about a cosmetic problem. The main tuning knob has lost the majority of paint on it. I would like remove the knob and repaint it but I cannot seem to figure out how to get it off. I loosened the set screws but that didn't appear to have any effect.
2) My second question is about the plug in coils. How do you convert a coil from a bandspread coil to a general coverage coil?

Any help or direction would be appreciated. Thanks for reading this post, Markus.

From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <36BD566C.A12DFCE4@yahoo.com>
Source record: 89959

Hello,
I have what appears to be a new and unused Collins Round Emblem
516E-2 mobile power supply. Has original warrantee and inspection tags.
No dust, scratches, etc. Manufacture date was some time in mid
1974 judging by the date codes on the pass transistors and inspection
tag rev date. Box was opened and manual is missing, but appears to
have never been powered up.

Would like $130 + $12 for shipping and insurance

thanks,
Joe K7JOE

I have a nice SX-111 for sale. This receiver features 80-10 meters,
notch filter, dual conversion and crystal filter. Cabinet was
pro-finished, power cord replaced with three conductor heavy duty, it
has the built in crystal calibrator,
everything works great. Two knobs are incorrect. $145+shipping

I'm not in the shack area at the moment, but I'll try and get the info to you tomorrow, although all the 348's I've seen have a 12 pin (or so) connector! Sounds like someone has modified it. If you slide the case out, look for the dynamotor tray. If the dyno is there, it probably hasn't been modified. If the tray (at least) is there, the filament and B+ connections are marked. You can trace those connections to the 5-pin connector you talked about. Remember, B- on the 348 is NOT ground, it floats! So if you decide to make an AC supply, wire it so B- floats above ground. I've found that +230 volts @ 85ma. works fine for B+ and if you run the 24v via DC, its better. Just use a bridge rectifier block and a bit of filtering. Let me know if this works for you.

I was helping my neighbor with his Halicrafters SkyChampion S 20 R today. The rig has no B+, I thought the rectifier tube might be out so I attempted to test it on my TV-7. There was no marking on the 4 prong tube, I assumed it was an 80. I got no indication on the TV-7 and the filaments barely glowed on the 5 V. Can someone tell me what tube this is? The transformer is putting out HV AC. Any other tips that I should know about this rig?

Yes, unscrew the captive screws that lock the radio into the case.
They should be next to the front handles on the radio panel,
and then pull the radio out of the case from the front. On the top
of the internal chassis and to the left-rear is the spot where
the dynamotor would have been plugged in. You <might> find a power
supply that had been built into that space.

Many newsgroup areas are for discussion and not specifically for
the buying and selling of equipment.

It is a common convention to post amateur radio equipment
for sale or wants to either the " rec.radio.swap " or
rec.radio.amateur.boatanchors newsgroup.

Most people looking to buy and sell amateur equipment will
look in these two areas. Aside from that, newsgroups such
as " rec.radio.amateur.digital.misc " may have both discussions
of techncial stuff but also <some> postings for the sale of equipment
such
as TNC's and equipment related to amateur radio digital communications.

cross-posting an item for sales to lots of amateur related newsgroups
may sound efficient to a newbie, however it is better to post sales
to the newsgroups that are created for that purpose.

cheers..

Trish

Dear Don, I assume you're speaking of this ad?

I have a large amount of tubes and some test equipment for sale. If
interested, call E. Lonneman at 612-854-8152. Minneapolis Minnesota

E. Lonneman

If you are not, then I appologize. If you are, I will explain. I am not
the seller of these tubes and test equipment. The seller is Mr.Lonneman,
who does not have a computer. I only did this as a favour to him who I
worked with for about 30 years and know and trust. This has become more
trouble for me also as I have had to explain more than one time. It kind
of takes the fun out of it. However I can understand the other parties
intentions because they do not want to call long distance so its kind of a
rock and hard place for both sides.

I dont think you will be bothered by this ad anymore because he feels it is
not worth the trouble to sell tubes via internet and has proposed to dump
the entire 1000 plus tubes (he was in tv repair) in a land fill to get rid
of them...Unless he can find a major buyer for the entire lot or large
portions of it....no more ones twos, fives ect, he's going in the red on
this.

Sorry if this ad has caused you heartburn.

I'm interested.. Are you sure that's not a Modulation transformer? Can
you provide a model or part#, or some more information about the
secondary winding, that is, does it have separate taps for the 10 and
18 ohms on the output winding, and is the winding then center tapped?
Those are strange impedances, why I ask..

Thank you,
Pat Jankowiak

From what I have seen the R-388's are bringing from 300 to 400 dollars. Not working and modified less. The 101's 100 to 200 dollars. If he is thinking of selling 388 I would be interested. Gary

2161. RDX-75 20m CW XMTR

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-08 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19990207205056.11871.00000114@ng133.aol.com>
Source record: 89834

A friend brought over a boat anchor I have not seen before, an RDX-75. This xmtr was made by D&A Mfg, Scottsbluff, Ne. I would guess that it is from the 1970's. This rig has sr# 14419. It is a cw-only transmitter, 20m only. He asked me to have a look at it, as it does not work.

Well, I imagine that this is an incomplete chassis, perhaps found when the plant closed. It most certainly has never been fired up as 1) the xtal socket is not wired, and 2) the key jack is not wired.

The chassis has (4) 6JG6 tubes, private labeled with "RDX-75". This may have been a kit.

Anyone know this box? I'd like to complete the wiring and put it on the air, too.

Thanks for any help,

KMB

I have a number of collins 455khz filters, though I do
not know if they are for a 75a4. A couple with am bw,
cw bw an 2 sets (4 in all) of usb and lsb filers.

The usb / lsb pairs are brand new. Blue plastic case
never been used. I can get the part numbers if you
or any one lese are interested. Probably want about
$40. each.

Chris

I spoke too soon! The reason there are only sweep tubes in this box is because it is a CB amplifier disguised as ham gear. The absence of any oscillator tube finally struck me as I began to draw a schematic for the rig. So, while the crystal socket was not wired, there is a connection(so-239) for a "vfo." This is the antenna connection from the CB set!

I guess I didn't realise that the illicit manufactures were ever that concerned as to hide there product in a cloke of legitamacy.

Looking especially for a rack mount version.

Thanks very much for the information Young. I knew it was an out-board unit and
made by National but was not aware that the "dog-house" name had not been used.

If anyone has a picture or a schematic for it or a repairable or just one for
sale, particularly if it is a rack mount unit, please get in touch. Will pay
any reasonable fee. If I can obtain a clear picture of the front panel and a
schematic, I can fashion one to my liking and will share what I learn.

Very 73 to all,

Doug

Hi,
THe Doug House ( hi ) power supply is used only for the National receivers like
HRO-5. The Power supply for Hammarlund receiver is either a rack mount or plain
chassis type. YOu should ask for " Super-pro " power supply.
Best luck.
de K6hm

Won't this stuff have a higher resistance than copper wire?

If so, some of your RF is going to be wasted as heat.

Hello,

You have asked for 7768 valves many times before, and I have posted
this message many times. Haven't you noticed?

7768 General Electric NOS, NIB are in stock. This is a very special
valve with a transconductance of 50mA/V and u=225
I can find a few more data for you if you want it. This is a rather
expensive valve NOK 760.- each or about US$ 103.-

Best regards,

Arnold Goksoyr

> connector on back of set?

The original connector on the back of any BC-348
should have eight contacts in two rows. If it has
a five contact plug, it's been "hammed," meaning
hacked/whacked/chainsawed/modified, and there's
no way to know what pins go where without tracing
the circuit. Sorry OM!

If the internal circuits haven't been destroyed
by these "improvements," then the receiver requires
220 VDC with the B- NOT GROUNDED, and 28 volts
for the filaments. Since the power connector has
been changed, it's likely the filament string has
also been "hammed" so that will also need to be
hand-traced.

Good luck with it. They are absolutely worth the
effort to repair. With a properly matched speaker
and the proper power supply, the are excellent-sounding
radios with plenty of output.

With all respect to Trish, who is as sharp as they come,
this is not correct. The dynamotor for the BC-348 is a
DM-28, which does NOT return the B- to ground. The BC-348
developes grid bias for the audio output stage by returning
B- through a voltage-divider circuit. Grounding the B- in the '348
was and is a common error spread throughout the ham magazines
in the 50s and 60s and still results in poor audio and damaged
audio stages to this day. When powered correctly,
aligned properly and provided with a properly-matched speaker,
the BC-348 has plenty of high-quality audio power.

Kind regards,
Dave Stinson AB5S

I've just recently, cleaned up and re-stung an old Heath Cheyenne MT-1,
somewhere down the line it was modified and an additional switch was put

on the faceplate for TX. My question is, does an unmodified Cheyenne
need to be put in Standby for recieve? In other words, does the
transmitter interfere with the reciever due to the occilator running
when sitting idle in the CW mode? If not I'd like to restore it to it's
original configuration, if so I want to add a QSK circuit to it.

Anyone know? What a nifty transmitter for $30, who said HR was expensive

:)

Hello Dave.. hmm so wouldn't the voltage divider be
external to the dynamotor and the dynamotor still
only have three pins ??

It's been so long since I've pulled one out of a
BC348 and not an ARC-5 receiver that I forget exactly
what the pins looked like..

Trish

Thanx Dave.. I've had three BC348's in my life, and I wish
that I had kept at least one of them. I used to use one
with a Knight-kit T-60 back in 1967 while living in
the Haight-Asbury in San Francisco.. A wild time.. :-0

With all due respect, there are even places cheaper than Lowes and Home Depot. find a "farm & fleet" store, the kind of place that sells tractor parts, dog kennels, livestock tranquilizers (grin) and Carhartt coveralls. You can usually recognize the place by the piles of feed, fertilizer, and huge plastic tanks in the parking lot.

Anyway, go inside and ask for electric fence wire. You'll be directed to spools containing wire by the MILE. It's galvanized steel wire, 16-18 gauge usually, and it's WONDERFUL for antennas. The steel is much stronger than the soft-drawn copper you'll get at Lowes, it's not insulated so it won't be carrying extra weight, and the zinc coating solders very, very well. And it runs (last time I checked) about $20 per spool.

I worked with a fellow at Universal Radio in Ohio who went to buy a spool, and at the checkout they asked him if he was in the farmers' discount program. (A discount program for farmers, as you might have guessed.) He said yes, so they gave it to him for half price. He's still using that one spool of wire to this day.

If you can't find a farm & fleet store, check the various discount places ($1 stores, overstock / closeout stores, or even K-mart in a pinch). You'll find little blister packs of "utility wire," usually 50 or 100 foot rolls for a buck or two. It's the same stuff, just more expensive per foot.

Dave

2200. FA: Sony 5100 Earth Orbitor SW Radio

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-08 00:00:00 UTC
From: smokedtofu@aol.com
Message-ID: <19990207201405.25302.00001387@ng26.aol.com>
Source record: 89979

For Auction on E-bay

Sony Model CRF-5100, "Earth-Orbiter" 10 Band Receiverï¿½

Covers the following bands:

VHF Air=108-136MHz, FM=87.5-108MHz, LW=150-400KHZ, MW=530-1605KHz,
SW1=1.6-3.5MHz, SW2=3.5-9MHz, SW3=9-14MHz, SW4=14-21MHz, SW5=21-26MHz,
PSB=147-174MHZ

Runs off of A\C or batteries.

Features include: Volume, Tone, Squelch, BFO, RF Gain, Tuning and Fine Tuning, Tuning Meter and AFC controls. Earphone jack too. Lighted dial with switch for conserving batteries, lights work full time with A\C power. Tape recording jack, external antenna, connections on back panel. Telescopic and internal antennas. Handle on top. I have cleaned all the controls, switches and cabinet exterior. Batteries have never leaked in radio. I have had this radio for a few months and decided to make room for a new Zenith TO. I do not smoke. Telescopic antenna is in perfect condition and not bent. Radio includes a reprint of the original operators manual.

The radio is sensitive and receives very well on all bands and I have had many hours of enjoyment from its use. It is like the CRF 5090 that sold a week or two ago but Sony decided to add a Public Service Band to this model and call it the 5100. A neat thing is that there is a red light on the tuning pointer that glows red when a strong signal is achieved.

ï¿½This radio was purchased without the folding face cover with it. I found a replacement from a parts radio someone was getting rid of, but itï¿½s not pretty. If you slide it in under the radio where it fits, it displays nicely and you can use the metal map plate on the inside. I will include it if you would like.ï¿½

ï¿½Buyer to prepay by MONEY ORDER within 7 days of end of auction and pay actual S&I costs. Radio weighs 14.2 pounds if you would like to figure out shipping costs to your zip code. Be sure to email with questions before you bid.

This radio is in extremely fine condition and has been well cared for. I hope whoever wins the bid will enjoy it as much as I have. Thanks.

Hello Brian,

What do you want to use the 807s for? They can handle up to 75 watts each in
Class C CW, 60 watts each plate-modulated. A pair will produce up to 120 watts
of audio in Class AB2.

I can supply more details if I know the application.

> I dont think you will be bothered by this ad anymore because he feels it is not worth the trouble to sell tubes via internet and has proposed to dump the entire 1000 plus tubes (he was in tv repair) in a land fill to get rid of them...Unless he can find a major buyer for the entire lot or large portions of it.
>
> Sorry if this ad has caused you heartburn.
>

The ad wasn't the problem; it was the endless multiple
repetitions of it that was the problem.

The reason it's "not worth the trouble" for him to sell
via the net is that he's not using the net properly.
In fact, he's not using the net at all. No webpage;
not even an email address. In fact, not even an
inventory list to fax anyone! Makes it kinda
hard/costly/time-consuming for people to respond
doesn't it?

I'm IN Minneapolis, AND interested in this kind of
thing, AND possibly interested in purchasing everything
as a lot; but I didn't even think twice about
responding because there was no inventory list. It was
the kind of ad you see where you instantly say to
yourself "that looks like a royal pain in the...,
CLICK, next ad...".

If he does up a -detailed- list, he can email it to
me. In fact, if he does such an inventory, you could
then post the list here with his phone number, ONCE OR
TWICE. Even without an email address to respond to,
THAT would still be a halfway decent ad, since people
would at least KNOW that he had something they wanted,
BEFORE placing the long-distance call.

In short, right now he's not using the net right, so
the net's not working for him. Make sense?

Hope this helps a bit in understanding the negative
response you've gotten.

Richard

I like that one! I too have used the #12 solid-copper wire trick for years. I've also made some 'weird ones' like Jack. I once bent one up which was 4.5" long, and used it for bending plex. At the 'low' position on the switch it was the perfect temp.

2215. WTB AMPLIFIER, 500-1kw, 1-30mhz, inexpensive

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-09 00:00:00 UTC
From: Richard <rhager@ahha.com>
Message-ID: <36BFE53F.90BE6E0E@ahha.com>
Source record: 89785

Hello,

OK, here's a strange one for you amp experts...<g>

I've been putting together a small high-vacuum setup for thin-film work. I will need a moderate-power RF source for various experiments with plasma etching and sputtering.

Because I still have a lot to learn, I don't want to invest kilo-bucks in a commercial amp, only to find later on that I need something different.

I'm looking for a 500-1,000w amp with tube outputs (for robustness into strange/undefined loads <g>), and wide tuning capability. I've heard that one of the older Collins models (30L1 maybe?) had an output tank capable of tuning any frequency between 2 and 30mhz. Is that correct? Are there any other brands/models which would also lend themselves to such "any HF freq" tuning?

I'd also prefer something which uses readily available and cheap tubes. I'm still a little ignorant of -which- tubes meet those criteria, but it does seem that some are much more available/cheap than others. For example, I don't think I want anything which uses 8874's !!

Are 813's a lot harder to get than 811's? 3-400's harder to find than 3-500Z's?? That sort of thing.

Another possibility would be to start with a box of parts, but I would much rather start with an assembled RF-deck, to save a LOT of hours of design and construction. On the other hand, I can fab the PS and/or control circuitry pretty easily, if that's required for a certain model.

As this is just a personal pursuit, I can only afford a few hundred dollars.

I'll appreciate any suggestions of good models to look at, and/or offers of sale at a good price. If it's not too much trouble, please "reply to both" to also send a copy to my email.

Thanks very much for your collective wisdom!

Surely do need a copy of manual for Swan DD-7(6 I believe) digital display for Swan transceivers. Copy would be fine. If you have one, I can copy it here if you are willing to trust me for it's return. Or - I would send some amount of money as assurance of it's return. Or pay you for copy costs and postage. Or buy the manual. marijimc@axs.net Thanks, Jim

2217. WTB Big Bad Tubes <g>

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-09 00:00:00 UTC
From: Richard <rhager@ahha.com>
Message-ID: <36BFEA58.4D39523C@ahha.com>
Source record: 89787

Hi,

While I'm at it, might as well ask about some other items I need....

For my thin-film setup, I need a number of high-current electron-beam sources. I am going to try using power-tube filaments/cathodes for this.

I would like to buy your old dead power tubes; the bigger the better, although all sizes will yield useful material. Low/no output, gassy, or even broken glass is fine. Large thoriated tungsten filaments are of special interest, although again, any power tube will be of use to me just for it's content of high-purity nickel and molybdenum alloys, etc..

My main criteria is that it be -cheap-.

Or if you'd prefer to trade, I have some parts which might be desirable to some. No BA stuff, but lots of 60v power MOSFETS, 50v large electrolytics, etc..

It's a strange destiny for an honorable tube, I agree, but better than having that grand old firebottle go to the dumpster.

Also looking for:

Working magnetrons, prefer the older type with the external magnet assy's; any vacuum gear like valves, piping, etc.; refractory and specialty metals in strip/wire/sheet/tubing forms, like moly, tungsten, tantalum, niobium, indium, nichrome, platinum, rhodium, etc., silica/fused-quartz items, graphite items...

Older books on vacuum techniques, instrument-design, thermionic and electron-optic design and fabrication, electrochemistry, semiconductor device design and fab from the 50's and 60's, especially thin-film infrared devices or hi-speed diode types, etc....

Basically, if you have any 'strange' <g> scientific material gathering dust which is even vaguely related, be sure to email me about it.

Thanks very much,

Richard

BUT - what does this 17 times greater resistance mean in practical terms? If Copper is a tenth of an ohm, even at 17 times worse, steel would only be 1.7 ohms, and could therefore be neglected as an important loss source in a 50 Ohm antenna dipole.

I have tried to get the answer to this question before and apparently nobody knew the practical effect. I will be putting up a tower this summer and want to use the (insulated) galvanized guys as an inverted vee antenna system.

Can anybody predict the practical difference in loss resistance between the very large galvanized guy wires (surface area corresponding to 1/4 inch dia) and the much smaller copper "standard" wire of 12 gauge or so? If the guy wire surface area is 17x the copper, is it a wash? Is it frequency dependent?

Source record: 89806

Hi Bob,

If it's an EZ81, it's a rectifier. EZ81 crosses to the US 6CA4. A smallish stereo integrated from the 60's (like H-K) would typically take two of these. If it's an EL84, then it's a pentode power tube that crosses to US 6BQ5. There would typically be 2 of these per push-pull channel (I don't think H-K made anything that wasn't push-pull). Either way, you can get the tubes at http://www.triodeel.com at really good prices or at http://www.tubesandmore.com at higher prices but a little faster service (sometimes).

If it's really the EZ81 that's gone, you should plan to replace your power supply filter caps, since a bad one is probably why the rectifier is blown (those tubes are tough).

Check out rec.audio.tube newsgroup. Many tube audio folks there.

Yes, it can be predicted. Unfortunately, the rigorous calculation of the RF resistivity of plated wire is complex. However, if the plating thickness is at least a few skin depths, the plated wire behaves for practical purposes like it's made only of the plating material, and the calculation is simple. If you don't know the plating thickness, you can do the calculation for each material to get an idea of the limits. For example, a galvanized wire would have an RF resistivity greater than that of zinc but less than that of steel (which is much more resistive at RF). (Actually, there are plating thicknesses for which the combined resistivity is slightly greater or less than either material, but not by much.) Equations for calculating the RF resistivity of wire can be found in a lot of sources, but probably the easiest way to see the impact on an antenna is by using one of the readily-available modeling programs. The free demo version of ELNEC, available from www.teleport.com/~w7el will easily do this. You simply model the antenna with no conductor loss, then with the DC resistivity and relative permeability of the wire or plating (although there can be a catch here; you have to know these parameters at least approximately), and compare the results. The loss is frequency dependent, because the skin depth and hence the RF resistivity is a function of frequency. For full-sized antennas with a constant wire size, the amount of loss becomes greater at lower frequencies in spite of the greater skin depth. This is because when you halve the

frequency, the antenna length doubles but the skin depth (and RF conductivity) increases only by the square root of two.

To answer your other question, if one wire has 17 times the RF resistivity of another, it has to have 17 times the surface area (not 17 times the cross-sectional area), of another wire in order to have the same RF resistivity. So its diameter has to be 17 times as great. This assumes that the skin depth is only a small fraction of the diameter, which is a good assumption at HF and above for antenna-sized wires of reasonable conductivity.

Very nice Hallicrafters station for sale. Currently in operation. The transmitter has full output and is in excellent condition. The receiver is in slightly poorer condition in that the main tuning knob and one small knob are chipped but it has the crystal calibrator.
The transmitter has an internally installed T/R relay with a small power cube plugged into the external AC socket. It's a nice job and really makes the pair switch together very conveniently and all the cables to hook them together are included. Also includes a microphone, original HT-32A manual and, copy of SX-101 Mk3 manual.
The R-46 is original including grill cloth. It is in very nice shape.
Price is $550.00 for the complete station. Shipping will be a problem so I will try to work with any body who is interested in this equipment.

National NC-303 in great operating condition. Front panel and knobs are
all original and in top condition. The cabinet was a mess and I had it
sand blasted and primered until the correct wrinkle paint was located.
Accent strip has been polished and new feet installed.
Radio includes correct calibrator XCU-303. Has been completely aligned
and really receives great. Added bonus is the inclusion of an original
NC-300C6 six meter converter, NC-300C2 two meter converter, and a homebrew
two meter converter. The converters work but have not been restored.
Priced at $300.00. Shipping would be difficult so I will work with any
one who is interested.

2244. FS: Drake "C" line

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-09 00:00:00 UTC
From: "Paul W. Hansen" <pwhansen@avana.net>
Message-ID: <01be545b$2a331320$LocalHost@default>
Source record: 89814
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I have a packaged "C" line I would like to send to a good home. It's beautiful stuff but I just don't have time to use it. I would like to send it all to one buyer but I will accept and save offers on each piece if no one wants the entire line. Includes cables for the transmitter and receiver.
R4-C, SN 26XXX, with 6 kHz AM filter; 1.5 kHz, 500 Hz, 250 Hz CW filters, 4-NB noise blanker. Also has extra crystals for 28.0, 24.5, 18.0, 10.0, and 1.5 MHz. Radio aligned and operates perfectly. Looks as close to new as it could. Comes with original manual and the original quality control record tag from the factory. There have been no modifications to this radio.
T4X-C, SN 30XXX, with crystals for 28.0, 24.5, 18.0, 10.0, and 1.5 MHz. It too has been completely aligned, has full output, tracks with the R4-C and looks as good as the R4-C does. Only modification is the transverter output jacks which look like they were done at the factory. Also comes with original manual and factory quality control record tag.
AC-4/MS-4, SN 55XXX. Matches the condition of the transmitter and receiver except for a couple of very minor cabinet scuffs. Comes with that factory quality control tag too.
MN-2000, SN 38XX. Operationally perfect. Front panel excellent but the case is slightly rougher. A perfectionist would refinish it but most of the rough spots are on the bottom rear edge and nothing shows from the front. Sitting in the "C" line-up it looks great!
C-4, SN 7XX. Very nice but not perfect station console. Front panel has minor nicks where inept previous owner couldn't figure out how to get the clock bezel off. They are visible but do not detract from the overall appearance. The case has some minor scuffs and scratches that could be refinished if desired but they too do not show from the front and should not be a major concern. This console does come with the power master and the remote antenna switch as well as the original manual. The clock runs on time!
The package price is $1,300.00 plus shipping from 30084, Atlanta area. The power supply will be removed from the MS-4 and the power master and antenna switch will probably have to be packaged separately.
Like I said above, I will accept and save offers on the individual pieces and go that route if I have to. Don't expect a response right away as this process may take more than a week.

I'm working on a Swan 500 for a friend trying to breath some life into this boat anchor. I don't have a shematic, but before I trouble someone for a copy I have the following questions for anyone who may know. It's a bit corroded and may be ready for the scrap yard, but we'll give it a try first.

1. Only one tube in the rig glows, it appears to be a voltage regulator (no numbers available) it's located near the bezel in front on the right hand side. Is this tube on a different circuit than the rest?

2. Can someone identify the filament pin on the back of the radio? and tell me what the filament voltage should be. If I can check this I may get the rest glowing, which might be key to getting electrons flowing :)

2249. Re: Tips for old Soldering Gun

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-09 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.990209143912.22833A-100000@Ocean.CAM.ORG>
Source record: 89819

Almost twenty five years ago, not all that long after I was given a sort of beat up Weller gun (I've done some epoxying of the case since then, and the cord really needs to be replaced), someone gave me about a two yard section of stranded wire, made up of large guage wire about the diameter of the store bought tips. It was from some high current feed, perhaps a television transmitter. I've never bought a soldering gun tip since. I just stripped the insulation, unwound some strands and cut them to size.

Admittedly I don't use the gun as much as I did in the early days, because I have less use for the high temperature, but I imagine I've saved quite a bit over the years by using the wire. I've never particularly noticed any difference from the store bought tips.

One thing someone might be interested in trying. I recently bought some copper tips that fit my soldering iron at Radio Shack where they were being cleared out for a great price. I haven't used plain copper tips in an iron in years, so it was only the price that made me buy them. I have some tinning solution for circuit boards, and decided to dip the tips in it. I cleaned the tips carefully (this is important) and then one by one let them sit in the solution for the specified time. It's hard to tell after only a few months 9and I can't remember copper tips too well anyway) but it appears to be a useful thing for the tips. Anyone using copper wire in their guns might want to try it. I doubt it's worth buying the tinning solution specifically for this, but if you've got it, give it a try.

Well the volt reg does NOT have a filament. It's showing you that at least some of the B+ voltages are working...

Best thing to do is take apart the 117X power supply. It's a pretty simple analog power supply. You should see the filament leads coming from the main power transformer.... they go directly to the wiring harness to the jones socket in back of the rig.

Since you have Volt Reg tube glowing - Power switch is working OK on the rig.

The problem is in the power supply. Don't have the schematic in front of me but I believe its 12 VAC since SWANS use 12AX7's in the mike pre-amp circuit (and a few other 12VAC filament tubes).

Everything is on a terminal strip on the bottom of the power supply - should be easy to find on a volt meter.

Good Luck -WD0HCO

Rectifier should certainly be an 80. The set should definitely be recapped (all paper tubulars and electrolytics) BEFORE you go any farther. Watch out for burned out speaker field coil. These are nice radios, but need some resoration at this point in time.

>
>If so, some of your RF is going to be wasted as heat.
>
>de Dave (G0DJA)

Yes it certainly will, about 17 times more in fact. Because
steel is ferromagnetic, the skin depth is very shallow, so
the skin resistance is a lot more than its increased DC
resistance over copper would indicate. You can also get
aluminum electric fence wire. That will have much less
loss. But it is very fragile, aluminum fatigues rapidly when
flexed, and it will quickly fail if not supported every few feet.

Copper wire has the properties we want in an antenna
wire. It isn't very expensive in the quantities we need.
So there's no good reason not to use it.

I must say that I don't understand the thinking processes
of people who think nothing of dropping over $1,000 for a
radio, but then carp about a few pennies a foot for the
antenna wire which makes the radio useful.

Want to buy a Heath HP-23* or PS-23 power supply....

Prefer late HP-23B, C, or PS-23 will pay going price for
clean unit....want one with CLEAN power xfmr, working, preferably
with vinyl covered xmfr leads....the later ones have this....
sloppy work OK, leaking can caps OK (if they haven't damaged
the transformer)....

Will accept older unit IF you'll verify that the cloth covered
XFRM leads are clean and flexible.....

Alternatively, would like to buy one or two power transformers
without rust and with vinyl or still-nice and flexible leads...
I'll build from there!!

Would take Hallicrafters supply, Tempo one, Galaxy, similar etc.....if
you have
one available....
will take Heath supply in Speaker if speaker is reasonable (paint
doesn't matter)

would consider well built homebrew if it's COMPACT!!! (I have plenty
of transformers to build a 60 pound MONSTER -- HI

Also could use some 5-10 hy 150 or so mil chokes...potted or
open, any style...

Don't really want Drake AC-4 or Swan supplies unless VERY cheap...

What ya got?

Walt WB5LJW

2271. WTB tube tranceiver PS - any type

Newsgroup: rec.radio.amateur.boatanchors

WTB-

Power supply (w/wo cabinets) for '60s-70s tube tranceiver.

Heath HP-23XXX or PS-23 with CLEAN, flexible transformer
leads (other condition unimportant if priced accordingly)

Tempo one supply
Galaxy supply
Hallicrafters supply (SR-150, 160, etc.)
Kenwood TS 900
Other???
Nice homebrew if it's NOT a BEAST -- HI :) (compact)
any condition, priced accordingly, IF power XFMR is GOOD!!

Also, HP-23 or PS-23 transformer only (one or two) and chokes
other chokes in the 5-10 hy, 150ma class (potted or open)

Will pay premium (within reason) for NICE, late HP-23B,C, or PS-23
supply....
would like others if reasonable

What ya got?

>I would like to obtain a copy of the assembly / operators manual.
>While testing the output on my scope the RF signal was skewed, making
>it look like a modulated sawtooth instead of a sine wave.
>
If I remember right, the modulating signal from an IG-102 was never too clean to begin with. It was roughly a 400 Hz tone that was there so you could signal-trace your way through the detector and audio stages of an AM RF receiver

Heath Company still sells some manuals. You might want to check out http://www.heathkit.com/.

Yep, that is way-high, for sure. The C-4 is a rare one, but they sell more commonly for 300-400. A lot of money if you ask me, anyway, and I am a Drake man (own a B-line, a TR-4, MN-4, and W-4; looking for a nice 2B/BQ). The C-4 has a clock, dummy load, remote antenna switch, and multi-function meter {no speaker, I don't think}. It is just the rarity (read: white-elephant) and the typical eBay bidding mentality.

I'd like to see eBay change its policy to permit each bidder to make *one* bid only on any given item. It would stop bid-wars and shill-bidding, and more accurately reflect both the fair market value of the item, and the conventional sealed--proxy bidding system. Nowhere else can you submit a sealed bid by proxy, then see others bids, then bid again. You can do that in a live and open auction, but eBay is neither.

Good day, all,

Recently, I have begun to learn by experience all of the wonderful things I learned by education when I was studying for my ham license. I came across a couple of old Heathkit radios and decided to restore them, but don't know enough about the hordes of different kinds of components to make rational choices about replacement parts.
The radios date from the early 60s (SB-300 and SB-400), and the parts lists contain references to several types of capacitors, many of which are not available today. I have closely perused the Mouser and Digikey catalogs, but no luck on many of these. The questions follow in no particular order:

Several of the values for caps listed are not "standard" today (e.g., 7.5, 36 and 90 pf). Should I just use the next higher value that is available? Or perhaps the next lower?

Many of the caps listed are mica. I understand that mica provides a greater temperature stability, but they are pricier than I like. One source I have says that ceramics rated NP0 will work well for temperature stability. Is that true? What are the circumstances in which you would definitely want to use mica, instead of ceramic?

What about mylar? Polypropelene? Tantalum? What applications would these be best suited for?

What is the meaning of the various temperature coefficient ratings (NP0, Z5U, etc.)

The same question regarding EIA Class I, II, and III?

Trimmer caps - are these just adjustable capacitors?

Snubbers?

In power supply applications, I have seen some schematics that use monster electrolytic filter caps - 20K mf. The radios I am working on use 20 mf. What is the purpose of using such huge ratings? Is it just a better filter?

I would very much appreciate any responses that would help me to understand the nature of these beasties a bit better.

Thanks!

Adam Adkins, KM5SS

2300. Wanted: UK: a copy of the Yaesu FT401B manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-10 00:00:00 UTC
From: andrew@phicom.dungeon.com
Message-ID: <79qkcn$9vt$1@news1.cableinet.co.uk>
Source record: 89751

I have bought an FT401B txcvr but it came with a copy of the FTdx401 manual. I think there are some small differences (not least the AM the B has and the '01 doesn't) and I need to give the radio a tweak.

Also, does anyone know if these were ever shipped with 160m ? The architecture is the same as an FT101 as far as I can tell and so it is possible I think. Mine is 80-10 with JJY/WWV and 2 AUX positions.

If anyone out there could send me a copy of the manual I would greatly apreciate it and would refund postage etc.

Also if there are any 401 fans out there please drop me a line. I'm thinking of replacing the 6KD6s with EL509/6KG6s BTW.

2302. FS: Drake TR-4/AC-4/MS-4 (price reduced)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-10 00:00:00 UTC
From: kd5gch@usa.net.NOSPAM
Message-ID: <WSdw2.6822$OS5.7779018@news3.mia>
Source record: 89753

After looking around the web, I realized I was asking a bit too much for these
units. I think a fair price is $200 + shipping.

Drake TR-4 Transceiver + AC-4 Power Supply + MS-4 Speaker

Comes with original manual, and cables.

Very good cosmetic condition -- this rig is older than me.
Top of TR-4 case has scuff marks in the paint and two small
dents from the feet of the MS-4/AC-4 that rests on top of it.

Front panel on TR-4 is in excellent condition, and all knobs
work and are present.

Powers up fine, all tubes light up. I have not tested the
tx/rx abilities, and I am sure it needs to be aligned and such.
Because it is so old, and I have no way of knowing how well it
works, the units are sold as is.

$200 + you pay shipping from Baton Rouge, LA 70808
(I will ship it any way you like, as long as you cover shipping costs)
Will ship same day money order is received, or wait 5 days for your
personal check to clear.

To be sold as one package, I would rather not separate the units.

Email if interested.
kd5gch@usa.net

Peace and 73

Come 2000,
I know some people think that the folks at the electric
company are just going to shut their doors, go live
in the trees and eat grubs with the rest of us.
I personally think some people are making money
and noteriety for themselves.

Here's an article you'll find interesting:

http://www.wired.com/news/print_version/culture/story/17193.html?wnpg=all

Good thing our boatanchor tube electronics are "2K Compliant" ;-).
Jesus is going to come at midnight* and the EMP from all those
angels blowing horns and shining all bright and stuff will blow out
them YeaComWoodies. Try to buy MY Johnson Ranger
with your silver coins! Humph! Go eat grass.

A big red comet will slam into us at the same time, followed
by an green, slimy asteroid infected with a new, alien-created
strain of AIDS that will wipe-out European white males
who eat pie for breakfast.
And the world is hollow and filled with a giant UFO base.
They're going to turn the Earth inside-out at midnight 2000
and make us live in the dark for a change.

Hey... all these folks made money saying this stuff.
It's my turn!

(snicker)
Dave Stinson AB5S

Anyone know what kind of radios the Army Signal Corps was using on
Peleliu during and after the capture of that island in the fall of 1944.

I am trying to recreate a setup for a (then) 20-year old signal corps
(81st Signal Company to be exact) radio operator's 75th birthday.

I am in touch with the Signal Corps Museum already, but the boat anchor
crowd seems to be a perfect place to get the straight answer.

Thanks,

Steve Swift

Hi! Is it relatively painless to install a PL board in a Midland 13-509? I have a ComSpec board that I would like to put it. I'm lacking docs, so any info would be helpful.

Are there any other upgrades of interest with this rig? I found an old article in "73 Magazine" about improving the squelch performance, but that's it. Has anyone ever changed out the finals to get more than 10W out (like is commonly done with the HR-2510/2600)?

Thanks for any help -

Paul WD8DKY

Interesting reading and the links are marked for future
sifting. "Experts" are dropping in all over the landscape on
y2k.

I no more believe all -or even much- of Gary North's or Ed
Yourdon's takes on Y2K than I believe every word posted on
r.r.a.p. What I find compelling is all the questions raised,
and not just by this pair, that have not been addressed, and
certainly have not answered.

It has become pretty clear that today, technologically
informed persons can do unpleasant things to you personally,
based on your various identifying numbers, that you will not
even be aware of, and cetainly wouldn't condone. That's
"progress". Need an example?

Not long ago I noticed a $60 charge on a credit card
billing-one that I had not authorized. It was from a mail
order company that I had purchased several electronic items
from over the past several years. The charge was for a
"service" that I had accepted over a year previously as
"free", something to do with vacations. The employee had
emphasized there was "no charge", and hadn't even asked for
any payment, and I had not given any credit card
information. I didn't want it but she was insistant that I
accept it as "free", no obligation.
BUT-the company already had my credit card information on
file from my purchases, and evidently the nice sounding
young lady,-or someone else in the company-, had decided to

bill me for "renewing" the "service" without even contacting me. Did they think I wouldn't notice? How many people would have failed to spot this charge, expecially those who are heavy credit card users? How many times do they get away with this? Of course one very pointed phone call resolved it. How many times are these charges just paid without the individual noticing? Another digital rendition of the almighty dollar chase at work.

Should we presume that there is "no problem" with the Y2K bug just because the fringe has blown it out of all logical proportion and against reason? It seems clear that there IS a problem, and that ignorance and economic conservatism has forestalled a timely solution on very many fronts.
Executives apparemntly didn't want to hear about it since it was going to cose lots of money to fix and was no immediate threat. Since the extent of the problem cannot be determined until after it makes itself apparent, personal caution would seem to be the order of the day.

When a glitch in the Hong Kong or Brazilian stock markets results in a major drop (temporary, this time) in ours, does that build confidence in the ability or determination of the third world to fix their part of it? Who knows how much they matter today in the overall scheme?
Who's betting what on The Next Time?

To all BA,

A group of collector-historians has recently formed the Tube Collectors Association. This is in response to the need for a focused group dedicated to the growing activity of collecting radio/wireless tubes and to sharing historical insight about them. As a tube enthusiast, you'll probably be interested in this development, and may want to help guide the activities of the group from the start.

Source record: 89700

Bendix Radio Aircraft transmitter, model TA-12D, for sale. The serial number is C1-94. I know very little about this unit. I have pulled the case. It appears the to use a pair of 807s as an RF power RF driven by a single 807. The bottom row of jacks (I.P.A.P, P.A.P., Local-Rem and Key) has been ï¿½cannibalizedï¿½ (removed). The wiring harness is unharmed except where the run to these four jacks was cut. It would appear to be a simple matter to install replacements. However, without a schematic, I cannot be sure what the exact replacement would be. Apart from these missing items, the radio appears to be in good condition. The front panel no scratches or dings. The R.F. Ammeter seems to be good condition. The case is in good shape! Printed on top of the cabinet is a crown with a large letter A and M on either side of it. Immediate below this is Ref. No. 110-D-40. I offer this set for sale for $40 with you paying UPS shipping and insurance from Oklahoma City.

Yes, the RAL-8 is, in indeed a boatanchor. It tunes 300KHz to 20MHz. Was used on various ships and submarines in conjunction with it's brother the RAK that covers 16KHz to about 600KHz. These receivers probably represent the high-water mark of regenerative receiver design. Truly impressive performance fo a first cousin to a Knight Ocean Hopper.

2346. Capacitor questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-11 00:00:00 UTC
From: staylor@lucent.COM
Message-ID: <453B16902112D211AAC400805F9FE7D3614CB9@NJ0117EXCH003U>
Source record: 89709

I guess that what you are confronting as to finding parts is why restoration of old gear can be a challenge or in some cases more expensive than buying new if you have to replace a lot of parts which are expensive and no longer manufactured.

In most power supply applications the electrolytic caps were usually rated at
(-20/+80) value tolerance. The nominal value is not that critical. E.g., you can likely use a 20 or 25 uf capacitor in place of a 30 mf. Most important is the voltage rating. Use a value at least as high as the original unless you know that your substitute meets the working voltage in the circuit. Sometimes equipment designers used a 450 VDC part when a 350 VDC part will work because they had 450 volt units in stock.

Newark electronics (http://www.newark.com) stocks (in their 1700 page catalog) axial lead electrolytics up to 600 VDC at 20 uf (Sprague TVA1966) . These puppies go for about $20.00 (new stock). Trying to find them in the old style aluminum cans is near to impossible. New old stock units that have been lying around for many years may be in worse shape than the caps in your radio. The electrolytic coating can be restored in NOS parts, by gradually bringing up the voltage from a bench supply on these problem parts, and let them "cook" for a few hours while slowly raising the voltage to rated value. Believe me, this is why people who restore these rigs ask so much $$$ for them, because it takes a considerable amount of time and effort to do this. Sometimes, what is done is to take an old rig, don't power it up on full line voltage, especially if it has been lying around for years. Then power it up with a Variac or eqiv. over a several hour period, just to gradually raise the line voltage. This will have the effect of gradually re-coating the electrolytics so they don't have to be replaced. Once this is done, and the gear is in use, there's no problem.

Also, check hamfests for parts, but beware, some electrolytics, even new ones that are old, could be bad.

Ceramic caps will sometimes work as a substitute for a silver mica if it is in a low level/low power point. Interstage coupling caps can be Z5U or X7R rated (X7R is supposed to be more constant value with temperature. Z5U caps (if you look at the EIA temperature curves) are mostly useful for bypassing only, although some hams use them for everything. Again watch the voltage ratings.

So called paper, Mylar or plastic (polystyrene) caps have a poor dissipation factor for RF applications, so I would only use them in audio or low frequency stages. Tantalum caps are OK to substitute for electrolytics if the voltage rating is at least as much as the original part. Tantalum caps rarely ever go bad. That's why they cost more.

I restored a TMC GPR-90 receiver a few years ago. I found more than half of the silver mica caps were bad. Either the values were way off or they were like an open circuit. All the other caps were OK. I would not just replace parts just to replace them unless you know they are bad.

Hope this helps.

2350. Re: Collins filter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-11 00:00:00 UTC
From: chris@pooh.cc.ucf.edu
Message-ID: <79v87j$fq0$1@news.cc.ucf.edu>
Source record: 89713

Here are the Collins filters that I have.

1 - 526 9380 000 F455Q7 - 9 pin plug in - new

2 - 526 9897 010 455kc USB 2.1khz bw - rectangular,
blue plastic plug-in - new
2 - 526 9939 010 455kc LSB 2.1khz bw - rectangular,
blue plastic plug-in - new

Below are used - pulled

1 - 526 9160 009 F455N40 - Cylindrical with mounting tabs
1 - 526 9161 009 F455N80 - Cylindrical with mounting tabs
1 - 526 9162 009 F455N160 - Cylindrical with mounting tabs
3 - 526 9162 009 F4555350 - Cylindrical with mounting tabs

The new filters I would like to get $40.00 for
and the used ones $10.00. I do not know or rather remember
where I got these from. I think it was the local surplus
store here in Orlando.

I have checked them all with a signal generator and scope
and all appear to be functional. The F4555350 are very
wide bw filters, but do not remember what the bw actually
was.

Hope this helps.

2352. FS: MB-II tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-11 00:00:00 UTC
From: "Paul W. Hansen" <pwhansen@avana.net>
Message-ID: <01be55f1$dbca4c60$5969e5ce@default>
Source record: 89715
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Older high power tuner. Operationally perfect and the front panel, knobs, and meter are excellent. Housing was constructed from aluminum and was inadequately prepared at the factory. The hammertone gray paint is peeling from the case. Strip it, prime it, and paint it for a very nice tuner.

$175.00 plus shipping from Atlanta.

> CKB-74028
Not enough information to tell.
More information on the name plate?

> TU-26-B (GE)
> TU-6-B (transmitter tuning unit) Magnavox
Both are transmiter tuning units that fit the
BC-191 and BC-375 WW-II Liason transmitters.

> CMX-46156-1 (A UNIT OF MODEL RAL-8 RADIO EQUIPMENT) Magnovox
> CMX-20131-1 (rectifier power unit)
Part of the RAL/RAK WW-II receiving set.
Very desireable by collectors, but not real valuable
money-wise because of size and shipping costs.
Needed in many WW-II ship restorations.

> 4 RADIO MOUNTS
Not enough information to tell anything.
Nomenclatures? Name plates?

Try http://www.surplussales.com as well as Dan's Small Parts,
http://www.fix.net/dans.html.

> Several of the values for caps listed are not "standard" today
> (e.g., 7.5, 36 and 90 pf). Should I just use the next higher value that
> is available? Or perhaps the next lower?

Depends on the function in the circuit. If they're used in a resonant
circuit, you'll change the tuning of the
circuit if you change the value of the cap. If they're used for coupling,
changing the value a little bit may or may not be bad, depending on the
design. If they're used for bypassing, the values can be broadly substituted.
Many people here know more about this than me, and will hopefully chime in.

In any case, these sorts of caps are unlikely to have failed and you should
definitely not replace them unless you've got a specific reason to do so.

> Many of the caps listed are mica. I understand that mica provides
> a greater temperature stability, but they are pricier than I like. One
> source I have says that ceramics rated NP0 will work well for temperature
> stability. Is that true? What are the circumstances in which you would
> definitely want to use mica, instead of ceramic?

NP0 is a type of ceramic material that exhibits a very tiny amount of drift
with temperature. They are in general superior to silver micas in resonant
circuits. Silver micas supposedly aren't good under large DC biases -- the
silver migrates through the dielectric, or so I've read. Again, see comments
above about not touching unless blah blah blah...

> What about mylar? Polypropelene? Tantalum? What applications
> would these be best suited for?

buy a copy of _The Art of Electronics_ by Horowitz and Hill. They discuss
capacitor types at length. An excellent and readable book. The accompanying
lab manual is excellent, too. amazon has both of these.

I think Barnes and Noble had a sale on _Art_ recently.

Also, Terman's _Radio and Electronic Engineering_ (you can find copies at
www.mxbf.com) is very good
and covers material in a way more modern texts do not. 4th edition
preferable.

> What is the meaning of the various temperature coefficient ratings
> (NP0, Z5U, etc.)
>
> The same question regarding EIA Class I, II, and III?

can't answer these; you can probably find via a dedicated enough web search.
try www.dejanews.com to search back through newsgroup postings.

> Trimmer caps - are these just adjustable capacitors?

yes -> trimmer implies a variable that's intended to be set once and left;
usually physically small, and having a
fairly limited range and small capacitance, as general guidelines.

> Snubbers?

I think these are RC networks packaged as a single unit, intended to absorb
energy created by opening the circuit through a large inductive load. But I
could be wrong.

> In power supply applications, I have seen some schematics that use
> monster electrolytic filter caps - 20K mf. The radios I am working on
> use 20 mf. What is the purpose of using such huge ratings? Is it just a
> better filter?

I think so, but there may be more to it than that; perhaps larger caps store
more energy -> can deal better with
smoothing out ripple when large current flows are involved. Are these
schematics for high-current DC supplies for solid state amps or transceivers?

> I would very much appreciate any responses that would help me to
> understand the nature of these beasties a bit better.

OK, here's some general advice:

You aren't planning on replacing all the caps in these things, are you? I
think that that would be a bad idea.
Only the electrolytics are at all likely to fail, and in my experience not all
that likely (I have some very old tube radios still running on original
electrolytics).

You should try to diagnose any problems and resolve them as surgically as
possible.

One thing that *can* happen to old electrolytics is depolarization, which can
lead to failure when power is later applied. Depolarization happens when the
set's been sitting unused for a long period of time. You can avoid this by
re-forming the dielectric -- get a variac, a variable autotransformer (see

www.surplussales.com or preferably (much more cheaply) your local hamfest) that allows you to control the voltage applied to a device. Start off with the variac set to some very low voltage, say less than 10 VAC, and slowly advance it, allowing the device to sit for some significant period of time at each new voltage, up to 110V. How long? I've heard people say 20 minutes; others say at least an hour. I've no idea what the "correct" amount of time is; hopefully here someone with more hands on experience will chime in... but slow and steady is better than plugging the thing into the wall and turning it on.

Particularly, the notion of replacing silver micas and suchlike, which you seem to be hinting at, is asking for trouble. These are very reliable components and you should only replace one if you've got good evidence it's failed. Throwing the tuning off on the interstage coupling xformers in a superhet receiver, for instance, will lead to a bunch of work that ain't easy to do even with the right equipment unless you're experienced.

2360. Help:Russian BA's

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-11 00:00:00 UTC
From: Steve Pazar <zarco@sonic.net>
Message-ID: <36C35A94.1DE6@sonic.net>
Source record: 89723

Hi Gang,
Just picked up some really cool Russian boatanchors. Gulf War vintage.
Wondering if anyone has any info and/or manuals (I know, fat chance!).

The older set of the two has a tag that says "R-123M". It is mostly
solid state with tube finals (at least). Seperate solid state power
supply. It is an FM tranceiver, 20 - 50 MHz continuous tune, or one
of 4 preset freqs.. Built like a tank (which is what I believe it
is out of). Runs off of 26 VDC, and the receiver works. Haven't
tried TX yet.

The newer set is more interesting. Appears to be a newer version of
the set I mentioned above. Same freq range, FM, but *synthesized*!
Does not use an external supply, but runs off of 26 VDC directly.
All solid state with monster heatsinks/transistors on each end of
chassis. This is also a tranceiver. Designation: Radio Set 889.
I do not see as much text on this unit, so not really sure if
it is Russian, but some of the cables are interchangable with the
R-123M, which has lots of Russian characters on it. Both sets have
most operational knobs/dials marked in English! Export version?!

I have yet to dig through all of the cables/interconnect boxes I
got with these, and may have extras if anyone out there needs them.

Steve

Wanted:
Gutsy ham-radio lawyer who wants to win BIG!

Jurys are awarding MILLION$ to people for willingly huffing cigarette
smoke.
They just awarded to the tune of 4 MEGS against gun makers
because punks used their guns to kill each other!

Look-- It's obvious now that people will do ANYTHING to be
relieved of their responsibility for their own actions.
What a chance to score some MAJOR bucks!

I've been victimized over the years in ham radio.
I can't win contests. My signal is never louder then
anyone elses. My family gives me grief over the radio.
This is "pain and suffering," right?
Icom, Drake, Yeasu, Kenwood...they built the rigs!
It's all THEIR fault. They added all those nice
features when they KNEW it would force me to
buy and use them!

Hey... here's a better one. These guys got more money.
I'm fat. It cost me lots in medical bills, pain and suffering,
social degradation, etc. Let's go after McDonalds! Burger King!
Hey, they didn't put any disclaimers on their burger wrappers telling
me that if I eat this stuff I'd get clogged arteries! Their
commercials on the tube FORCED me to over-eat!
Let's rake little miss Wendy over the coals;
she's gotta be worth a few mill in judgements.

Why stop there? Go after the big farmers! They raise the hogs
that make all that pork sausage, right? Look out, Jimmie Dean!
You didn't tell me your pork would give me thunder thighs.
It's not my fault. Your deceptive advertising and all those
bright packages hypnotized me. I'm a victim of big-money
food companies. They added cream, milk and other fats
to ice cream when they KNEW that it causes fatty deposits!
Don't deny it! When you put seasoning in hot dogs
you were fully aware that it would FORCE people to eat more
of them. Think of all the french fries...
Why, we'll own the state of Idaho even after the appeal.

Say... this could be bigger then I thought. I walked out
in the rain last week without a hat and got a cold.
God made virus bugs.... Wow.... The possiblities!

Here's to a world without personal responsibility!
As long as someone doesn't blame ME...

2368. FS: Western Electric NOS Shielded Twinax switchboard wire!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-12 00:00:00 UTC
From: OPCOM <vaxhackery@worldnet.att.net>
Message-ID: <36C3774C.BD13E949@worldnet.att.net>
Source record: 89631
Cross-posted to: rec.audio.tubes,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

This beautiful vintage wire is composed of two 22 guage conductors, one with white colored insulation and one with orange, intertwined within a paper sheath, residing inside a very heavily woven shield, in turn surrounded by another paper sheath, and this is then covered by a very durable and flexible yet thickly woven cotton covering of a light grey-pink color. This wire is of the utmost in quality, and perfect for stringent instrumentation or tube audio requirements. I'm not sure how many feet are on the spool, but as you can see, it is full. 200 feet maybe? Don't hold me to that, it's just a guess. The spool itself is extremely nice on the top, but does have some slight scuffing and a little surface oxidation on the bottom, as shown in the pictures. I have not seen a nicer 45 year old spool of wire anywhere.

Hello everyone,

I still have a large lot of vintage electronic items for sale. I have added some new items to the list and have lowered the asking price.

New asking price: $200 for the entire lot. Pickup only in Davis, CA (between the San Francisco Bay area and Sacramento)

Added Items:

box of large and medium ST (shoulder style) tubes. Assortment of types. Size of box is 18" X 12" X 12" and is stuffed full.

box of about 200 miniature tubes. assorted types. many from vintage car radios. Some NIB. Many hi-fi preamp tubes and radio detector types.

Original Items:

Panoramic RF spectrum analyzer 10MHz-44GHz Model SPA-4a (c.1970). functional.
RF signal generator- lab quality 50-400 MHz w/FM modulator. works.
HP 400C decibel meter
Field Geiger counter
Old military aircraft receiver
military radio headsets (Western Electric/SIGNAL CORPS)
large air variable capacitors for old AM radios and transmitters
Original ScanVertiser LED moving sign display (big)
Old 275 Watt 12VDC-117VAC inverter
B&K Precision television IF analyzer
HP laptop computer
6 big spools of antique radio hookup wire, assorted colors, good condition
new small 19" rack cabinet
new 19" rack faceplate
Giant sodium vapor lamp
Antenna mounting hardware
1939 Buick car radio and speaker/power inverter
Vintage miniature reel tape recorder
Computer grade electrolytic caps
Giant blade fuses
Vacuum tubes
HF marine radio, works
AM transmitter chassis (National Radio)
Large air inductors for old AM transmitters
Audio cables
Assorted semiconductors
VHS VCR (probably works)
Old 3" CRT

Accordian (needs work)
Old meters and switches on a control panel
Touch tone decoder unit

And more rare and educational artifacts. Buyer must take entire lot.

LOCATION: Davis, CA (between Sacramento and the San Francisco Bay)

Please call Mark at 530-753-4837 any time or else reply via e-mail to:
mwchang@engr.ucdavis.edu

Best wishes,
Mark Chang KI6ZQ

Hi all,

Picked up this monster today with an junker Crosley TV chasis; the owner of the shop insisted that it was part of the TV :-o. Here's the specifics:

Reliance Electric and Engineering Co. - RL6989Ne
8 inches long, 2 inch diameter !
Cap on top; 4 pins from base terminated in large spades
Ceramic base w/ metal band

What is this? A thyratron? What is its application? Looks used, but some getter remains; worth anything to anybody, or is it just a neat display item? Figured somebody out there would know.....

Kevin McDonald

Source record: 89644

I have some broadcast consoles for sale. may need minor work...some may not.
have pic's available of each, just ask..
will be pick up only preferred on most due to size...
all are mono....at least 5 channels one with 8 channels...
sparta $125, qrk $200, and gates (8 channel tube type unit)
w/ power supply....$250
also have some (mono) cart machines...$75 each
audimax III ALC, audimax 4440 ALC, volumax 400 APC....all rack units
$150 each

Also have gates BC500T xmitter, it is now set for 1480KC is 500 watts.
was the old back up unit that was no longer needed...
uses 3 833A's, virtually (may be missing minor stuff, ain't they always)
a complete unit. have all tubes for it.
meters, 2 of the 4 meters need new glass in them. cabinet in
nice shape. inside will need the usual 'dusting' out...
i also have the schematic for this unit...
would make a great 160 meter rig for those who like that.
sorry, this would be a pick-up only unit....in Jackson, Mich. 49202.
email me if interested, or call at 517-789-8702...if you get no answer
i may be on the internet (only one line here for now.)
asking $400

eBay exists for the benefit of the seller. The seller's price reflects eBay's commission. I doubt they will change their policy just because folks don't like the high prices commanded
by some items. Bid wars are part of the game, if you don't like them, don't use eBay. It's that simple.

Pete
r
I'd like to see eBay change its policy to permit each bidder to make *one* bid only on any given item. It would stop bid-wars and shill-bidding, and more accurately reflect both the fair market value of the item, and the conventional sealed--proxy bidding system. Nowhere else can you submit a sealed bid by proxy, then see others bids, then bid again. You can do that in a live and open auction, but eBay is neither.

scroll down to the 'prices realized' link.

I realize there is some controversy about the seemingly high prices some

things go for on ebay but the more buyers there are, the higher the
price.
Thats called supply and demand. If the Mona Lisa was sold at a
neighborhood
garage sale I doubt it would bring the several millions of dollars that
are its
true market value.

I have also updated my popular links page by adding over 300 new

I have a nice SX-111 for sale. This receiver features 80-10 meters,
notch filter, dual conversion and crystal filter. Cabinet was
pro-finished, power cord replaced with three conductor heavy duty, it
has the built in crystal calibrator,
everything works great. Two knobs are incorrect. $145+shipping

For sale or trade:

Heathkit SB-401 transmitter.
In very good condition, both operational and cosmetically.

I operated the radio this weekend on MidCars (7258 Kc) and CW on 80 Meters.
The output on 80 and 40 is about 140 Watts on CW into a 50 Ohm load.

There is one small nick on the front panel, near the band switch.
There is a small paint chip on the front panel, near the LEVEL control.

I have the manual. No microphone.

asking $175
or I would like to tade it toward a SB-102 transceiver.

PLEASE contact me VIA email since I don't check the news group daily.

We need a simple 50-100 watt CW tube transmitter to be modified and used in a scientific experiment.

We are looking for tube equipment because of robustness, and we need a decent amont of free space inside to install our modifications (we will be using it as a broad band pulse amplifier).

It does not need a VFO / synthesizer, modulation of any type (other than CW (grin)), or any frills, but it must produce RF power. An old xtal controlled Viking Navagator or anything similar would be fine.

>Why are you so ticked?

He is so ticked because $500 IS a ridiculously high price to ask for a
Viking II - "free market" or not. Anyone who asks such a price is a dealer
looking for suckers . The market price of items is artificially inflated
beyond normal bounds and free market dynamics take months , sometimes years
to self-correct the situation. In the mean time, gear goes unsold and
unpurchased.

Remember, in your "free market", we DO have the right to "talk to the store
manager" (seller) about price policies - not just be meek and quiet and look
for something less expensive. Free market conditions involve both sides.

I need any help you can supply about the above set.
I believe it's from the 50's. A domestic broadcast receiver
in a brown Bakelite cabinet 18"x14"x12" 250v ac. The back
panel is missing so there are several sockets I need to know
the purpose of. I suspect one valve to be dud as the top cap is
loose, DH63M. Speaker cloth requires replacing and it has a
couple of broken knobs, somehow I must get a photo onto the
Ng's. Does anyone know if Radio Bygones have ever featured
this receiver ? The audio side sounds like it works but nothing
from any of the wavebands.

That's true, Ron, but we DON'T have the right to go bitching out loud
to other customers in the store or, more to the point, to a public
newsgroup. It is foolish to complain to the group that someone asked
a high price - just go to the "store manager," i.e., the seller, and
tell HIM. That is certainly OK, and part of the bargaining process.

I cannot believe how many people find that the word NO is difficult to
say.

2421. WTT 520SE station for Drake gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-13 00:00:00 UTC
From: ekugrad@mindspring.com
Message-ID: <36c5a6b9.4815833@news.mindspring.com>
Source record: 89596
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace

I have a complete Kenwood TS-520SE staion, that I would like to trade for Drake Equipment. I am interested in the following trades:

C-Line, B-Line, TR4CW with RV4C, or L4B. Equipment must be in Very Good condition. No project radios.

The station consists of the following:

1. TS-520SE Very Good condition Has the CW filter installed. 110 watts on 80 meters. Works great on all bands 160-10 (no warc). This is a great rig. No scratches or dings.

2. VFO-520S Remote VFO. Very Good Condition. Comes with interconect cable. Small scratch (size of a BB) on left corner of front bezel.

3. SP-520 Speaker. Very Good Condition. No scratches or dings

4. AT-200 Antenna Tuner/SWR/Power meter. Very Good Condition No scratches or dings.

5. MC-50 Mic. Excellent condition

I have original manuals for everything except the AT-200, which I have a good copy of. No boxes for anything except the MC-50. This is a great station and a lot of fun to operate. This station is in line now, and running great. I can set up sked if you want to hear it on the air.

What do you have to trade?

2425. Problem with Drake L7 .. help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-13 00:00:00 UTC
From: amfone@concentric.net
Message-ID: <7a4mgd$s9d$1@nnrp1.dejanews.com>
Source record: 89600

Well my 20 year old Drake L7 finally bit the dust.. hope Drake will still work on it , I'll call them monday.

But if anyone has any ideas please let me know.

Here is the problem.. the amp will not key up when using the T4xc.. all the wires connecting cables have been checked..I did open the amp and clean the relay but no luck...the T4XC is not the problem ..

Now interesting enough .. when you key the xmitter by talking into the mic..the plate meter will then rise and stay at the normal operating value .. sometimes not always..

If you drive the amp.. with additional rf from the xmitter , it will then key the amp ... in other words... if " extra " power is sent to the amp either via talking into the mic or via the rf gain control the amp will key.

Now of course the L7 like my L4B should key and show idle plate current with no drive and no grid current..

So for some darn reason my L7 is not working..

any accurate info much appreciated...

Wait a minute... I can't complain on a public newsgroup about
high prices.. but according to you Wayne its ok for the sellers
and dealers to advertise their gear and there prices.. Hey I want
the same fair treatment.. I have a right to post any message I want
about the price of something, or if you disagree .. then lets stop
all the posting of goods for sale and for auction.. etc.....

And Wayne what world are living in when customers must complain only
to the store manager about the price of something... have you purchased ANY
consumer electronics lately , how about a car..complaining about the
price of a product goes on all the time and not just to the manager
but to the sales person and in public... give us all a break..
You dealers have to accept that if you ask a stupid price ... those of

us who think its stupid... have the right to say so .. ON THIS OPEN PUBLIC FORUM.... IT MAY SAVE SOME POOR CHUMP FROM GETTING BURNED...

LATER
TIM

Hello all
Picked up an interesting rig at a flea market today. It had Harvey Radio dials and meters on it and looked commercial but after checking the Moores book, I cannot find anything like it. Maybe someone can help, or if it is home brew (a good possibility) point me towards some schematics. It has a plate with W1JPL (SK) on it

It is in a steel cabinet about 2 feet tall, no power supply.

The exciter has a 6V6 and a 6L6 with two plug in coils. It looks as if they are band switched. A Harvey 0-100 ma meter in center and several Harvey dial plates. also has two of the nice old Johnson 180 degree arc dial plates.

It also has what seems to be an amplifier on a separate chassis, a single 809 with a battery bias supply. It has a 0-200 "Harvey" meter and vanilla 0-50 meter .

As I said no power supply and both units have several unidentified sockets in the rear

I'd like to get this going, even if I just use the available parts. Anyone have any ideas or schematics s or info for this tube line up ? I've checked my limited 1930's and 40's QSTs. with no luck. I wonder if this was a handbook rig ?

You obviously didn't read the original post, in which the fellow said he issued a "want" for a particular piece of gear. To the best of my knowledge, the responding offer was made to him via personal E-mail (I sure never saw it here, or on any of the other NGs where trading goes on).

I agree with you to some extent - if someone publicly advertises a piece of gear at an exorbitant price, we need to let him (her??) know publicly that he (she??) is full of c**p). But, private responses to a request don't fit this mold. If you ask me to sell something, I can set any price I choose, and you have every right to JUST SAY NO!

Our original poster was just pissed that he didn't obtain a response that fit his definition of a fair price, and had to share his annoyance with the rest of the world. TS!

Sorry Wayne, he does have the right to, as you say, "to go bitching out loud to other customers in the store or, more to the point, to a public newsgroup." It's called freedom of speech. Note, he did not name the person, so slander or libel do not apply.

If you disagree, fine. But don't confuse it with someone's rights.

Hell, Consumer Reports talks about prices all the time.

That's true, Ron, but we DON'T have the right to go bitching out loud to other customers in the store or, more to the point, to a public newsgroup. It is foolish to complain to the group that someone asked a high price - just go to the "store manager," i.e., the seller, and tell HIM. That is certainly OK, and part of the bargaining process.

I cannot believe how many people find that the word NO is difficult to say.

Hi guys...
I badly need two PL-154 12-pin "openloom" plugs. I discovered the
two 12-pin plugs I have are the wrong pin "footprint" while building
the harnesses. These will be for the harness that goes from the
modulator to the transmitter rack.
I am in such need of these connectors that I am offering my
National NC-173 for trade. It looks good, works fine, has the original
speaker and a mint owners manual.
Anybody interested?

2446. FS: BROADCAST EQUIPMENT UPDATE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-13 00:00:00 UTC
From: hammarlund@acd.net
Message-ID: <36c70768.162496223@news.acd.net>
Source record: 89621

Need to move this stuff or at least a portion of it this weekend.
so if you are close enough to Jackson, Michigan...let me know, as i need
(especially the xmitter) the room...can email pic's of most everything listed.

I have some broadcast equipment for sale. may need minor work...or may not.
will be pick up only due to size of equipment...

Consoles: all are mono....
Sparta 5 channel $50, *missing 2 pots and jack from front panel not the main
panel.
*(headset volume & monitor volume & jack)no p/s,
QRK 5 channel appears complete inside and out- $150 no p/s,
Gates tube 'Yard' 8 channel w/ power supply....$250

cart machines...$75 each
Carts available for above...$4.00 each with purchase of machine...

Audimax III ALC, Audimax 4440 ALC, Volumax 400 APC....all rack units
$100 each

Gates BC500T xmitter, it is now set for 1480KC is 500 watts.
was the old back up unit that was no longer needed...
uses 3 833A's, virtually (may be missing minor stuff, ain't they always)
a complete unit, all the major stuff is there. I have all tubes for it.
2 of the 4 meters need new glass in them. cabinet in average shape.
inside will need the usual 'dusting' out...
I also have the schematic for this unit...
would make a great 160 meter rig for those who like that.
sorry, this is a pick-up only unit....in Jackson, Mich. 49202. $400

I also have the matching phaser for the above, it, I believe is Not all there,
but then i have never seen the insides of this type unit before either..

email me if interested in any of the above, or call at 517-789-8702...
if you get no answer I may be on the internet
(only one line here for now and don't know how to disable call waiting.)email
me..

I had many who wanted the xmitter, but so far nobody has showed up yet...
thanks for reading this post...
Robert

From: w8pu <w8pu@your-net.com>
Message-ID: <36C646EB.BF0FD8FF@your-net.com>
Source record: 89627

I don't care if someone wants to complain about the higher prices asked for old gear. What I do hate are 20 messages arguing the pros and cons of the original post. Who wants to pay $500 for a Viking II to have the mod transformer burn up a week later?? Eventually the older gear will loose it's appeal again or finally bite the dust for good. Then everyone can go back to Amway and pyramid schemes to rip off suckers. Wanye those of us that are wise enough won't buy at an inflated price so back off of the sell pitches.

Gary

2457. $500.00 for a Viking II !!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-13 00:00:00 UTC
From: amfone@concentric.net
Message-ID: <7a2mej$ak5$1@nnrp1.dejanews.com>
Source record: 89671

I put a post out looking for a older American made am ham gear.
A message came back offering a Viking II for the " fair " price of
$500.00 plus shipping !!!
This internet sure has its problems... to many dealers just trying to
make a buck ...

A good operational Viking II in not worth anything near $500.00 to me
nor have I ever heard of one selling for anything close to $500.00. Which
indicates that its not worth that much to anyone else either. A Viking II
will sell for about $100.00 to $125.00.. but not $500.00!!!

We should start a newgroup for non-dealers only.. and get away from the
profit seeking , Ebay crap.....

Ah that felt good...
Anyone else agree with me ?

NO!! You were OFFERED the opportunity to purchase the rig at the
buyer's price. You were able to say no, weren't you? All this BS
about price gouging is just that - BS. A totally free market sets the
prices, and if you don't want to participate, just say no!

2468. Accessory crystals for Drake B-line

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-14 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <36C73963.58D63D45@asu.uswest.net>
Source record: 89483

I got a R4-B last week, and now I need to find crystals to fill up the vacant slots. The manaula says to "use only series resonant crystals" but does not specify whether they should be fundamental, or overtone type. Which is it, or does it matter?

The manual also forbids 5 to 6 MC operation, presumably because the VFO falls in that range. Can I "get away" with using a crystal for 5950--6200 KC (the 49M SWBC band)?

Lastly, I need to find a retail source where I can buy crystals. Can someone suggest a source that balances quality/price fairly well? What can I expect to pay per crystal? Thanks.

Hi Tony,

Thanks for your interest. No, the auction hasn't ended, I had to cancel
it. We had posted the ARC-5's as one lot and I received five angry emails
from people complaining it's too big. All the equipment is still available
and we plan to break it into smaller lots and repost.

If you would like to send this message out to the newsgroup or other
mailing lists, please do. The list is at http://w6yx.stanford.edu/sale/
and I'll be adding pictures soon as I can get a digital camera up
to the shack (hopefully by tomorrow).

73,
Manish, ke6zpm.

Message-ID: <12801-36C768A9-78@newsd-122.bryant.webtv.net>
Source record: 89497

I had a 68 without the "A"

Not really sure cuz its a long while back, but it could be that the
final ran "straight thru" on 6 meters, whereas on the AF68, the signal
doubled in the final, resulting in about half the output, and
potentially increasing the spurious output.

Either way, don't junk it, because it is a solid basic rig.

If the rig runs, you could easily verify (or reject) my memory.

Tim,

..with all due respect, DON'T put filament voltage into an unknown pin
to see if you can get a glow.

Get a manual and diagram, and do justice to that fine old rig.

If you can't find one commercially, and no kind soul will provide one
gratis, e-mail me an I'll journey off to the photocopy shop when I get
the energy.

Remember: THIMK before you louse it up

Tim,

Just checked the diagram, and its pin four of the 12 pin jones plug that carries 12.6v to the "filament ladder". The ladder is complicated since there are both 6 & 12 volt tubes in the rig with differing heater current requirements.

Also, the VR tube, which you said has no markings, should be an OA2

Like someone said, check the power with voltmeter on the 117 supply terminal strip

You got more guts than me, diggin into that rig without a roadmap.

Good Day,

I've got hundreds of tubes that I've just got to get rid of ASAP and would prefer to sell the lot. Most of the sweeps and HP amps are long gone yet there's gold mine remaining for the person who's got the time and patience to piece them out. I sure don't.
I also have over 200 early Sam's CB Photofax manuals as well as a few thousand, Sam's TV Photofax manuals back to #200. All in good condition.
Not interested, that's ok but I'll be willing to pay a hansom "finders fee" if you know someone else who might be interested.
I need to get rid of this stuff and the keyword is "CASH" so be serious with me and I'll be serious with you.
Just drop me an email as I'll not be responding to board requests for info.

Thanks, Charlie

2488. HQ-170 for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-14 00:00:00 UTC

HQ-170 for sale. It is in good condition, clean, complete, working clock, restored, mostly aligned and copy of manual. The only problem is one of the transformers has bad condensers across the windings. Two fixed condensers will fix this. The reciever is aligned from that point on. I am asking $150 for it. E-mail me directly at vincentelectronics@erols.com.

Mark

Source record: 89535

Hi David,

Darn it . . . I just sold a TR-4Cw/VFO combo that would have been a perfect trade.

FYI . . . the only thing I have available for trade at the moment is an Omni D transceiver with 243 external VFO, and Ten-Tec 252MO 20amp power supply. Its a vy good broadbanded rig with 100 wattts out even with a 2 to 1 VSWR -- unlike the Japanese rigs with turn-down reflectometer circuits in the driver stage. And, of course, since it's Ten-Tec it has super QSK and excellent factory service.

You HAVE to check out this file system for qsl cards. It beats keeping your cards in an old shoebox hands down!

This thing holds and displays 400 cards. It hangs on the wall and is really slick. At 25 bucks it's a steal. Whenever people see my cards displayed in this thing they are really impressed. I got one at the breezeshooters hamfest last year and paid over $40 dollars.

I have no financial interest in this guys operation at all. If you QSL, you HAVE to look at this!

In article <79e7ma$7pr$1@msunews.cl.msu.edu>, kh34@hotmail.com says...
> Would you go with either of the Shack antennas for this model, or would you

No way. You can MAKE a shortwave antenna for next to nothing.

1) Get as much wire as you can.
2) Mount it as high as you can.
3) Have fun.

Really. That's all. Run it around the room. Run it across the yard. Throw it in a tree. Drop it out the attic window.

As for the radio end, if you have an external antenna connector on the radio then find a plug that fits and solder the antenna wire onto it. If you don't, then use an alligator clip and clip it onto the built-in antenna.

About active antennas, sometimes they help, sometimes they hurt. They will amplify the noise as well as the signal and sometimes put too much signal into the front end of your radio. If you really want one you can MAKE one for about $0-10 depending on where you get your parts (new or from a junkbox).

Try http://www.ee.washington.edu/eeca/circuits/activeant.html

This one looks just like a device called the "TinyTenna" that some guy on the web is selling for $20. Some people like it, some hate it. I don't know the TT website URL. I don't know from Tinytennas, but I won't pay $20 (plus $5 shipping) for something I can make myself for FREE or close to it anyway. The only thing a guy might not have would be the MPF102 transistor.

I've seen this curcuit in magazines too. It's actually an impedence matcher. That makes sense. A random-wire antenna has a very high impendence. Your radio has a very low impedence (50 Ohms). If you can match them you'll get more signal power into the radio.

Also check out the rec.radio.shortwave newsgroup. Just don't say "tinytenna". Some jerk has been spamming us with hundreds of testimonials and other crap.

I recently picked up a Heath CR-1 Crystal Receiver set at a hamfest. Any readers who could answer questions I have?

Thanks for reading.

2504. Re: Plenty of Tubes !!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-14 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <36C6D1BD.F7668B16@ix.netcom.com>
Source record: 89549

Charlie:
Trouble with buying unknown tubes is,
your run the risk of a serious "pig in a poke."

A thousand NOS tubes are worthless if those tubes
are 3CZ5s, 17BS11s, 1B3s and 8GH8s.
You can't give them away. The European folks
might take them if you help pay shipping.

If you want a serious buyer, you've got to list what you have.
Otherwise, 10-15 cents a tube for unknown tubes IS a serious offer!
I've bought thousands at a time at that price and gleened
perhaps a hundred that were worth my shelf space.
I tried giving away the rest without success.
Now they go to the dump.

Sorry, but you gotta take your choice...
Let them go for peanuts or do the work of listing what you have.

Good luck with it,
Dave Stinson AB5S

I have an RCA Series 700 UHF repeater. I
am looking for a a service, shop manual for it.
I need information for tuning up the RX/TX sections
and basic controller wiring (RX/TX audio, PTT and
REC COR) tap off points, for my external (CAT 300)
controller.

If you have such a manual for sale, or could copy
the appropriate sections and mail or fax them to me, I
would gladly pay for these services.

Thanks;
A-American Inc.

From: Travis Martin <travism@door.net>
Message-ID: <7a6rpm$1sb$1@remarQ.com>
Source record: 89557

I have a W.E. 1KW AM broadcast transmitter; I forget the model number but think that it is 443D...I'll go look after while if anyone wants me to...

I posted it on this ng a few months ago and got an enormous number of responses but apparently I was unreasonably high on it.

I have been swamped at work (broadcast stn) and am just now coming up for air; I really need to move this beast. A decent offer will take the transmitter and the spare tubes that are with it.

It is an art deco masterpiece...looks like it belongs in a 50's era science fiction movie.

Travis

2513. Mystery Transmitter

Its amusing to be told that " I have no right to comment about the
price someone asks for his old ham gear ". Question : Those that
complain about those who make public statements about the price of
something , are they not doing the same thing they say one should not
do.. Perhaps there , shall I say unable to recognize that what
they are complaining about is what they are doing ..

A dealer has the right to ask any price for his gear ... all of us
who desire have the right to comment about the price .. this is a
public forum....

I did receive a few nasty emails , most very immature in nature with
the normal comments but the vast majority were supportive.

Source record: 89570

I own a small number of various boatanchors - my Heathkit HW-101 cost me under $200.00 in excellent condition and about a year ago (I've had mine for about two years) I saw another go for over $800 on e-bay. My Ameco TX-62 cost me under $90 and another went on e-bay for over twice that. My WRL-Globe Tech-ciever TC-6A 6-meter unit with power supply cost me $20 and yet someone had one for sale for $140. All of my BA's were purchased in excellent to mint condition - people price items according to thier individual feel of the market and bid or buy those items according to individual need or worth. The VFO - 621 for my Ameco TX-62 cost me twice the cost of the transmitter but I felt it was worth that amount. My 5-minutes worth. Bill.

I have some very nice recent arrivals for sale. All are tested on my TV7B or B&K 747 and are new in original boxes unless noted otherwise. Here's the list:

(2) EL-38/6CN6 Mullard, test new but ??, white box $12.00 ea.

(1) 1L6 GE, new in white box $24.50

(1) 12E1 Mazda, used, very good getter, excellent print $9.50

(4) 6CA4 Mullard or Amperex, used but test new $7.50 ea.

(4) 1629 eye tubes, various mfrs., white box, (2) new @$4.00 ea. (1) good used @$2.50, (1) fair free with the first purchase of any 1629 listed

(1) VT-62 (801) Hytron, brown base, original box and innersleeve. $93.10 at AES, my price $69.50

(2) 6L6GC GE, new, original GE boxes $19.50 ea.

(6) 12AX7A branded "Hytron", but really Yugo Telefunken copies, smooth plate, nice tubes but definitely relabeled $5.00 ea.

(2) 6939 Amperex USA, rare frame grid tetrode tubes, new, white box $22.50 ea.

(1) 6227/E80L Amperex PQ, NIB, hard to find, $29.50

(2) 7199 Sylvania, one in white box, may be SLIGHTLY used hard to find $19.50 for new, $14.50 for the white boxed tube

(5) 7788/E810F Amperex gold pin, 3 are in older white boxes and are definitely new, 2 test new but appear to have very low time on them. These are the tubes written up in the recent issue of Sound Practices $29.50 new, $22.50 for the slightly used

(2) EF804 Telefunken, diamond base excellent print, may be new but ???, white boxes $19.50 ea.

(1) 6084 Amperex, super quality EF86 sub $29.50

(4) 5Y3GT Tung-Sol $12.50 ea.

(2) 5R4WGA Chatham "potato mashers", new in original boxes $11.50 ea.

(1) 5R4GY Brimar, very nice quality new tube, white box $9.75

(1) GB5931 Sylvania heavy duty 5U4, white box, test new $18.50

(8) EZ80/6V4 Amperex Bugle Boy, new tubes, bulk pack so no original boxes, pin compatible with EZ81/6CA4 but lower current (90 ma. max) and voltage (350 volts per plate) rating, nice tubes. Will sub for 6CA4 IF your gear doesn't need the higher ratings (draws .4 amps less heater current too). A few available boxed examples available @$5.75 ea., bulk are $5.25 ea. or 2/$10.00

(12) 5879 Tung-Sol (!), input pentode, great quality tube $7.50 ea.

(35) 5U4GA/GB Sylvania or GE $9.75 ea. SPECIAL! 2 for $18.00, 6 for $48.00

(Many) Excellent used 5U4GA or GB tubes, all good US brands. All test new or near new (>55 on my TV-7), all are nice tubes with lots of service left. $4.50 for RCA, $3.50 ea., or 4 for $11.50 for other brands.

(Many) 5Y3GT used, US brands, test near new, $2.25 ea.

(Many) bulk pack good used RF tubes-6BE6,12BE6, 6BA6, 12BA6, 6AU6, 6AV6, 12AV6, 6AL5, 12AL5, various brands, tested, guaranteed no duds. Stock up now!! $.35 ea., or 3/$1.00

Even A Few Parts!!

(2) 40+4uf dual section polypropylene/oil caps, round metal cans about 2.5x4 inches, .250 quick connect terminals. These are rated at 370 volts AC, so they should be good for at least 525 dc. I've tested them with no signs of stress at over 700 volts. Typical "dual-rated" AC/DC oil caps like these are DC rated at about 2.5 times the AC voltage. Great power supply caps for many amps! $5.75 ea.

(43) Dale RH-5 1 ohm, 5 watt aluminum housed wire wound resistors. Typical Dale quality gold color housings, 3% tolerance, new prime parts. These go for $2-$3 each new, my price is $0.45 each, or 12 for $5.00 Excellent for filament dropping resistors, etc.

Priority Mail shipping up to 2 lbs. is free on orders of $50.00 or more, otherwise add shipping of course (usually $3.50 for USA). Insured shipping is slightly more. Please e-mail me if interested. Thank you very much.

2530. Drake restoration questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-14 00:00:00 UTC
From: Will White <wcw@asu.uswest.net>
Message-ID: <36C72E35.ABB55FF9@asu.uswest.net>
Source record: 89575

Hi--

I have a TR-4 and a B-line that need a few things to put them in more acceptable condition:

1. Is there a reasonably safe substance/method to employ in order to remove chassis corrosion on the 4-line? I want to avoid removing the black screened lettering at the tube sockets.

2. I lost two of the four spacers for the front panel on my TR-4. Can someone tell me the material used and dimesions, and possibly a ready source of replacements?

3. I have heard that a nail polish color called "Peacock Blue" is a good

match for the original Drake meter/readout filter color. Is this correct? Also, how about using theatrical or other plastic flexible filter material? Are there brands and colors to look for?

4. What colors/makers of spray paint are recommended for repainting the 4-line cabinets?

5. Where can I get exact, or very close replacements for the multi-section electrolytic capacitors in the AC-4 power supply?

Hi--

Can someone tell me the nominal impedance values for both microphone input and headphone output on the Drake TR-4 and R4-B/T4X-B?

Also, has anyone used the lettering/decal kits sold by Antique Electronic Supply on the 4-line? What other, perhaps better, more closely matched suppliers are there for this item?

2537. FS: Harris 1KW transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-15 00:00:00 UTC
From: Peter Gottlieb <peter_gottlieb@email.msn.com>
Message-ID: <OWqr1RSW#GA.250@upnetnews05>
Source record: 89382

For sale, in 4 foot aluminum rack with wheels:

Harris transmitter set consisting of:

RF-110A amplifier
RF-124 power supply (240VAC 1 Phase input)
RF-131 exciter
RF-551A pre/post selector
RF-601A/C antenna tuner

also includes:
RF-601 outdoor antenna tuner unit
70 foot interconnecting cable
Spare RF-131
All manuals

This unit is good for 2-30 MHz continuous coverage at 1KW continuous output. (With Harris, continuous means continuous.) The exciter will do CW, USB, LSB,
ISB, and AME and is settable via thumbwheels or through the remote interface (this option IS included). This makes it is easy to build an interface to your computer,
if you're into that kind of thing.

The amplifier takes the 200mW output of the exciter and brings it up to 1KW using
a pair of 4cx1500B tubes. This is why it easily runs continuous full output. The
power output is internally monitored and regulated, so once set it is stable over long
periods. Amplifier tuning is automatic when used with the RF-131 exciter, via band-
switch otherwise.

The antenna tuner will automatically tune a vertical over the entire 2-30 MHz in a couple
of seconds. It also will tune into a long wire, or a dipole if you use a balun. I built a
heavy duty balun which I will include if you need it (anything wimpy will arc over).

The entire setup is integrated so that you set a frequency, key the mic, and the auto-
tune cycle starts. The transmitter unkeys in a couple of seconds and you are all
tuned up and ready to go.

This is more of a ship anchor than a boat anchor. The full rack probably weighs
on the order of 500 pounds (at least that's what it feels like), so this must be a
pick-up (!) only item. Shipping would be insane.

This setup works and is in very nice condition. It looks quite impressive. The
amp and exciter internals slide out on rails for service and the amp has all sorts
of interlocks as you would expect in a commercial/military unit.

I would like to sell it before April, as we are moving then.

I am looking for $3000, and live in Dobbs Ferry, NY.

Need to move this stuff or at least a portion of it this weekend.
so if you are close enough to Jackson, Michigan...let me know, as i need
(especially the xmitter) the room...can email pic's of most everything listed.

I have some broadcast equipment for sale. may need minor work...or may not.
will be pick up only due to size of equipment...

Consoles: all are mono....
Sparta 5 channel $50, *missing 2 pots and jack from front panel not the main
panel.
*(headset volume & monitor volume & jack)no p/s,
QRK 5 channel appears complete inside and out- $150 no p/s,
Gates tube 'Yard' 8 channel w/ power supply....$250

cart machines...$75 each
Carts available for above...$4.00 each with purchase of machine...

Audimax III ALC (SALE PENDING), Audimax 4440 ALC (SALE PENDING), Volumax 400 APC
(SALE PENDING)....all rack units
$100 each

Gates BC500T xmitter..(SALE PENDING), it is now set for 1480KC is 500 watts.
was the old back up unit that was no longer needed...
uses 3 833A's, virtually (may be missing minor stuff, ain't they always)
a complete unit, all the major stuff is there. I have all tubes for it.
2 of the 4 meters need new glass in them. cabinet in average shape.
inside will need the usual 'dusting' out...
I also have the schematic for this unit...
would make a great 160 meter rig for those who like that.
sorry, this is a pick-up only unit....in Jackson, Mich. 49202. $400

I also have the matching phaser for the above, it, I believe is Not all there,
but then i have never seen the insides of this type unit before either..

email me if interested in any of the above, or call at 517-789-8702...
if you get no answer I may be on the internet
(only one line here for now and don't know how to disable call waiting.)email
me..

I had many who wanted the xmitter, but so far nobody has showed up yet...
thanks for reading this post...
Robert

To all,

This message is being sent to several lists.....

Tonight on PBS - 1909 Radios: Rescue at Sea

"Wireless Telegraphy saves lives after two ships colide."

The New England Wireless and Steam Museum is on TV!

WGBH, the Boston PBS station, filmed scenes for [today's] February 15, 1999 "American Experience" at the NEWSM. This show tells about the collision between the ships Republic and Florida in 1909 and how wireless played a part in saving 1,500 lives.

The mockups of the wireless stations were built at the museum and the musuem's equipment was used for props. The show is on [today] at 9:00 PM "The Americal Experience," locally here in New Jersey. Wireless Telegraphy saves lives after two ships colide.

Museum web page - http://users.ids.net/~newsm/

>From K2TQN:
This Museum is a wonderful place to visit. It's just 5 minutes off of 95 in Rhode Island. You can spend quite a bit of time here. Try visiting via the web first.

Hi all,
Recently I have been cleaning out the tool shed and uncovered some old radios I have been saving for a rainy day and wish to gain more knowledge about them, re-tube them and get the aprox $value of them. Is there a general all-purpose WWW site I can look up most any radio from the 30's to the 50's?

So far I have tried dozens of sites but haven't found any data on my radios listed here:

1936? RCA Victor model 242-console
1950's? GE #c327 (radio & turntable)
1950's? Philips type 92 (or maybe 924) wooden tabletop
1950's? Marconi (bakelite) # 271
1950's? Northern Electric model 5002 (bakelite)

i don't think so...

51 was used for a wide variety of receivers (such as 51RV being an aircraft nav receiver...)

i don't know if you can get to the equipment type listing from the outside..start at http://www.collins.rockwell.com and see if there's an entry for that. (or check the publications indexes that are available from there...)

Actually, Bob, the Viking II is very well shielded and TVI-suppressed. Put a lowpass filter on it and it is probably cleaner than the latest Yaecomwood.

2554. HT-32B Questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-15 00:00:00 UTC
From: Robert Kerr <robert.kerr@gtri.gatech.edu>
Message-ID: <36C8E3F3.48B7CE8A@mindspring.com>
Source record: 89399

I just bought an HT-32B. I am sure it's a -B model, as it says so on the front panel, and it has the 1 kHz tuning window and bandswitch window. It's going to need some work, and the appearance of the knobs raises some questions with me.
The bandswitch and main tuning knobs have been replaced with non original types. The rest of the smaller knobs all match each other, but do not match the "scalloped" style knobs on my SX-115. Instead, they look like the cone style knobs that were on the HT-40 and SX-140 I used to own, except they are black. They do seem to have the appropriate skirts, with the right markings. I've looked at all the web pictures I can find, and it's hard to tell, but it appears that the knobs in the pictures are scalloped.
What do you gurus know? Are these correct? Have I gotten a hybrid, with knobs taken off an earlier/later unit?

Last but not least, will anyone sell me the main tuning / bandswitch knobs I'm going to need?

Bob

Hi Bob,
What you have is the earlier version of HT-32B. The early SX-115 comes with the same cone shape knobs. I have two HT-32B's and one has a cone shaped knobs. If you are looking for the Main tuning knobs,try HT-37 knob , gray color which seem to be easier to obtain. Of course, you have to paint it with black.
Good luck to you.

Source record: 89404

Well, I'm sure no Yaecomwood fan, but I am of the vintage of the Viking I, II, and other misc Johnsons. My mind is failing but in that dim distant past I seem to recall a LOT of TVI problems with those rigs.

However, as you say, if you shield and ground the case, add a good LP filter, plus a HP filter on your own tv, you can often pretend you have no TVI

My point, should have been that the Vik II was not a particularly great rig, and would be worth FAR less than $500 to most hams. IMHO, a Ranger or Ranger II a better investment.

Meanwhile I continue to collect Swans and Gonsets, though lately I find trouble trying to determine where to plug in the key, the mike, and the ac plug.

Old Age aint what its cracked up to be.

Source record: 89514

I have an extra Heath HW-99 "Novice" cw XCVR I am contemplating selling. The rig has been in use for 10 months now and works well on its' four bands-- 80, 40, 15 and 10 meters. This is an all solid-state , 35 watt output, CW xcvr from the mid-80's. I THINK it may have been the last "Novice- type" xcvr Heath sold. It has it's own power supply built-in. All you need is the key and aerial. The only
"glitch" is I do not have a manual for it, but can supply a copy of the schematic
diagram. I DO NOT have any of the matching accessories for this unit. The only changes I've made is in the vfo circuit to improve it's stability. To be totally honest,
it's lacking in this department but maybe someone out there knows the secret. I have two of these things and they both drift a good bit until they warm up. Asking
$200 plus shipping from 37617. Equipment sold AS-IS . Contact me at k4ejq@juno.com if interested. Tnx and 73, Bunky, K4EJQ

Try "W7FG Vintage Manuals". He's got them all. Re your 6900, there are a number of them out there. Its the speakers that are devils to find. If you have a speaker, it may well be worth more than the receiver! The R-40-series Hallicrafters speakers go for a lot, but the RME can't be found. You can (sort of) date your particular receiver by the type of dial lamps. If they're the round ones with two pins, its probably an earlier one. The later ones use the standard, bayonet #47 lamps. Oh yeah, Brasso does a nice job on the tuning knob.

Vic Link News wrote:
>
> Looking for PRC-70 in good, operational shape. Please reply via email
> n7gsu@qsl.net with condition, accessories, price. I am serious buyer and
> will pay premium price for right unit.

I have an AN/PRC70 with the accessory bag containing
the long-wire antenna kit, balun kit, H250 handset, M80
Microphone, Headphones, and both the 6-foot and 9-foot
whip antennas for this unit. I also have the whip aantenna
spring mount adaptor.

Note that the AN/PRC70 whip antennas and spring-mount
adaptors are unique to the AN/PRC70
and are NOT the same, nor interchangable
with, antennas used on other types of tactical FM equipment.

I can also include a low-voltage cutoff unit that is
used to disconnect an external battery pack if the
input voltage drops below 22 volts. These sets are sensitive
to low-voltage (as stated in the operator an maintenace
manuals, so I ordered a low-voltage protector from NewMar
That I use with this unit.

I do NOT have any of the original battery packs, but I
do have the external DC power cable and I run mine via a pair
of 22AH garden tractor batteries that are in series
for 24 volt.

I also have the Maintenance manual for it, but do not
have the operators manual.

The unit is in working condition and have used it
both on 6 meters and on HF.

I can also throw in an "as-new" condition
Shakespeare wide-band mobile antenna with
base and angled mounting bracket. The mounting
bracket is the type used on the M880/M890-series
Pick-up truck type of army vehicles. The
antenna is CARC-green and model # 4242-MK1 and specs
can be found on Shakespeare's webpage:

<http://www.shakespeare-ef.com/military/4242-MK.htm>

My radio has a label on it stating "repaired and checked
out" by Jim Karlow.. he is apparantly knowledgable

about the PRC70-series radios and has the test
fixtures and support equipment to repair/overhaul
these sets. Jim also has the ability to ADD lower
sideband to the PRC70 so that you can have both
upper or lower sideband selection capability.
I chose not to have LSB added as it would be
a modification to an otherwise original set.

I am asking: $2600.00 which is what I have invested
in this unit. It is NOT common to find the accessaries
and the accessary bag for this unit, let alone find
the original 6 and 9 foot AN/PRC70 whip antennas.

The reason I wish to sell it is that I have upgraded
to the new Motorola MICOM-2R, milspec set and the
MICOM-2R is designed to run ARQ modes. The AN/PRC70
is NOT designed for ARQ. It does have built-in FSK
capability however but the shift is either 425 or
850 Hz (don't remember which) , and not 170 Hz.

Trish

2589. FORSALE - MINT Kenwood TS-520S w/CW filter, mic, MFJ tuner

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-15 00:00:00 UTC
From: jpl@hoserve.ho.lucent.com
Message-ID: <7aa0sj$5gg@nntpa.cb.lucent.com>
Source record: 89531
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,nj.forsale,rec.radio.amateur.boatanchors

I have a mint Kenwood TS-520S that I would like to sell.
In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Hey Boatanchor Guys,

Y'all have come through in the past for parts and paperwork, etc. just thought I'd toss this one at you.

Anyone have any older but working CB radios with microphones or mag mount antennas?

Trying to complete a communications cache closet for Scout campouts, etc.....

I'd do it in 2 meter stuff but I'm the only ham.

Sorry for the off topic but it's for a worthy cause. Give me a shout with what you have and a price. It will all go to good use.

Thanks...73...Rick...W5RH

Tom,
I have one, but not interested in taking the time to copy every page. If you want to borrow it and make a copy, I'll send it upon receipt of a deposit of $50, which I'll return when you return the manual. By the way, have you tried Zenith? The manual is RA-105, Sept. 81. I have one of them, and it is unique. Too bad digital radio's came along.

Source record: 89418

I'm selling my personal Hallicrafters SX-28 Super Skyrider. I am neither a dealer nor am I selling this as a broker. I've owned it since 1962 and it is in great condition--a table radio with the full metal case and not a rack mount radio. I've posted several pictures of it on the auction page. I'm selling it because my XYL and I are building a new home and there just won't be room for it--or an antenna. Bummer.

You can find it at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&Item=67741617

The auction started on Monday night, Feb. 15 at about 10:30 p.m.; it ends on Monday night, Feb. 22 at the same time.

The SX-28 is a great historical radio. If you've ever been to the Harry S Truman library complex in Kansas City, MO, they have a life size replica of the oval office as it was in Harry's time. Right there behind the President's chair is a perfect SX-28. This was THE radio during World War II and thereafter.

Thanks for taking a peek.

I just wrote up a description of my IF transformer adventures. And captured a jpg picture of a Ktran chassis mount IF transformer disassembled. Showing the cup cores, and where to find the wafer caps. This should also be of interest to boatanchor radio collectors....

Also just had to replace one of those "grahm cracker" resistor/capacitor wafers of the audio section of an AA5. Leakage between the 50C5 grid and 12AV6 plate. Never seen one of these go bad before.

And I thought IF transformers never go bad.....

2606. RFI: Signal Corps speaker LS-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-16 00:00:00 UTC
From: C.Wright@dera.gov.uk
Message-ID: <7abehd$2hk$1@trog.dra.hmg.gb>
Source record: 89421

Greetings from the UK!

Last Sunday I went to a local amateur radio rally ("meet" or "hamfest", I guess) where I bought a Signal Corps loudspeaker in very good unused condition. However, before using this beauty, I need some information.

The speaker has a plate on the front with the following information on it:
"Signal Corps Loudspeaker LS-3
31907 CG 35924-Phila-43"

and it has the familiar red-paint stamp saying
"SC 9358" and "MFP".

Inside the cabinet it looks like the day it was made. It is paint-stamped "Operadio Manufacturing Company, St Charles, Illinois".

The internally-mounted transformer is ink-stamped with the following info:

"9058"

and the loudspeaker with

"6-9058ABA6" and "SC 6406 P".

The front panel is fitted with a jack socket, type SK-33A, and is a ring-tip-sleeve stereo-style socket.

Unfortunately this doesn't seem to be a standard 1/4" socket as that size of plug won't fit.

So to bring this to life I need to know:

a) what is the input impedance to the transformer?
b) where can I get a jack type JK-33? (I don't want to modify this if at all possible)

Any info gratefully received.

TIA

Saw and tape it. What an excellent program!

The only part of the program I didn't like was the fact the actor who played Jack Bimms didn't know CW and sent jibberish on the key. Furthermore, they played static through the headphones on the receiver but never played CW. Spark CW produces a very distinctive sound and it would have been great to let the public hear it.

Still, over all it, was very good and well worth watching.

About 1500 people were saved. Mr Bimms testified before Congress to change the Wireless Rules and Regs only to be politely ignored -

1500 people would perish three years later on the Titanic.

-B

If you like this type of high seas adventure.. read "Wake of the Wirelessman" - it's pretty good too...

Hi! I'd like to pick up a copy of the manual for the Mirage A1015 6M amp. This is not the new, A-1015G flavor, but the old, original A-1015 (with just a power switch and preamp switch on the front). In lieu of that, the pinout for the accessory connector on the back would be a great help.

I've already checked with several of the "Vintage Manuals" shops, with no luck.

Thanks,

Paul WD8DKY

In my opinion, the 520 and 520S are
some of the best rigs around and would make a
fantastic beginner station or a great backup rig.

For any novices not familiar with this radio, it is all solid state
(discrete components, so its very easy to repair if ever needed)
except for a tube driver and a pair of very
robust 6146 tubes as the finals. It has a builit in power supply,
but can also run off of 12VDC with an optional DS-1A
DC-DC convertor (not included). It also has connections for the
Kenwood DG-5 digital display.
It covers 160,80,40,20,15, and 10 meters in CW and SSB (upper and lower) modes.
The receiver section is excellent and I always get excellent audio quality
reports. Many folks say that these older Kenwoods are some of the best
sounding rigs on the air.

This rig also has the optional 500Hz CW filter
installed (genuine Kenwood option). Also included
is the Kenwood hand mic and (if you need it) an
MFJ antenna tuner (I forgot model no - older unit
but works fine).

The price is $350 firm + shipping. You might find one for a few $ less,
but NOT is this great condition.

Hi all,

The Florida is shown with an antenna leaving Italy. Why wasn't their Sparky pounding for he's worth as well? What about the flare bombs on the Florida? No wonder nobody cared when she pulled into port!

Chaz :-)

Surely not at the same time?

Incidentally, I found a '9-Pin Miniature Tall Test Socket Adapter'
Model 1449 by Pomona Electronics of Calif. It extends the valve base
of an awkwardly placed B9A valve base out by 5.5cms with a base on
top for the valve and nine tags to connect instruments to for
measurements. Do you want it?

2627. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-16 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7actdu$r5l@news.Hawaii.Edu>
Source record: 89442
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, WH6U, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your

article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

You've got the standard speaker for the SCR-299/399 (et al) comms setup. The input Z of the system is 600 ohms. The plug you need is not the standard stereo jack (unless its not original!!). Rather, its a PL-68, the same plug for the mic on Drake "C"-line or Collins S-line, or for that matter, ever carbon mic used in WW2. I've seen them posted as B-17 bomber speakers, but that's a bunch of bull. If you have access to the WW2 issues of QST, you'll see the 299/399 systems in Hallicrafters ads. Mounted on the wall, you'll see these speakers. Regards de K3HVG

My Fed. agency received some of these on a low-bid. We had a 95% rejection factor, due to complete lack of emission consistency and low output at on HF. As I recall, the best we could do was about 50 watts output from a pair! Using Fed stock, we get a consistent 100+ watts. I'll say no more!.

I bought a Chinese 6146 tube for a project--when I attempted to put the plate cap connector on, the cap came unglued from the tube. Don't know if this is typical or if there's more than one Chinese maker of 6146s, but it's a data point for you.

Joe:

That posting brought memories. I was (am?) WPE2HKG. Even had a neat little plastic sign with my WPE call sign on it. Remebered the thrill when I submitted some sw loggings, and my name and "call sign" were printed in Popular Electronics. I think I saved one of those issues from the 60's.

I have a COMPLETE SET of QST magazines from 1980 through 1994
(15 years, 180 issues!) that I need to sell. I'd love to
keep them but just don't have the room. They are in very
good condition. This is a fantastic resource for anyone who
is seriously interested in Amateur Radio.

I am now taking bids on them. I will only sell as a complete
set, buyer picks up (NJ) or pays shipping. I'm thinking that
the minimum bid should be about $180 (ie, $1.00 per issue).

Please respond if your interested.

Thanks.

I missed the original WPE callsigns in Popular Electronics. I think it was Hank Bennet who was administering the WPE program for the magazine. After the change in format in Popular Electronics in the early 1970's, Hank Bennet continued with the program with the new prefix of WDX.

Does anyone recall (about 20 years ago) a series of articles in any of the ham magazines that gave
modifications for the HW-101? There was even a digital readout display that could be built into the rig
and the display fit into where the old tuning dial once resided. I cannot find any of this information in my
archives and I would like to know what magazines they were in.

Thanks!

Cross-posted to:
rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc,nj.forsale,sci.electronics.repair,rec.radio.amateur.homebrew

I have a pretty large variac transformer that I'd like to
sell. It's 7"diameter by 4"high, weights about 25lbs, in
excellent condition. It's marked as follows:

General Radio Co type V20H
"Volts shown for 8amp 0-270V 50-60Hz"

I assume that refers to the fixed voltages between
the various taps. It has 7 terminals; 1 terminal for
each end of the winding, 1 variable slider, and 4 fixed
taps for various fixed voltages.

This thing is quite substantial. I don't know what it's worth.
If interested, make me an offer.

Thanks,
Joe
KB2FSH

PS - I also have a couple of smaller ones. If your interested let
me know and take a look at them for the specs.

Hello...
I am buying a couple of 12volt 1200MAH batteries for my
Yaesu FT-530 handheld.Aftermarket..
When I bought my radio I got a battery charger #NC-18B which
will charge at 14.5volt 50MA... I know that this charger is good
for the 12v 600ma batteries that I first had but is it still good for
the newer stronger batteries??????
is the charging time just doubled..???
The charge time for this charger is 15hours for the 12v 600ma..

these batteries are now only available through Yaesu for twice the money
as the newer batteries.....
Please advise..
thanks in advance.
Bob

From: hammarlund@acd.net
Message-ID: <36cb5097.33736935@news.acd.net>
Source record: 89356

Hi all;
I have this mic I had it rebuilt by Astatic, and they also made a custom base
for it. it is done in broadcast quality sound w/ 500-600- ohm impedance.
I used it on my FT-525RD until i sold it last year...
have 4 jpg's of the mic (in zip form), i can e-mail...then you will notice the
custom base
which at first glance looks like the night eagle base, except:
1. it has chrome squeeze & push bars
2. the squeeze bar is on the right instead of the left. this was made this way
for proper head alignment, by Frank at Astatic, the base is amplified...
asking $200.00

Sounds like a lot of money...BUT IT is a lot of mic quality in sound...

2669. Re: EICO 753 VFO Drift, again

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-02-17 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.990217223618.11237D-100000@Ocean.CAM.ORG>
Source record: 89359

It was Bry, AF4K Bry <bry@NOSPAM.mnsinc.com> who was looking for the article(s). He posted twice in January about it. What's interesting is that he was sure he'd seen some articles years ago about the drift problem, and was hoping someone could supply a date. He got a few replies, but they were all vague (year, I saw the same thing).

A few weeks later I found the only article that I remember, and posted the date. I went on to add that there were some fairly worked out rules to fixing drift in VFO's and he might do well to simply follow them since nobody seemed able to come up with a specific date for an article specifically about the 753's drift problem.

My post which reopened the thread seems to have come up with some useful pointers from other people. I don't think I've ever seen a 753 in person.
